III	Control statements: Branching - if else statement, Looping, nested control structure, switch statement, break statement, continue statement, comma operator, go to statement. Functions: Overview, function prototypes, passing arguments to a function, recursion. Program structure: Storage classes, automatic variables, external variables, static variables, multi file program, Library files, Header files.	12	20%
IV	 Arrays: Defining an array, passing array to functions, multidimensional arrays. Strings: Defining a string, Null Character, Initialization, Reading, writing and processing a string. Structures and unions: Defining a structure, processing a structure, user defined data types, structure and pointers*, passing structure to function*, self-referential structures*, union. 	9	20%
v	Pointers: Fundamentals, Declaration, Passing pointers to a function, pointers and one dimensional arrays, dynamic memory allocation, operations on pointers, pointers and multidimensional arrays, array of pointers, Array of strings, pointers and variable length arguments list, passing functions to other functions.	9	20%
	SECOND INTERNAL EXAMINATION		
VI	 File Handling: opening and closing a data file, reading and writing a data file, processing a data file, unformatted data file, Random accessing. Low level programming: Register variable, bitwise operations, bit fields. Additional features of C: Enumeration, Command line parameters, Macros, C Preprocessor. 	9	20%
	END SEMESTER EXAM		
	QUESTION PAPER PATTERN		
There will b	be two parts in the Question paper - Part A and Part B.		
choice ques	I have 8 short answer questions of 3 marks each (8 X 3 M = 24 stions. I have 6 essay questions one from each module of 6 marks each $\frac{1}{2}$		

Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in **Part B** to be limited to 2.

The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan.

*May be covered after Module V

	END SEMESTER EXAM QUESTION PAPER PATTERN		
VI	 Introduction to single board computers - Arduino - architecture - Introduction to Arduino environment. Writing simple programs for blinking an LED, Input from an external switch, fading an LED, serial monitor and debugging. Raspberry pi : Introduction to Raspberry - Architecture, versions, Software installation and configuration. Note : The last module should be taught in a tutorial session. Students should be shown actual devices. A practical assignment about configuring a PC / arduino or raspberry pi should be given. 	<u>/91</u> 4 L	10%
	Introduction of Computers - Overview of PC architecture - Basic components of a computer - PC hardware – Motherboards - Expansion boards -Specifications of Personal computers.		

There will be two parts in the Question paper - Part A and Part B.

Part A will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice questions.

Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in **Part B** to be limited to 2.

	QUESTION PAPER PATTERN		
	be two parts in the Question paper - Part A and Part B. I have 8 short answer questions of 3 marks each (8 X 3 M = 24)	M). There	e will be no
choice ques	-	,	
Part B will	l have 6 essay questions one from each module of 6 marks eac	h, with an	alternative
-	stion from the same module (6 x 6M=36M). The maximum	number	of sub part
questions in	Part B to be limited to 2.		

Course cod	e	Course Name L-T-I	P -	Year of	
		Cred	its In	troduction	
RLMCA11	2	Computer Organization & Architectures 3-1-0	-4	2016	
Course Obj	ectiv	es			
• To int	rodu	ce computer architecture and organization, with a spec	ial focus	on the basic	
princij	ples ı	inderlying micro-processor design.			
To exp	olore	the interaction of hardware and software, and consider th	e efficient	use of	
hardw	are to	achieve high performance.			
Syllabus	- ^		N A		
Basic Structu	re of	digital computer, Instructions and instruction sequenci	ng, addres	sing modes.	
Basic I/O ope	ratio	ns, stacks, subroutines. Basic processing unit - sequenci	ng of cont	rol signals –	
Hardwired co	ontro	1 and microprogrammed control. Pipelining - basic	c concepts	s only. I/O	
organization	– In	terrupts, DMA. Interface circuits. Memory organization	on – Cac	he memory.	
Virtual memo	ry –	paging and segmentation. RAID, Introduction to HDL.			
Expected O	utcoi	ne UINIVLINDIII			
• The st	uden	ts will acquire knowledge about the design and organizati	on of com	ponents in	
compu	iting	systems.		-

	Programming assignments may be given in any HDL like	IVI	
	Verilog or VHDL to create gate level OR Dataflow OR	A T	
VI	Behavioral level models of gates, multiplexer, adders, flip-	10	20%
	flops, registers, latches, etc. Open source Verilog HDL like	1.6.2	
	iverilog can be used. The Purpose of the assignment is to		
	introduce the students to HDL for VLSI Design including		
	Processor design. No detailed teaching of HDL is necessary.		
	The students can be given a basic tutorial write up on gate		
	level modelling.		
	END SEME <mark>ST</mark> ER EXAM		
	QUESTION PAPER PATTERN		
There will	be two parts in the Ouestion paper - Part A and Part B .		

There will be two parts in the Question paper - **Part A and Part B**. **Part A** will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice questions.

Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in **Part B** to be limited to 2.

The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan.

There will be two parts in the Question paper - **Part A and Part B**. **Part A** will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice questions.

Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in **Part B** to be limited to 2.

The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan.

012

Course code	Course Name	L-T-P - Credits	Year of Introduction
RLMCA231	Database Lab	0-0-4-1	2016

Course Objectives

- To familiarise the functionality and support provided by commercially popular RDBMS
- To know its use in meeting data storage and organization requirements.

Syllabus

This is a companion Course for the 'RLMCA303 Database Management Systems' theory course.

Expected Outcome

The student will be able to:

- i. Understand, appreciate and effectively explain the underlying concepts of database technologies.
- ii. Design and implement a database schema for a given problem-domain.
- iii. Normalize a database.
- iv. Populate and query a database using SQL DML/DDL commands.
- v. Use any popular RDBMS for data access and updating.

References

- 1. Text Books prescribed for theory course 'RMCA303 Database Management Systems'
- 2. Nilesh Shah, "Database Systems using Oracle A simplified guide to SQL and PL/SQL", Pearson Education, 2nd Edition.
- 3. Benjamin Rosenzweig, Elena Silvestrova, "ORACLE PL/SQL by example", Pearson Education, 3rd Edition.

Web Resources

- 1. mySQL (http://dev.mysql.com/doc/refman/5.7/en/tutorial.html)
- 2. MongoDB (https://university.mongodb.com/courses/M101P/about)
- 3. Hadoop
- 4. HBase-(https://hbase.apache.org/book.html#shell, followed by https://hbase.apache.org/book.html#shell_exercises)
- 5. Apache Hive (https://cwiki.apache.org/confluence/display/Hive/Tutorial)
- 6. Pig (https://pig.apache.org/docs/r0.7.0/tutorial.html)

Suggested MOOC

- 1. SQL(Stanford University) (<u>https://lagunita.stanford.edu/courses/DB/SQL/SelfPaced/courseware</u>)
- 2. Databases (Stanford OpenEdX) (<u>https://online.stanford.edu/course/databases-self-paced</u>)

Exercises

The Students can do their practical in the following areas in any of the DBMS like MySql, Oracle, MongoDB etc..

1. Table Design- Using foreign key and Normalization

2. Practice SQL Data Definition Language(DDL) commands

a. Table creation and alteration (include integrity constraints such as primary key, referential integrity constraints, check, unique and null constraints both column and table level

3. Practice SQL Data Manipulation Language (DML) commands

- a. Row insertion, deletion and updating
 - b. Retrieval of data
 - I. Simple select query
 - II. Sub query (returning single row, multiple rows, more than one column
 - III. Joining tables

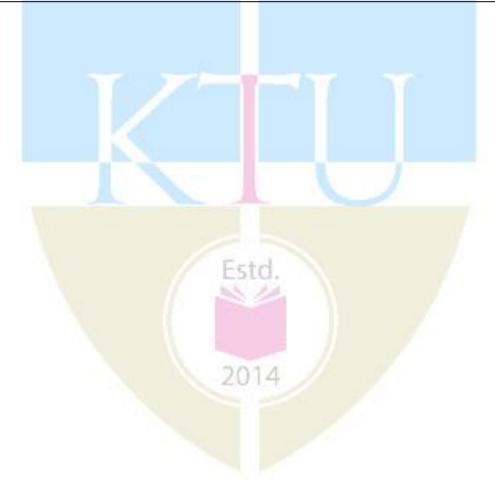

4. Practice Transaction Control Language (TCL) commands (Grant, revoke, commit, rollback and save point options)

5. Development of sample applications using Oracle/ MySql / MongDB as back end. Sample applications may include

- I. Payroll Information
- II. Student Information System
- III. Bank Transaction
- IV. Library Information System etc.

6. Develop programs using Triggers, Stored procedures

	QUESTION PAPER PATTERN		
There w	ill be two parts in the Question paper - Part A and Part B.		
Part A	will have 8 short answer questions of 3 marks each (8 X 3 M = 24	M). There	e will be no
-	uestions.		
	will have 6 essay questions one from each module of 6 marks eac		
	question from the same module (6 x 6M=36M). The maximum	number	of sub part
-	as in Part B to be limited to 2.		
The tota	l marks assigned to questions in Part A (Short answer) and Part B (H	Essay) toge	ether from a

single module will not exceed the marks assigned to that module specified in the course plan.

END SEMESTER EXAM							
QUESTION PAPER PATTERN							
There will be two parts in the Question paper - Part A and Part B.							
Part A will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no							
choice questions.							

Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in **Part B** to be limited to 2.

- 2. https://www.coursera.org/learn/cryptocurrency
- 3. https://www.coursera.org/learn/crypto2

	Course Plan			
Module	Contents	Hours Allotted	% of marks in End-Semester Examination	
1	Introduction to Cryptography : Services, Mechanisms and attacks- Phishing, ransomware, DoS attack, OSI security architecture-Network security model-Classical Encryption techniques (Symmetric cipher model, substitution techniques, transposition techniques, steganography).	8	15%	
11	 Mathematical Background:Elementary number theory: Prime numbers, Fermat's and Euler's theorems, Testing for primality, Modular Arithmetic: Congruences, Chinese remainder theorem. Finite fields: Review of groups, rings and fields; Finite fields of the form GF(p), Polynomial Arithmetic, Finite fields of the form GF(2").Discrete logarithms Euclidean Algorithms. 	12	15%	
	FIRST INTERNAL EXAM			
111	 Conventional Symmetric Key Encryption:Block ciphers and Stream Ciphers, Modes of operation (ECB, CBC, CFB, OFB), multiple encryption, Data Encryption Standard-Block cipher principles-block cipher modes of operation-Advanced Encryption Standard (AES)-Triple DES. Public key cryptography: Principles of public key cryptosystems-The RSA algorithm-Key management – Diffie Hellman Key exchange-Elliptic curve arithmetic-Elliptic curve cryptography. 	8	20%	
IV	 Hash Functions and MAC: Properties of hash functions, birthday attack, hash-cash, Message Authentication Code Algorithms, MAC protocols, HMAC, CBC-MAC. Digital Signatures: Classification of signature schemes, RSA signature, Digital Signature Standard, one time signature schemes, attacks on Digital Signatures, Blind Signatures. 	8	15%	
v	 Cryptocurrencies and Bitcoins: A Simple Cryptocurrency: GoofyCoin, ScroogeCoin, How Bitcoin Achieves Decentralization: Centralization vs. Decentralization, Distributed consensus, Consensus without identity. Mechanics of Bitcoin: Bitcoin transactions, Bitcoin Scripts, Applications of Bitcoin scripts, Bitcoin blocks, The Bitcoin network, How to Store and Use Bitcoins: Simple Local Storage, Hot and Cold Storage, Splitting and 	8	15%	

	Sharing Keys, Online Wallets and Exchanges, Payment Services, Transaction Fees, Currency Exchange Markets		
	SECOND INTERNAL EXAM		
	Introduction to Cyber Security, E-mail Security: Security Services for E- mail-attacks possible through E-mail – establishing keys privacy- authentication of the source-Message Integrity-Non-repudiation-Pretty Good Privacy-S/MIME.		
VI	IPSecurity: Overview of IPSec – IPv4 and IPv6-Authentication Header- Encapsulation Security Payload (ESP)-Internet Key Exchange. Web Security: SSL/TLS Basic Protocol-computing the keys- client authentication-PKI as deployed by SSL Attacks fixed in v3- Exportability- Encoding-Secure Electronic Transaction (SET).	10	20%
	END SEMESTER EXAM		
	QUESTION PAPER PATTERN		
	There will be two parts in the Question paper -Part A and Part B. Part A will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice questions. Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M).The maximum number of sub part questions in Part B tobe limited to 2. The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module, not to exceed the marks assigned to that module specified in the course plan in the syllabus.

Module	Contents	Hours Allotted	% of marks in End-Semester Examination
I	Computer forensics fundamentals: Introduction: What is computer forensics? - Use of computer forensics in law enforcement - Computer forensics assistance to human resources /employment proceedings - Computer forensics services - Benefits of professional forensics methodology - Steps taken by computer forensics specialists.	8	15
11	Types of computer forensics technology: Types of military computer forensics technology, Types of law enforcement in Computer forensic technology, Types of business computer forensic technology. Occurrence of cyber crime - Cyber detectives - Computer forensics investigative services.//Lab exercises may be given for (use any open source tools): 1. Investigating NTFS Drive using DiskExplorer. 2. Viewing contents of a forensic image	8	15
	FIRST INTERNAL EXAM Data recovery: Introduction of Data recovery - Data back-up and recovery - The role of back- up in data recovery - The data-recovery solution. //Lab exercises may be given for (use any open source tools): 1. File Recovery. 2. Data Recovery.	8	15
IV	 Evidence collection and data seizure: Why collect evidence?, Collection options - Obstacles - Types of evidence - The rules of evidence - Volatile evidence - General procedure - Collection and archiving - Methods of collection - Artifact - Collection steps. Preserving the digital crime scene - Computer evidence processing scene - Legal aspects of collecting forensic evidence. // Lab Exercises may be given for (use any open source tools): Gathering evidences Viewing files of various formats 	10	20

V	 Computer image verification and authentication: Special needs of evidential authentication - Practical consideration - Practical implementation. Electronic document discovery :a powerful new litigation tool. Forensics identification and Analysis of technical surveillance devices. // Lab Exercise may be given for (use any open source tools): Identifying image file format. Analyzing images for hidden messages. 		15
	SECOND INTERNAL EXAM		
VI	Reconstructing past events: How to become a digital detective - Useable file formats - Unusable file formats - Converting files. Network forensics scenario - A technical approach - Destruction of e-mail - Damaging computer evidence. // Lab Exercises may be given for (use any open source tools): Cracking password using any password recovery tool. Recovering deleted emails using the recover my email utility Note : Students may be introduced to penetration testing tools like metasploit, Penetration Testing DistributionKali linux, network protocol analyzers like wiresharketc as part of the course.	10	20

	Course Plan		
Module	Contents	Hours Allotted	% of marks in End-Semester Examination
I	Introduction to Python: Features of Python, How to Run Python, Identifiers, Reserved Keywords, Variables, Input, Output and Import Functions, Operators Data Types: Numbers, Strings, List, Tuple, Set, Dictionary, Data Type Conversions. Decision Making, Loops, Nested Loops, Control Statements, Types of Loops	8	15%
II	Function Definition, Function calling, Function arguments, Lambda Functions, Recursive Functions Modules & Packages: Creating Modules, import Statement, Locating Modules, Namespaces and Scope, Packages, Date and Time Modules. Exception Handling: Built-in Exceptions, Handling Exceptions, Exception with arguments, Raising an Exception, User-defined Exception, Assertions in Python.	9	15%
	FIRST INTERNAL EXAM		
	File Handling, Object Oriented Programming: Class definition, Creating objects, Encapsulation, Data hiding, Inheritance, Method overriding, Polymorphism.	8	20%
IV	Regular expressions: Introduction, match() function, search() function, search and replace, regular expression modifiers, regular expression patterns, Character classes, special character classes, repetition cases, findall() method, compile() method. Database Programming: Connecting to a database, Creating Tables, INSERT, UPDATE, DELETE and READ operations, Transaction Control, Disconnecting from a database, Exception Handling in Databases	9	20%
v	GUI Programming: Tkinter introduction, Tkinter and Python Programming, Tk Widgets, Tkinter examples Web Development: Python Web clients tools, Web Clients, Web Servers, Web Services.	8	15%
	SECOND INTERNAL EXAM		

	Web Frameworks : Introduction to Django, Projects and Apps in Django,		
	The Python Application Shell, The Django Administration App, Creating		
	an App using Django.		
	Introduction to SciPy (https://www.scipy.org), NumPy (http://www.numpy.org), matplotlib (https://matplotlib.org).		
VI	A micro project/programming assignment should be given as part of the course.	9	15%
	Assignments may be given in machine learning using resources available at scikit-learn.org.		
	Note : Python may be taught effectively using <i>IPython</i> (<u>https://ipython.org</u>) using Jupiter notebook, which provides an		
	interactive web based platform for programming.		
	END SEMESTER EXAM		
	QUESTION PAPER PATTERN		
	There will be two parts in the Question paper -Part A and Part B.		
	Part A will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M).		
	There will be no choice questions.		
	Part B will have 6 essay questions one from each module of 6 marks each, with		
	an alternative choice question from the same module (6 x 6M=36M).The maximum number of sub part questions in Part B tobe limited to 2.		
	The total marks assigned to questions in Part A (Short answer) and Part B		
	(Essay) together from a single module, not to exceed the marks assigned to		
	that module specified in the course plan in the syllabus.

Course No.	Course Name	L-T-P Credits	Year of Introduction
RLIMCA387	Elective III- Computer Graphics	3-1-0-4	2016
	Course Objectives	•	

- Provide a comprehensive introduction to the basic hardware and software elements of computer graphics.
- Provide a thorough explanation of computer graphics techniques such as geometric transformation, projections, hidden surface elimination, illumination models and 3D rendering.
- Provide an insight into graphics applications and multimedia components.

Syllabus

Introduction: What is Computer Graphics? Basic Raster Graphics: Scan conversion, filling, and clipping Geometric Manipulation: Transformations, Matrices, Homogeneous Coordinates. Elementary 3D Graphics: Plane projections, Vanishing points, Specification of a 3D view. Visibility: Image and object precision, z-buffer algorithms, area based algorithms. Rendering: Lighting, Radiosity, Raytracing

Expected Outcome At the end of the course, Students will be able to

- 1. Describe underlying graphic hardware, architecture, graphic primitives and their attributes and apply algorithms for implementing (drawing) these primitives.
- 2. Develop applications applying mathematical concepts of geometric transformations, polygon filling and clipping in 2 dimensions.
- 3. Compare the different types of projections of 3D objects and the methods to identify visible surfaces of those projected images, rendering them using illumination models.

	Hybrid Model :OpenMP + MPI - Writing a MPI-OpenMP program to find mean deviation. Compiling with mpicc -fopenmp and executing with mpirun		
	Data Parallel Model (PGAS) : UPC		
	Basic Concepts: Thread, Shared object, Private object, affinity, shared access, local access, collective, phase		
	Translation environment - Threads environment, Execution environment - Program startup, Program termination, Program execution		
V	Predefined identifiers - THREADS, MYTHREAD	10	15
	Declarations - Type qualifiers - The shared and reference type qualifiers, layout qualifier, Array Declarators		
	Important statements: Barrier statements - upc_notify, upc_wait, upc_barrier,		
	upc_fence,Collective Iteration - upc_forall		
	Writing a UPC program to find mean deviation. Using gnu UPC compiler.		
	SECOND INTERNAL EXAM		

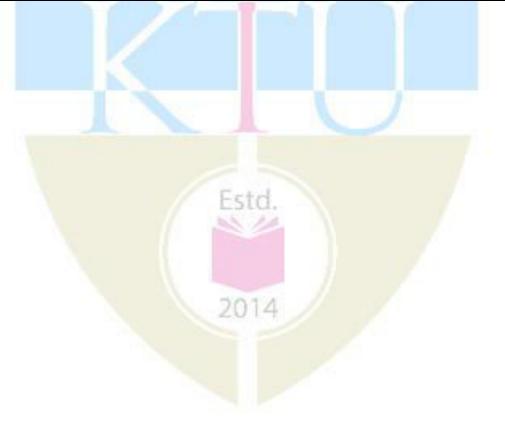

VI	 Measuring the Performance: FLOPS, Calculating Theoretical peak of a Microprocessor, Interconnection networks - Gigabit Ethernet and Infiniband (comparison only). The Linpack Benchmark - Solving Linear Equations, LU Decomposition, Ranking from top500.org, Important fields - Rmax, Rpeak, Nmax, Nhalf, MFlops/Watt, Energy efficient ranking - green500. 	8	15
	END SEMESTER EXAM		I
	QUESTION PAPER PATTERN		
	There will be two parts in the Question paper - Part A and Part B. Part A will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice questions. Part B will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M).The maximum number of sub part questions in Part B to be limited to 2. The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module, not to exceed the marks assigned to that module specified in the course plan in the syllabus.		

Course No	ο.	Course Name	L-T-P Credits	Year of Introduction
RLIMCA3	91	Elective III- Artificial Intelligence	3-1-0-4	2016
		Course Objectives	,	
		echniques of Artificial Intelligence.		
		ethods of solving problems using Artificial Intelligence.		
 Introc 	duce th	ne concept of Expert Systems.		
		Syllabus		
ntroduction 1	to Al a	and Production Systems, Search Strategies, Game play	ing, Knowledge	Representatior
		lge representation using Logic, Planning, Learning, Expe	0.	•
		Expected Outcome		
	ty to ctable	design Algorithms using AI techniques to solve	problems that	are otherwise
• Abili	ty to d	lesign and develop expert systems		
		Text Books		
1. Kevi	n Nigh	t and Elaine Rich, "Artificial Intelligence (SIE)", Mc Graw	Hill-2008.	
2. Stua	rt Russ	sel and Peter Norvig "AI – A Modern Approach", 2nd Ed	lition, Pearson E	ducation 2007.
		References

	Course Plan				
Module	Contents	Hours Allotted	% of marks in End-Semester Examination		
I	Introduction to AI and Production Systems:- AI-Problem formulation, Problem Definition -Production systems, Control strategies, Problem characteristics, Production system characteristics, Example AI Problems (8 Puzzle problem, Missionary Cannibals Problem, Crypt arithmetic Problems, block world Problem)	8	15		
11	Search Strategies : - Blind search strategies -Depth First Search, Breadth First Search, Best First Search, Iterative Deepening Search, Heuristic Search strategies- Admissible Heuristics and examples - Simple Hill Climbing and Steepest Ascending Hill Climbing, Simulated Annealing , A* algorithm	8	15		
	FIRST INTERNAL EXAM				
III	Game playing : Two Player Zero Sum Games, Modelling Two Player Zero Sum Games as search problems, Min-Max Algorithm, Optimising Min Max Algorithm using $\alpha - \beta$ cut off Knowledge Representation Structures :Frames, Sematic Networks and Conceptual Dependencies, Graph Databases.	8	15		
IV	<i>Knowledge representation</i> using Logic : - First Order Predicate Logic (FOPL), Well Formed Formula(WFF) in FOPL,Inference rules for FOPL, The Clause Form and conversion of WFFs to Clause Form, Resolution-Refutation – Example problems	8	15		
v	Planning :- Overview, components of a planning system, Goal stack planning, Hierarchical planning, other planning techniques. Learning :-Forms of learning, inductive learning, learning decision trees, explanation based learning, learning using relevance information, neural net learning & genetic learning	10	20		
	SECOND INTERNAL EXAM				

VI	Expert systems :-Architecture of expert systems, Roles of expert systems – Knowledge Acquisition – Meta knowledge, Heuristics. Typical expert systems – MYCIN, DART, XOON, Expert systems shells. Fuzzy Logic: - Fuzzy Variables ,Fuzzy Sets and Fuzzy Set Operations, Typical Examples using Fuzzy Sets	10	20
	END SEMESTER EXAM

1.	Introducti			

Week	Schedule
I	Familiarisation with build tools. Familiarisation with an IDE (Eclipse, NetBeans,), that support build tools and git. Selection of Topic, Formation of Development Team, Feasibility analysis.
II	Topic Approval, Meeting of Development Team including Scrum Master with Product Owner. Informal, preliminary discussions of requirements. Creating user stories in the rough record. Commencement of the Project.
111	Identifying modules, Initial Design of Database & UI. Starting Test Driven Development. Creating an empty git repository by Scrum Master / one member of the Development team.Setting permission to other members. Pushing the first version of the Project along with a Readme file containing contact details of team members. Using Branch for individual members. Merging with Master.
IV	First Scrum Review. (Here onwards, the Scrum reviews are conducted on every other week)
VII	Project Presentation - Interim Evaluation to be based on Git History
XIII	Project Presentation - Final Evaluation to be based on Git History
XIV	Submission of Project Report, with Rough Record

minutes. Ensure m	are highly encouraged, at the convenience of the Scru eetings once in three days.A sprint is two weeks, so en 30 minutes. A demo to the Product Owner is compulsory	sure biweekly re	

Use git for Version control.

Follow Test Driven Development.Bugzilla or an equivalent tool may be used for bug tracking.

The student should keep a rough record. Divide it into 4 parts. Product Backlog, Database & UI Design, Testing & Validation and details of Versions. Make dated entries to the corresponding part, as the project progresses. The Corrections and comments from Product Owner/Scrum Master should be clearly indicated with the Date.

Project presentations may be conducted for Internal Assessment. They should also serve as supplement to Scrum reviews. The evaluation board may consist of other faculty members/technical staff. A maximum of 2 Presentations are allowed. Scrum reviews should not be sacrificed for presentations.

Students must be encouraged to publish their work in journals and due credit to be given to the students for this.

Estd. 2014

Latex or an equivalent tool should be used for preparing Presentations and Project Report.
