## COMPUTER SCIENCE AND DESIGN

| CST<br>301 | FORMAL<br>LANGUAGES AND<br>AUTOMATA<br>THEORY | Category | L | T | P | Credit | Year of<br>Introduction |
|------------|---|----------|---|---|---|--------|-------------------------|
|            |   | PCC      | 3 | 1 | 0 | 4      | 2019                    |

**Preamble:** This is a core course in theoretical computer science. It covers automata and grammar representations for languages in Chomsky Hierarchy. For regular languages, it also covers representations using regular expression and Myhill-Nerode Relation. The topics covered in this course have applications in various domains including compiler design, decidability and complexity theory, software testing, formal modelling and verification of hardware and software.

**Prerequisite:** Basic knowledge about the following topic is assumed: sets, relations - equivalence relations, functions, proof by Principle of Mathematical Induction.

**Course Outcomes:** After the completion of the course the student will be able to

|     |  |
|-----|--|
| CO1 | Classify a given formal language into Regular, Context-Free, Context Sensitive, Recursive or Recursively Enumerable. [Cognitive knowledge level: Understand]                                     |
| CO2 | Explain a formal representation of a given regular language as a finite state automaton, regular grammar, regular expression and Myhill-Nerode relation. [Cognitive knowledge level: Understand] |
| CO3 | Design a Pushdown Automaton and a Context-Free Grammar for a given context-free language. [Cognitive knowledge level : Apply]  |
| CO4 | Design Turing machines as language acceptors or transducers. [Cognitive knowledge level: Apply]  |
| CO5 | Explain the notion of decidability. [Cognitive knowledge level: Understand]  |

### Assessment Pattern

| Bloom's Category | Continuous Assessment Tests |                | End Semester Examination Marks |
|------------------|-----------------------------|----------------|--------------------------------|
|                  | Test 1 (Marks)              | Test 2 (Marks) |                                |
| Remember         | 30                          | 30             | 30                             |
| Understand       | 30                          | 30             | 30                             |
| Apply            | 40                          | 40             | 40                             |
| Analyze          |                             |                |                                |
| Evaluate         |                             |                |                                |
| Create           |                             |                |                                |

# COMPUTER SCIENCE AND DESIGN

## Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 hours      |

### Continuous Internal Evaluation Pattern:

Attendance : 10 marks

Continuous Assessment - Test : 25 marks

Continuous Assessment - Assignment : 15 marks

### Internal Examination Pattern:

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

### End Semester Examination Pattern:

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 2 sub-divisions and carries 14 marks.

# COMPUTER SCIENCE AND DESIGN

## Syllabus

### CST 301 Formal Languages and Automata Theory

#### Module - 1 (Introduction to Formal Language Theory and Regular Languages)

Introduction to formal language theory– Alphabets, Strings, Concatenation of strings, Languages.

Regular Languages - Deterministic Finite State Automata (DFA) (Proof of correctness of construction not required), Nondeterministic Finite State Automata (NFA), Equivalence of DFA and NFA, Regular Grammar (RG), Equivalence of RGs and DFA.

#### Module - 2 (More on Regular Languages)

Regular Expression (RE), Equivalence of REs and DFA, Homomorphisms, Necessary conditions for regular languages, Closure Properties of Regular Languages, DFA state minimization (No proof required).

#### Module - 3 (Myhill-Nerode Relations and Context Free Grammars)

Myhill-Nerode Relations (MNR)- MNR for regular languages, Myhill-Nerode Theorem (MNT) (No proof required), Applications of MNT.

Context Free Grammar (CFG)- CFG representation of Context Free Languages (proof of correctness is required), derivation trees and ambiguity, Normal forms for CFGs.

#### Module - 4 (More on Context-Free Languages)

Nondeterministic Pushdown Automata (PDA), Deterministic Pushdown Automata (DPDA), Equivalence of PDAs and CFGs (Proof not required), Pumping Lemma for Context-Free Languages (Proof not required), Closure Properties of Context Free Languages.

#### Module - 5 (Context Sensitive Languages, Turing Machines)

Context Sensitive Languages - Context Sensitive Grammar (CSG), Linear Bounded Automata.

Turing Machines - Standard Turing Machine, Robustness of Turing Machine, Universal Turing Machine, Halting Problem, Recursive and Recursively Enumerable Languages.

Chomsky classification of formal languages.

#### Text Book

1. Dexter C. Kozen, Automata and Computability, Springer (1999)

## Reference Materials

1. John E Hopcroft, Rajeev Motwani and Jeffrey D Ullman, Introduction to Automata Theory, Languages, and Computation, 3/e, Pearson Education, 2007
2. Michael Sipser, Introduction To Theory of Computation, Cengage Publishers, 2013.

## Sample Course Level Assessment Questions

**Course Outcome 1 (CO1):** Identify the class of the following languages in Chomsky Hierarchy:

- $L_1 = \{a^n \mid n \text{ is a prime number}\}$
- $L_2 = \{x \in \{0,1\}^* \mid x \text{ represents the binary representation of a decimal number which is a multiple of } 5\}$
- $L_3 = \{a^n b^n c^n \mid n \geq 0\}$
- $L_4 = \{a^m b^n c^{m+n} \mid m > 0, n \geq 0\}$
- $L_5 = \{M\#x \mid M \text{ halts on } x\}$ . Here,  $M$  is a binary encoding of a Turing Machine and  $x$  is a binary input to the Turing Machine.

**Course Outcome 2 (CO2):**

- (i) Design a DFA for the language  $L = \{axb \mid x \in \{a, b\}^*\}$
- (ii) Write a Regular Expression for the language:  $L = \{x \in \{a, b\}^* \mid \text{the last symbol of } x \text{ is } b\}$
- (iii) Write a Regular Grammar for the language:  $L = \{x \in \{0,1\}^* \mid \text{there are no consecutive zeros in } x\}$
- (iv) Show the equivalence classes of the canonical Myhill-Nerode relation induced by the language:  $L = \{x \in \{a, b\}^* \mid x \text{ contains an even number of } a\text{'s and an odd number of } b\text{'s}\}$ .

**Course Outcome 3 (CO3):**

- (i) Design a PDA for the language  $L = \{ww^R \mid w \in \{a, b\}^*\}$ . Here, the notation  $w^R$  represents the reverse of the string  $w$ .
- (ii) Write a Context-Free Grammar for the language  $L = \{a^n b^{2n} \mid n \geq 0\}$ .

**Course Outcome 4 (CO4):**

- (i) Design a Turing Machine for the language  $L = \{a^n b^n c^n \mid n \geq 0\}$
- (ii) Design a Turing Machine to compute the square of a natural number. Assume that the input is provided in unary representation.

**Course Outcome 5 (CO5):** Argue that it is undecidable to check whether a Turing Machine enters a given state during the computation of a given input  $x$ .

## Model Question paper

QP CODE:

PAGES:3

Reg No: \_\_\_\_\_

Name : \_\_\_\_\_

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

FIFTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: CST301

Course Name: Formal Languages and Automata Theory

Max.Marks:100

Duration: 3 Hours

### PART A

Answer all Questions. Each question carries 3 Marks

1. Design a DFA for the language  $L = \{x \in \{a, b\}^* | \text{aba pps not a substrppng ppn } x\}$ .
2. Write a Regular Grammar for the language:  $L = \{axb | x \in \{a, b\}^*\}$
3. Write a Regular Expression for the language:  
 $L = \{x \in \{0,1\}^* | \text{there are no consecutppve 1's ppn } x\}$
4. Prove that the language  $L_1 = \{a^n | n \in N\}$  is not regular.
5. List out the applications of Myhill-Nerode Theorem.
6. Write a Context-Free Grammar for the language:  $L = \{x \in \{a, b\}^* | \#_a(x) = \#_b(x)\}$ . Here, the notation  $\#_1(w)$  represents the number of occurrences of the symbol 1 in the string  $w$ .
7. Design a PDA for the language of odd length binary palindromes (no explanation is required, just list the transitions in the PDA).
8. Prove that Context Free Languages are closed under set union.
9. Write a Context Sensitive Grammar for the language  $L = \{a^n b^n c^n | n \geq 0\}$  (no explanation is required, just write the set of productions in the grammar).

## COMPUTER SCIENCE AND DESIGN

10. Differentiate between Recursive and Recursively Enumerable Languages.

(10x3=30)

### Part B

(Answer any one question from each module. Each question carries 14 Marks)

11. (a) Draw the state-transition diagram showing an NFA  $N$  for the following language  $L$ . Obtain the DFAD equivalent to  $N$  by applying the subset construction algorithm. (7)

$$L = \{x \in \{a, b\}^* \mid \text{the second last symbol of } x \text{ is } b\}$$

- (b) Draw the state-transition diagram showing a DFA for recognizing the following language: (7)

$$L = \{x \in \{0,1\}^* \mid x \text{ is a binary representation of a natural number which is a multiple of 5}\}$$

OR

12. (a) Write a Regular grammar  $G$  for the following language  $L$  defined as:  $L = \{x \in \{a, b\}^* \mid x \text{ does not contain consecutive } b\text{'s}\}$ . (7)

- (b) Obtain the DFA  $A_G$  over the alphabet set  $Z = \{a, b\}$ , equivalent to the regular grammar  $G$  with start symbol  $S$  and productions:  $S \rightarrow aA$  and  $A \rightarrow aA \mid bA \mid b$ . (7)

13. (a) Using Kleen's construction, obtain the regular expression for the language represented by the following NFA

(8)

- (b) Using pumping lemma for regular languages, prove that the language  $L = \{a^n b^n \mid n \geq 0\}$  is not regular. (7)

OR

## COMPUTER SCIENCE AND DESIGN

14. (a)

Obtain the minimum-state DFA from the following DFA. (8)

(b) Using ultimate periodicity for regular languages, prove that the language  $L = \{a^n | n \geq 0\}$  is not regular. (6)

15. (a) Show the equivalence classes of the canonical Myhill-Nerode relation for the language of binary strings with odd number of 1's and even number of 0s. (7)

(b) With an example, explain ambiguity in Context Free Grammar (7)

**OR**

16. (a) Convert the Context-Free Grammar with productions:  $\{S \rightarrow aSb | \epsilon\}$  into Greibach Normal form. (8)

(b) Convert the Context-Free Grammar with productions:  $\{S \rightarrow aSa | bSb | SS | \epsilon\}$  into Chomsky Normal form. (6)

17. (a) Design a PDA for the language  $L = \{a^m b^n c^{m+n} | n \geq 0, m \geq 0\}$ . Also illustrate the computation of the PDA on a string in the language (7)

(b) With an example illustrate how a multi-state PDA can be transformed into an equivalent single-state PDA. (7)

**OR**

## COMPUTER SCIENCE AND DESIGN

18. (a) Using pumping lemma for context-free languages, prove that the language:  $L = \{ww \mid w \in \{a, b\}^*\}$  is not a context-free language. (6)
- (b) With an example illustrate how a CFG can be converted to a single-state PDA (8)
19. (a) Design a Turing machine to obtain the sum of two natural numbers  $a$  and  $b$ , both represented in unary on the alphabet set  $\{1\}$ . Assume that initially the tape contains  $\vdash 1^a 0 1^b \vdash \omega$ . The Turing Machine should halt with  $\vdash 1^{a+b} \vdash \omega$  as the tape content. Also, illustrate the computation of your Turing Machine on the input  $a = 3$  and  $b = 2$ . (7)
- (b) With an example illustrate how a CFG can be converted to a single-state PDA. (7)

**OR**

20. (a) Design a Turing machine to obtain the sum of two natural numbers  $a$  and  $b$ , both represented in unary on the alphabet set  $\{1\}$ . Assume that initially the tape contains  $\vdash 1^a 0 1^b \vdash \omega$ . The Turing Machine should halt with  $\vdash 1^{a+b} \vdash \omega$  as the tape content. Also, illustrate the computation of your Turing Machine on the input  $a = 3$  and  $b = 2$ . (7)
- (b) Write a context sensitive grammar for the language  $L = \{a^n b^n c^n \mid n \geq 0\}$ . (7)  
Also illustrate how the string  $a^2 b^2 c^2$  can be derived from the start symbol of the proposed grammar.

# COMPUTER SCIENCE AND DESIGN

## Teaching Plan

| Sl. No   | Topic   | No. of Hours (45 hrs) |
|--|---|-----------------------|
| <b>Module - 1 (Introduction to Formal Language Theory and Regular Languages)</b> |   | <b>9 Hours</b>        |
| 1.1  | Introduction to formal language theory – Alphabets, strings, concatenation of strings, Languages            | 1 Hour                |
| 1.2  | Deterministic Finite State Automata (DFA) – Example DFA (Proof of correctness of construction not required) | 1 Hour                |
| 1.3  | Formal definition of DFA, Language accepted by the class of DFA   | 1 Hour                |
| 1.4  | Nondeterministic Finite State Automata (NFA) – Example NFA  | 1 Hour                |
| 1.5  | Formal definition of NFA, NFA with $\epsilon$ transitions - examples, formal definition                     | 1 Hour                |
| 1.6  | Equivalence of DFA and NFA with and without $\epsilon$ transitions - Subset construction                    | 1 Hour                |
| 1.7  | Regular Grammar (RG) – Example RGs, derivation of sentences   | 1 Hour                |
| 1.8  | Formal definition of RG, Language represented by a RG   | 1 Hour                |
| 1.9  | Equivalence of RG and DFA   | 1 Hour                |
| <b>Module - 2 (More on Regular Languages)</b>                                    |   | <b>9 Hours</b>        |
| 2.1  | Regular Expression (RE) - Example REs and formal definition   | 1 Hour                |
| 2.2  | Conversion of RE to NFA with $\epsilon$ transition  | 1 Hour                |
| 2.3  | Conversion of NFA with $\epsilon$ transition to RE (Kleen's construction)                                   | 1 Hour                |
| 2.4  | Homomorphisms   | 1 Hour                |
| 2.5  | Pumping Lemma for regular languages   | 1 Hour                |
| 2.6  | Ultimate periodicity  | 1 Hour                |
| 2.7  | Closure Properties of Regular Languages (proof not required)  | 1 Hour                |

## COMPUTER SCIENCE AND DESIGN

|   |  |                 |
|---|--|-----------------|
| 2.8   | DFA state minimization - Quotient construction                               | 1 Hour          |
| 2.9   | State Minimization Algorithm - Example                                       | 1 Hour          |
| <b>Module - 3 (Myhill-Nerode Relations and Context Free Grammars)</b> |  | <b>10 Hours</b> |
| 3.1   | Myhill-Nerode Relations (MNR) - Example, Properties of MyhillNerode Relation | 1 Hour          |
| 3.2   | Conversion of DFA to MNR (Proof of correctness not required)                 | 1 Hour          |
| 3.3   | Conversion of MNR to DFA(Proof of correctness not required)                  | 1 Hour          |
| 3.4   | Myhill-Nerode Theorem (MNT)  | 1 Hour          |
| 3.5   | Applications of MNT  | 1 Hour          |
| 3.6   | Context Free Grammar (CFG) - Example CFGs and formal definition              | 1 Hour          |
| 3.7   | Proving correctness of CFGs  | 1 Hour          |
| 3.8   | Derivation Trees and ambiguity   | 1 Hour          |
| 3.9   | Chomsky Normal Form  | 1 Hour          |
| 3.10  | Greibach Normal Form   | 1 Hour          |
| <b>Module - 4 (More on Context-Free Languages)</b>                    |  | <b>8 Hours</b>  |
| 4.1   | Nondeterministic Pushdown Automata (PDA) – Example PDAs, formal definition   | 1 Hour          |
| 4.2   | Acceptance criteria - equivalence  | 1 Hour          |
| 4.3   | Deterministic PDA  | 1 Hour          |
| 4.4   | Conversion of CFG to PDA (No proof required)                                 | 1 Hour          |
| 4.5   | Conversion of PDA to CGF - Part I (No proof required)                        | 1 Hour          |
| 4.6   | Conversion of PDA to CGF - Part II (No proof required)                       | 1 Hour          |
| 4.7   | Pumping Lemma for context-free languages (No proof required)                 | 1 Hour          |
| 4.8   | Closure Properties of Context Free Languages                                 | 1 Hour          |

## COMPUTER SCIENCE AND DESIGN

| <b>Module - 5 (Context Sensitive Languages, Turing Machines)</b> |  | <b>9 Hours</b> |
|--|--|----------------|
| 5.1  | Context Sensitive Grammar (CSG) - Examples, formal definition                | 1 Hour         |
| 5.2  | Linear Bounded Automata (LBA) - Example LBA, formal definition               | 1 Hour         |
| 5.3  | Turing Machine (TM) - TM as language acceptors - examples, formal definition | 1 Hour         |
| 5.4  | TM as transducers - examples   | 1 Hour         |
| 5.5  | Robustness of the standard TM model - Multi-tape TMs, Nondeterministic TM    | 1 Hour         |
| 5.6  | Universal Turing Machine   | 1 Hour         |
| 5.7  | Halting Problem of TM - proof of its undecidability                          | 1 Hour         |
| 5.8  | Recursive and Recursively Enumerable Languages                               | 1 Hour         |
| 5.9  | Chomsky classification of formal languages                                   | 1 Hour         |

**Preamble:** Study of this course provides the learners a clear understanding of how computer networks from local area networks to the massive and global Internet are built, how they allow computers to share information and communicate with one another. This course covers the physical aspects of computer networks, layers of OSI Reference model, and inter-networking. The course helps the learners to compare and analyze the existing network technologies and choose a suitable network design for a given system.

**Prerequisite:** Nil

**Course Outcomes:** After the completion of the course, the student will be able to

| <b>CO#</b> | <b>Course Outcomes</b>   |
|------------|--|
| <b>CO1</b> | Explain the features of computer networks, protocols, and network design models ( <b>Cognitive Knowledge: Understand</b> )   |
| <b>CO2</b> | Describe the fundamental characteristics of the physical layer and identify the usage in network communication ( <b>Cognitive Knowledge: Apply</b> )               |
| <b>CO3</b> | Explain the design issues of data link layer, link layer protocols, bridges and switches ( <b>Cognitive Knowledge: Understand</b> )                                |
| <b>CO4</b> | Illustrate wired LAN protocols (IEEE 802.3) and wireless LAN protocols (IEEE 802.11) ( <b>Cognitive Knowledge: Understand</b> )                                    |
| <b>CO5</b> | Select appropriate routing algorithms, congestion control techniques, and Quality of Service requirements for a network ( <b>Cognitive Knowledge: Apply</b> )      |
| <b>CO6</b> | Illustrate the functions and protocols of the network layer, transport layer, and application layer in inter-networking ( <b>Cognitive Knowledge: Understand</b> ) |

### Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3            |

### Continuous Internal Evaluation Pattern:

Attendance : 10 marks  
Continuous Assessment Test : 25 marks  
Continuous Assessment Assignment : 15 marks

### Internal Examination Pattern:

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus. The second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

### End Semester Examination Pattern:

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer anyone. Each question can have maximum 2 sub-divisions and carries 14 marks.

# COMPUTER SCIENCE AND DESIGN

## Syllabus

### **Module - 1 (Introduction and Physical Layer)**

Introduction – Uses of computer networks, Network hardware, Network software. Reference models – The OSI reference model, The TCP/IP reference model, Comparison of OSI and TCP/IP reference models.

Physical Layer – Modes of communication, Physical topologies, Signal encoding, Repeaters and hub, Transmission media overview. Performance indicators – Bandwidth, Throughput, Latency, Queuing time, Bandwidth–Delay product.

### **Module - 2 (Data Link Layer)**

Data link layer - Data link layer design issues, Error detection and correction, Sliding window protocols, High-Level Data Link Control (HDLC) protocol. Medium Access Control (MAC) sublayer – Channel allocation problem, Multiple access protocols, Ethernet, Wireless LANs - 802.11, Bridges & switches - Bridges from 802.x to 802.y, Repeaters, Hubs, Bridges, Switches, Routers and Gateways.

### **Module - 3 (Network Layer)**

Network layer design issues. Routing algorithms - The Optimality Principle, Shortest path routing, Flooding, Distance Vector Routing, Link State Routing, Multicast routing, Routing for mobile hosts. Congestion control algorithms. Quality of Service (QoS) - requirements, Techniques for achieving good QoS.

### **Module - 4 (Network Layer in the Internet)**

IP protocol, IP addresses, Internet Control Message Protocol (ICMP), Address Resolution Protocol (ARP), Reverse Address Resolution Protocol (RARP), Bootstrap Protocol (BOOTP), Dynamic Host Configuration Protocol (DHCP). Open Shortest Path First (OSPF) Protocol, Border Gateway Protocol (BGP), Internet multicasting, IPv6, ICMPv6.

### **Module – 5 (Transport Layer and Application Layer)**

Transport service – Services provided to the upper layers, Transport service primitives. User Datagram Protocol (UDP). Transmission Control Protocol (TCP) – Overview of TCP, TCP segment header, Connection establishment & release, Connection management modeling, TCP retransmission policy, TCP congestion control.

Application Layer – File Transfer Protocol (FTP), Domain Name System (DNS), Electronic mail, Multipurpose Internet Mail Extension (MIME), Simple Network Management Protocol

# COMPUTER SCIENCE AND DESIGN

(SNMP), World Wide Web(WWW) – Architectural overview.

## Text Books

1. Andrew S. Tanenbaum, Computer Networks, 4/e, PHI (Prentice Hall India).
2. Behrouz A Forouzan, Data Communication and Networking, 4/e, Tata McGraw Hill

## Reference Books

1. Larry L Peterson and Bruce S Dave, Computer Networks – A Systems Approach, 5/e, Morgan Kaufmann.
2. Fred Halsall, Computer Networking and the Internet, 5/e.
3. James F. Kurose, Keith W. Ross, Computer Networking: A Top-Down Approach, 6/e.
4. Keshav, An Engineering Approach to Computer Networks, Addison Wesley, 1998.
5. W. Richard Stevens. TCP/IP Illustrated Volume 1, Addison-Wesley, 2005.
6. William Stallings, Computer Networking with Internet Protocols, Prentice-Hall, 2004.
7. Request for Comments (RFC) Pages - IETF -<https://www.ietf.org/rfc.html>

## Course Level Assessment Questions

### Course Outcome1 (CO1)

1. Compare TCP/IP and OSI reference model.
2. The purpose of physical layer is to transport a raw bit stream from one machine to another. Justify.

### Course Outcome2 (CO2)

1. Write the physical and transmission characteristics of Optical Fibre Cable guided transmission media.
2. The distance between the sender and receiver systems is about 200 KM. The speed of transmission is 2GB/s. Find out the propagation time?

### Course Outcome3 (CO3)

1. Ethernet frames must be at least 64 bytes long to ensure that the transmitter is still going in the event of a collision at the far end of the cable. Fast Ethernet has the same 64-byte minimum frame size but can get the bits out ten times faster. How is it possible to maintain the same minimum frame size?
2. What do you mean by bit stuffing?

### Course Outcome4 (CO4)

1. Draw and explain the frame format for Ethernet.
2. Give the differences between CSMA/CD and CSMA/CA protocol.

### Course Outcome5 (CO5)

1. Consider the given subnet in which distance vector routing is used, and the vectors just come in to router C as follows: from B: (5, 0, 8, 12, 6, 2); from D: (16, 12, 6, 0, 9, 10);

## COMPUTER SCIENCE AND DESIGN

and from E: (7, 6, 3, 9, 0, 4). The measured delays from C to B, D, and E, are 6, 3, and 5, respectively. What is C's new routing table? Give both the outgoing line to use and the expected delay.

2. Illustrate the leaky bucket congestion control technique.

### Course Outcome 6 (CO6)

1. How do you subnet the Class C IP Address 206.16.2.0 so as to have 30 subnets. What is the subnet mask for the maximum number of hosts? How many hosts can each subnet have?
2. Give the architecture of World Wide Web.

### Model Question Paper

QP CODE:

PAGES:

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

FIFTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: CST 303

Course Name : Computer Networks

Max Marks: 100

Duration: 3 Hours

PART-A

(Answer All Questions. Each question carries 3 marks)

1. What does "negotiation" mean when discussing network protocols in a layered architecture? Give an example.

## COMPUTER SCIENCE AND DESIGN

2. Define simplex, half-duplex, and full-duplex transmission modes. Give one example for each.
3. Data link protocols almost always put the CRC in a trailer rather than in a header. Why?
4. An 8-bit byte with binary value 10101111 is to be encoded using an even-parity Hamming code. What is the binary value after encoding?
5. Illustrate the Count to Infinity problem in routing.
6. Describe two major differences between the warning bit method and the Random Early Detection (RED) method.
7. The Protocol field used in the IPv4 header is not present in the fixed IPv6 header. Why?
8. How many octets does the smallest possible IPv6 (IP version 6) datagram contain?
9. Can Transmission Control Protocol(TCP) be used directly over a network (e. g. an Ethernet) without using IP? Justify your answer.
10. When Web pages are sent out, they are prefixed by MIME headers. Why?

(10x3=30)

### Part B

(Answer any one question from each module. Each question carries 14 Marks)

11. (a) With a neat diagram, explain Open Systems Interconnection (OSI) Reference Model. (8)
- (b) Compare Twisted Pair, Coaxial Cable and Optical Fibre guided transmission media. (6)

OR

12. (a) Consider two networks providing reliable connection-oriented service. One of them offers a reliable byte stream and the other offers a reliable message stream. Are they identical? Justify your answer. (8)
- (b) Sketch the waveform in Manchester and Differential Manchester Encoding for the bitstream 11000110010. (6)

## COMPUTER SCIENCE AND DESIGN

13. (a) A bit stream 10011101 is transmitted using the standard CRC method. The generator polynomial is  $x^3 + 1$ . Show the actual bit string transmitted. Suppose the third bit from the left is inverted during transmission. Show that this error is detected at the receiver's end. (8)

- (b) Explain the working of High-Level Data Link Control (HDLC) protocol. (6)

OR

14. (a) Explain the working of IEEE 802.11 MAC sublayer. (10)

- (b) Distinguish between Bridges and Switches. (4)

15. (a) Illustrate Distance Vector Routing algorithm with an example. (8)

- (b) Explain the characteristics of Routing Information Protocol (RIP). (6)

OR

16. (a) A computer on a 6-Mbps network is regulated by a token bucket. The token bucket is filled at a rate of 1 Mbps. It is initially filled to capacity with 8 megabits. How long can the computer transmit at the full 6 Mbps? (8)

- (b) Explain how routing is performed for mobile hosts. (6)

17. (a) Explain the address resolution problem using Address Resolution Protocol (ARP) and Reverse Address Resolution Protocol (RARP) with an example network. (10)

- (b) A network on the Internet has a subnet mask of 255.255.240.0. What is the maximum number of hosts it can handle? (4)

OR

18. (a) How do you subnet the Class C IP address 195.1.1.0 so as to have 10 subnets with a maximum of 12 hosts in each subnet. (6)

- (b) Draw IPv6 Datagram format and explain its features. (8)

19. (a) Distinguish the header formats of Transmission Control protocol (TCP) and User Datagram Protocol (UDP). (8)

- (b) Explain the principal Domain Name System (DNS) resource record types for (6)

## COMPUTER SCIENCE AND DESIGN

IPv4.

**OR**

20. (a) What is the role of Simple Mail Transfer Protocol (SMTP) in E- mail? (6)
- (b) With the help of a basic model, explain the working of World Wide Web (WWW). (8)

| No   | Contents  | No of Lecture Hrs |
|--|---|-------------------|
| <b>Module – 1 (Introduction and Physical Layer) (10 hrs)</b> |   |                   |
| 1.1  | Introduction, Uses of computer networks.  | 1 hour            |
| 1.2  | Network Hardware, Local Area Networks (LAN), Metropolitan Area Networks (MAN), Wide Area Networks (WAN), Wireless networks, Home networks, Internetworks. | 1 hour            |
| 1.3  | Network Software, Protocol hierarchies, Design issues for the layers.   | 1 hour            |
| 1.4  | Connection-oriented and Connectionless services, Service primitives, Relationship of services to protocols.   | 1 hour            |
| 1.5  | Reference models, The OSI reference model.  | 1 hour            |
| 1.6  | The TCP/IP reference model, Comparison of OSI and TCP/IP reference models.  | 1 hour            |
| 1.7  | Physical layer, Modes of communication, Simplex, Half-duplex, and Full-duplex, Physical topologies, Mesh, Star, Bus, Ring, Hybrid.                        | 1 hour            |
| 1.8  | Signal encoding, Manchester, Differential Manchester.   | 1 hour            |
| 1.9  | Transmission media overview, Guided media (twisted pair, coaxial and fiber optic media), Unguided/wireless media (radio, microwave, and infrared).        | 1 hour            |
| 1.10   | Performance indicators, Bandwidth (in Hertz and in Bits per Seconds),   | 1 hour            |

## COMPUTER SCIENCE AND DESIGN

|  |  |        |
|--|--|--------|
|  | Throughput, Latency (Delay), Queuing time, Bandwidth-Delay product.  |        |
| <b>Module 2 – (Data Link Layer) (10 hrs)</b> |  |        |
| 2.1  | Data link layer design issues.   | 1 hour |
| 2.2  | Error detection and correction, Error correcting codes   | 1 hour |
| 2.3  | Error detecting codes.   | 1 hour |
| 2.4  | Sliding window protocols.  | 1 hour |
| 2.5  | High-Level Data Link Control(HDLC) protocol.   | 1 hour |
| 2.6  | Medium Access Control (MAC) sublayer, Channel allocation problem, Multiple access protocols.                           | 1 hour |
| 2.7  | Ethernet, Ethernet cabling, Manchester encoding, Ethernet MAC sublayer protocol, Binary Exponential Backoff algorithm. | 1 hour |
| 2.8  | Ethernet performance, Switched Ethernet, Fast Ethernet, Gigabit Ethernet, IEEE 802.2: Logical Link Control.            | 1 hour |
| 2.9  | Wireless LANs, 802.11 protocol stack, Physical layer, MAC Sublayer protocol, Frame structure.                          | 1 hour |
| 2.10   | Bridges & switches, Bridges from 802.x to 802.y, Repeaters, Hubs, Bridges, Switches, Routers, and Gateways.            | 1 hour |
| <b>Module 3 - (Network Layer) (8 hrs)</b>    |  |        |
| 3.1  | Network layer design issues.   | 1 hour |
| 3.2  | Routing algorithms, The Optimality Principle, Shortest path routing, Flooding.   | 1 hour |
| 3.3  | Distance Vector Routing.   | 1 hour |
| 3.4  | Link State Routing.  | 1 hour |
| 3.5  | Multicast routing, Routing for mobile hosts.   | 1 hour |

## COMPUTER SCIENCE AND DESIGN

|  |  |        |
|--|--|--------|
| 3.6  | General principles of congestion control, Congestion prevention policies, Congestion control in virtual circuit subnets.     | 1 hour |
| 3.7  | Congestion control algorithms, Congestion control in Datagram subnets, Load shedding, Jitter control.                        | 1 hour |
| 3.8  | Quality of Service, Requirements, Techniques for achieving good Quality of Service.  | 1 hour |
| <b>Module 4 – (Network Layer in the Internet) (9 hrs)</b>          |  |        |
| 4.1  | Network layer in the Internet, Internet Protocol (IP).   | 1 hour |
| 4.2  | IP Addresses, Subnets, Classless Inter-Domain Routing (CIDR).  | 1 hour |
| 4.3  | IP Addresses, Network Address Translation (NAT).   | 1 hour |
| 4.4  | Internet Control Message Protocol (ICMP), Address Resolution Protocol (ARP), Reverse Address Resolution Protocol (RARP).     | 1 hour |
| 4.5  | Bootstrap Protocol (BOOTP), Dynamic Host Configuration Protocol (DHCP).  | 1 hour |
| 4.6  | Open Shortest Path First (OSPF) protocol.  | 1 hour |
| 4.7  | Border Gateway Protocol (BGP).   | 1 hour |
| 4.8  | Internet multicasting.   | 1 hour |
| 4.9  | IPv6, Header format, Extension headers, Internet Control Message Protocol version 6 (ICMPv6).                                | 1 hour |
| <b>Module 5 - ( Transport Layer and Application Layer) (8 hrs)</b> |  |        |
| 5.1  | Transport Service, Services provided to the upper layers, Transport service primitives. User Datagram Protocol (UDP).        | 1 hour |
| 5.2  | Transmission Control Protocol (TCP), TCP segment header, Connection establishment & release, Connection management modeling. | 1 hour |
| 5.3  | TCP retransmission policy, TCP congestion control.   | 1 hour |
| 5.4  | Application layer, File Transfer Protocol (FTP).   | 1 hour |

**Preamble:** This course helps the learners to understand the web programming concepts. It includes the essential frontend and backend technologies needed for the development of web applications. The learners will have an opportunity to gain necessary web development skills such as HTML, CSS, JavaScript, PHP, MySQL integration, JSON and Laravel framework.

**Prerequisite:** Knowledge of Programming is required.

**Course Outcomes:** After the completion of the course the student will be able to

|     |  |
|-----|--|
| CO1 | Explain Hypertext Markup Language (HTML) concepts and fundamentals of WWW. <b>(Cognitive Knowledge Level: Understand)</b>  |
| CO2 | Design responsive and interactive web pages using CSS and JavaScript (JS) <b>(Cognitive Knowledge Level: Apply)</b>  |
| CO3 | Construct websites using advanced sever side programming tool PHP <b>(Cognitive Knowledge Level: Apply)</b>  |
| CO4 | Develop dynamic web applications using PHP and perform MySQL database operations. <b>(Cognitive Knowledge Level: Apply)</b>  |
| CO5 | Illustrate the importance of object exchange formats using JSON and the MVC based web application development frameworks (Laravel) <b>(Cognitive Knowledge Level: Apply)</b> |

## COMPUTER SCIENCE AND DESIGN

### Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 hours      |

### Continuous Internal Evaluation Pattern:

|                                   |           |
|-----------------------------------|-----------|
| Attendance                        | :10 marks |
| Continuous Assessment-Test        | :25 marks |
| Continuous Assessment -Assignment | :15 marks |

### Internal Examination Pattern:

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

### End Semester Examination Pattern:

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 2 sub-divisions and carries 14 marks.

# COMPUTER SCIENCE AND DESIGN

## Syllabus

### Module – 1 (WWW, HTML)

**Introduction to the Internet & WWW:** Evolution of Internet & World Wide Web-Web Basics, URI's & URL-MIME.

Introduction to HTML5: Structuring & editing an HTML5 document, Fundamentals of HTML-Headings-Hyper Links-Images-Special Characters & Horizontal Rules-Lists-Tables-Forms-Internal Linking-Meta Elements-HTML5 Form input types-Input and Data List Elements and autocomplete attribute-Page Structure Elements-Multimedia-HTML5 Audio & video elements, HTML graphics, HTML APIs.

### Module -2 (CSS, JavaScript)

**Introduction to Stylesheets:** Introduction to CSS-Basic syntax and structure-Inline Styles, Embedded Style Sheets, Conflict Resolution, Linking External Style Sheets-Exploring CSS Selectors-Properties, values, Positioning Elements: Absolute Positioning, Relative Positioning - Backgrounds-List Styles-Element Dimensions- Table Layouts-Box Model and Text Flow-div and span -Basics of Responsive CSS, CSS forms, Media port & Media Queries.

**Introduction to JavaScript:** Introduction to Scripting- Programming fundamentals of JavaScript-Obtaining User Input with prompt Dialogs-Arithmetic-Decision Making -Control Statements-Functions -Arrays-classes, Objects -Document Object Model (DOM) -Form processing.

### Module- 3 (PHP Basics)

**PHP Language Structure:** Introduction- Building blocks of PHP-Variables, Data Types -simple PHP program-Converting between Data Types- PHP numbers, Operators and Expressions -Flow Control functions - Control statements- Working with Functions- Initializing and Manipulating Arrays-- Objects-String Comparisons-String processing with Regular Expression

### Module -4 (PHP- MySQL)

**Advanced PHP:** Form processing and Business Logic-PHP filters, Cookies- Sessions & MySQL Integration- Connecting to MySQL with PHP- Performing CREATE, DELETE, INSERT, SELECT and UPDATE operations on MySQL table -Working with MySQL data-Reading from Database-Dynamic Content.

### Module- 5 (JSON, Laravel)

**JSON Data Interchange Format:** Syntax, Data Types, arrays, Object, JSON Schema, JSON server, Manipulating JSON data with PHP

**Web Development Frameworks:** Laravel Overview-Features of Laravel-Setting up a Laravel Development Environment-Application structure of Laravel-Routing -Middleware-Controllers- Route Model Binding-Views-Redirections-Request and Responses.

# COMPUTER SCIENCE AND DESIGN

## Textbook

- 1 Paul J. Deitel, Harvey M. Deitel, Abbey Deitel, Internet & World Wide Web How to Program 5th Edition Pearson Education.
2. Lindsay Bassett, Introduction to JavaScript Object Notation: A To-the-Point Guide to JSON 1st Edition, O'Reilly.
3. Julie C. Meloni, PHP, MySQL & JavaScript All in One, Sams Teach Yourself, 5th Ed, Sams Publishing.
4. Matt Stauffer," LARAVEL up and Running, A framework for building modern PHP apps" 1st Edition, O'Reilly.

## Reference Books

1. Robert W Sebesta, Programming the World Wide Web, 7/e, Pearson Education Inc, 8th Edition
2. Larry Ullman, PHP 6 and MySQL 5 for Dynamic Web Sites: Visual QuickPro Guide, Peachpit Press
3. Eric van der Vlist, Danny Ayers, Erik Bruchez, Joe Fawcett, Alessandro Vernet, Wrox- Professional Web 2.0 Programming, Wiley-India edition

## Course Level Assessment Questions

### Course Outcome 1 (CO1):

1. Construct a valid HTML document for your personal Profile registration page for a Job Site www.123Jobs.com. Add relevant HTML elements in a table, to accept a minimum of 10 different fields which includes your name, address, phone, email address, your picture, your college; your branch, fields for your personal history (Minimum 3 fields), favourite theory and practical subjects (Checkbox), Username, Password(password)
2. What is MIME? Give the expansion of MIME. List four examples for MIME types. State the reason why MIME type specification is necessary in a request-response transaction between a browser and server.
3. What is codec? Recognize the role of controls attribute in <video>&<audio> tag in HTML. Use the COVID vaccination promotional video 'MySafety.mp4' in a web page with suitable HTML code, 'autoplay' option enabled and displayed in a standard dimension 750 X500.

### Course Outcome 2 (CO2):

1. Organize a sample web page for the event 'Raagam2021' at your campus and use embedded Style sheets to apply a minimum 5 styles. State the Style Specification format of embedded style sheets.
2. Write CSS style rules to implement the following in a web page:
  - a. To display the content of hyperlinks with yellow background color and in italics.
  - b. To display the contents of unordered lists in bold and in Arial font.
  - c. To display a background image titled "birds.jpg" with no tiling.
3. Write the code for an HTML document with embedded JavaScript scripts, which initially displays a paragraph with text "Welcome" and a button titled "Click". When the button is clicked, the message "Hello from JavaScript" in bold should replace the paragraph text.

## COMPUTER SCIENCE AND DESIGN

### Course Outcome 3 (CO3):

1. Write a PHP program to store the name and roll no of 10 students in an Associative Array and Use foreach loop to process the array and perform asort, rsort and ksort in the array. Illustrate with suitable output data.
2. Design an HTML page which enters a given number, write a PHP program to display a message indicating, whether the number is odd or even, when clicking on the submit button.
3. Write a PHP program to compute the sum of the positive integers up to 100 using do while.

### Course Outcome 4 (CO4):

1. Write a PHP form handling program to verify the user authentication credentials of a web page using MySQL connection and store the userid value as a Session variable if the userid is valid.
2. Create a valid HTML document for yourself, including your name, address, and email address. Also add your college; your major and the course. Perform form handling in PHP and process the output using POST method.
3. Write an embedded PHP script which displays the factorial of all numbers from 1 to 10 in a table in the web page. The factorial should be calculated and returned from a function. The table headings should be "Number" and "Factorial"

### Course Outcome 5 (CO5):

1. What is Route Model Binding in Laravel? Which types of route model binding are supported in Laravel?
2. Explain how Laravel performs route handling using routes calling controller methods.
3. List the data types used in JSON. Explain the use of parse () and stringify() functions in JSON with examples.

**Model Question Paper**

**QP CODE:**

**Reg No:** \_\_\_\_\_

**Name:** \_\_\_\_\_

**PAGES: 4**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY  
FIFTH SEMESTER B. TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: CXT 305**

**Course Name: Web Programming**

**Max. Marks: 100**

**Duration: 3 Hours**

**PART A**

**Answer All Questions. Each Question Carries 3 Marks**

1. Define WWW. List any two examples of web server & web browser. Differentiate between URL and a domain.
2. Write the syntax of the URL? Rewrite the default URL of your university website by adding a subdomain named 'Research' and a web page named 'FAQ.html'. Also link this URL through the logo of 'kturesearch.png' placed in a web page. The FAQ page should be opened in a new window.
3. Illustrate the implementation of a JavaScript function greeting () using external .js file, to display a welcome message, when you click on a Button in an HTML page.
4. What are different ways of adjusting spacing in a text with suitable example.
5. Discuss the various CSS style sheet levels with suitable examples. How are conflicts resolved when multiple style rules apply to a single web page element?
6. Describe how input from an HTML form is retrieved in a PHP program, with an example.
7. Write a PHP program to check whether a number is prime number or not.

## COMPUTER SCIENCE AND DESIGN

8. Discuss the various steps for establishing PHP-MySQL connection with a MySQL database.
9. Describe the schema of a document implemented in JSON with suitable examples.
10. Explain the role of Resource controllers in Laravel.

(10x3=30)

### Part B

(Answer any one question from each module. Each question carries 14 Marks)

11. (a) Design a webpage that displays the following table. (6)

| Food Item  | Recommended Intake |      |        |      |
|------------|--------------------|------|--------|------|
|            | age<15             |      | age>15 |      |
|            | gm                 | Kcal | gm     | Kcal |
| Cerials    | 1000               | 2000 | 750    | 1760 |
| NonCerials | 450                | 800  | 350    | 600  |

- (b) What is the difference between radio buttons and checkboxes when implemented using HTML? Write HTML code to implement a form that has the following elements: (8)
- i. A textbox that can accept a maximum of 25 characters.
  - ii. Three radio buttons with valid Label, Names, and values.
  - iii. Three check boxes buttons with valid Label, Names, and values.
  - iv. A selection list containing four items, two of which are always visible.
  - v. A submit button clicking on which will prompt the browser to send the form data to the server “http://www..mysite.com/reg.php” using the “POST” method and reset button to clear its contents. You can use any text of your choice to label the form elements.

OR

12. (a) Write the equivalent HTML code to implement the following in a web page: (6)
- (i) An image titled “birds.jpg” with a height of 100 pixels and width of 200 pixels. If the image cannot be accessed, a message “No image available” should be displayed (ii) A hyperlink to the URL “www.mysite.com/birds.jpg”. The hyperlink should have the label “Click Here”.
- (b) Create a static HTML document for your portfolio, which includes the following contents: your name, address, Mobile Number, and email address. Also add the details about your college, university, major and the batch of study. Include a picture of yourself and at least one other image

## COMPUTER SCIENCE AND DESIGN

(friend/pet/role model) to the document with a short description about that. Add three paragraphs about your personal history, with links to your social media profile. Also, create an ordered list for describing your Skill Set & an unordered list showing your Strengths & Weaknesses.

(8)

13. (a) Illustrate the usage of JavaScript DOM in event handling and explain any three methods with examples. (8)

(b) Write CSS and the corresponding HTML code for the following:

i. Set the background color for the hover and active link states to "green"

ii. Set the list style for unordered lists to "square".

iii. Set "Flower.png" as the background image of the page and set a 3% margin for the pages

iv. Set a dashed border for the left and right and a double border for the top & bottom of a table with 2 rows. (6)

OR

14. (a) List the order of precedence of style levels. Organize a sample web page for providing 'KTU BTech Honours Regulation 19' for KTU and use an embedded Style sheet to apply minimum 5 styles for list, tables and pages.

(6)

(b) Illustrate the different ways of Array declaration in JavaScript. Describe the function of the following JavaScript Array object methods with examples. (i) join (ii) slice. (8)

15. (a) Explain any six-string handling functions used in PHP with example. (6)

(b) How does a PHP array differ from an array in C? List the different ways to create an array in PHP with an example. Explain any 4 functions that deals with PHP array. (8)

OR

16. (a) During the process of fetching a web page from a web server to a client browser, at what point does an embedded PHP script get executed? What are the two modes that the PHP processor operates in? Explain. (6)

(b) Why is PHP considered to be dynamically typed? Distinguish between implode and explode function in PHP with suitable examples. (8)

17. (a) Write equivalent PHP statements corresponding to the following: (8)

i. Declare an associative array named "ages" to store the key-value pairs ("Alice", 30), ("Bob", 30), ("Harry", 35), ("Mary", 32).

ii. Modify the value associated with the key "Mary" to 28.

iii. Sort the array according to values maintaining the key-value relationships and print the sorted key-value pairs.

iv. The entry identified by the key "Bob"

(b) What are the uses of cookies in web pages? Describe the syntax for setting cookies in PHP. How can you access and delete the cookie using setcookie() function?

## COMPUTER SCIENCE AND DESIGN

(6)

**OR**

18. (a) Write a PHP form handling program to perform the user registration of any website with a minimum of 5 different fields and insert the data into a MySQL table after establishing necessary connections with the DB.

(8)

(b) Design the HTML page which enters a given number and embeds the PHP code to display a message indicating, whether the number is odd or even, when clicking on the 'CHECK NUMBER' button.

(6)

19. (a) With a neat diagram, explain about Laravel MVC Framework.

(6)

(b) Discuss in detail Laravel's Routing mechanisms.

(8)

**OR**

20. (a) Enumerate the data types in JSON. Illustrate the document definition of a 'Student document' using JSON Schema.

(8)

(b) Discuss the following in Laravel Views

(6)

i. Creating & Rendering Views.

ii. Passing Data to Views.

iii. Sharing Data with All Views.

## COMPUTER SCIENCE AND DESIGN

| CXT<br>307 | VIRTUAL REALITY | Category | L | T | P | Credit | Year of<br>Introduction |
|------------|-----------------|----------|---|---|---|--------|-------------------------|
|            |                 | PCC      | 3 | 1 | 0 | 4      | 2021                    |

**Preamble:** : This course is designed to give historical and modern overviews and perspectives on virtual reality. It describes the fundamentals of sensation, perception, technical and engineering aspects of virtual reality systems.

**Prerequisite:** NIL

**Course Outcomes:** After completion of the course the student will be able to :

|     |  |
|-----|--|
| CO1 | <b>[Cognitive knowledge level: Understand]</b><br>Demonstrate the basic concepts of virtual reality and virtual reality systems. |
| CO2 | <b>[Cognitive knowledge level: Understand]</b><br>Illustrate the basic concepts of virtual world representations.                |
| CO3 | <b>[Cognitive knowledge level : Apply]</b><br>Build the Geometry of Virtual World.   |
| CO4 | <b>[Cognitive knowledge level: Apply]</b><br>Model motions of both real and virtual world.                                       |
| CO5 | <b>[Cognitive knowledge level: Understand]</b><br>Illustrate the basic concepts of interaction and audio.                        |

| Evaluate         |                             |            |                                |
| Create           |                             |            |                                |

**Mark Distribution**

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 hours      |

**Continuous Internal Evaluation Pattern:**

Attendance : 10 marks  
 Continuous Assessment - Test : 25 marks  
 Continuous Assessment - Assignment : 15 marks

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have a maximum 2 subdivisions and carries 14 marks.

**Syllabus****CXT 307 VIRTUAL REALITY****Module - 1 (Introduction to Virtual Reality)**

Introduction - virtual reality, Modern VR experiences, History - Staring at rectangle, Moving Pictures, Towards convenience and portability, Video games, Beyond staring at a rectangle, VR headsets, Bringing people together.

Virtual reality systems- Hardware, Software, Key Elements of Virtual Reality Experience, Areas of Applications of virtual reality.

**Module - 2 (Representing Virtual World)**

Interface to the Virtual World-Input -user Monitoring, World Monitoring Interface to the Virtual World- Output - Visual Displays, Aural Displays, Haptic Displays, Representation of Virtual World.

**Module - 3 (Geometry of Virtual World, Visual Perception)**

The Geometry of Virtual Worlds - Geometric Models, Changing Position and Orientation, Axis - Angle Representations of Rotation, Viewing Transformations, Chaining the Transformations, Visual Perception: Perception of Depth, Perception of Motion, Perception of Color.

**Module - 4 (Real world and virtual world motions)**

Motion in Real and Virtual Worlds - Velocities and Accelerations- A one-dimensional world, Motion in a 3D world, The Vestibular System, Physics in the Virtual World - Tailoring the Physicsto the Experience, Numerical simulation, Collision detection, Mismatched Motion and Vection.

**Module - 5 (Interaction and Audio)**

Interaction - Motor Programs and Remapping, Locomotion, Manipulation, Social Interaction, Additional Interaction Mechanisms.

Audio- The Physics of Sound, Auditory Rendering- Basic signal processing, Acoustic modeling, Auralization.

**Text Books**

1. VIRTUAL REALITY, Steven M. LaValle, University of Oulu, Cambridge University Press, 2019.
2. Developing Virtual Reality Applications: Foundations of Effective Design, Alan B. Craig, William R. Sherman, Jeffrey D. Will, Morgan Kaufmann Publishers, 1st edition.
3. Understanding virtual Reality-INTERFACE, APPLICATION, AND DESIGN, William R. Sherman, Morgan Kaufmann Publishers, 2nd Edition.

**Reference Books**

1. Gerard Jounghyun Kim, “Designing Virtual Systems: The Structured Approach”, 2005.
2. Doug A Bowman, Ernest Kuijff, Joseph J LaViola, Jr and Ivan Poupyrev, “3D User Interfaces, Theory and Practice”, Addison Wesley, USA, 2005.
3. Oliver Bimber and Ramesh Raskar, “Spatial Augmented Reality: Merging Real and Virtual Worlds”, 2005.
4. Burdea, Grigore C and Philippe Coiffet, “Virtual Reality Technology”, Wiley Interscience, India, 2003.

**Sample Course Level Assessment Questions**

**Course Outcome 1 (CO1):**

1. Write a brief note on virtual reality systems.
2. List Out the application areas where virtual reality is used.
3. Explain areas of application of Virtual Reality.
4. Explain the evolution of VR systems.

**Course Outcome 2 (CO2):**

1. Explain the terms: i) virtual display, ii) Aural display, iii) Haptic display.

2. Write a note on virtual world representations.
3. Explain haptic displays.
4. Explain aural displays.

**Course Outcome 3 (CO3):**

1. Explain about geometric models.
2. List out the advantages of using VR over traditional mediums like TV, movies, or games.
3. How can you change the position and orientation of an object?
4. How does the perception of depth and motion apply to VR?
5. Consider the following 3D triangle,  $((x_1, y_1, z_1), (x_2, y_2, z_2), (x_3, y_3, z_3))$ .  
Apply the translation. Let  $x_t$ ,  $y_t$ , and  $z_t$  be the amount we would like to change the triangle's position.
6. Consider a triangle with the coordinate values  $((10,10), (20,10), (15,15))$ .  
Translate the triangle by  $x_t = -8$  and  $y_t = -7$ .
7. Illustrate with an example how a 2- dimensional matrix can be applied to points.
8. Apply eight possible different 2-dimensional matrices to transform a square face.

**Course Outcome 4 (CO4):**

1. Explain how collision detection happens in the world of motion.
2. Differentiate motions in real world and virtual world.
3. How does a point move in a 1D and 3D world?
4. How is collision detected in a physics engine?
5. What are different types of vection? Explain.

**Course Outcome 5 (CO5):**

1. Briefly explain the interaction mechanisms.
2. Explain the Auralization in detail.
3. How can you implement social interaction in VR?
4. How can you synthesize sounds for VR?

**Model Question paper**

**QP CODE:**

**PAGES:2**

**Reg No: \_\_\_\_\_**

**Name: \_\_\_\_\_**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**FIFTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: CXT 307**

**Course Name: VIRTUAL REALITY**

**Max.Marks:100**

**Duration: 3 Hours**

**PART A**

**Answer all Questions. Each question carries 3 Marks**

1. Write a brief note on virtual reality systems. (3)
2. List out the application areas where virtual reality is used. (3)
3. Explain the terms:  
i) virtual display, ii) Aural display, iii) Haptic display. (3)
4. Write a note on virtual world representations. (3)
5. Consider the following 3D triangle,  $((10,10,10), (10,15,10), (20,15,10))$ , Apply the translation and let  $xt=5$ ,  $yt=6$ , and  $zt=5$  be the amount we would like to change the triangle's position. (3)
6. List out the advantages of using VR over traditional mediums like TV, movies, or games. (3)
7. Explain how collision detection happens in the world of motion. (3)
8. Differentiate motions in the real world and virtual world. (3)
9. Briefly explain the interaction mechanisms. (3)
10. Explain the Auralization. (3)

**Part B**

**(Answer any one question from each module. Each question carries 14 Marks)**

11. Explain the areas of application of Virtual Reality.

**OR**

12. Explain the evolution of VR systems.

13. Explain haptic displays in detail.

**OR**

14. Explain aural displays in detail.

15. Apply eight possible various 2-dimensional matrices to transform a square face. How can you change the position and orientation of an object?

**OR**

16. Explain how does the perception of depth and motion apply to VR. Consider a triangle with the coordinate values ((10,10), (20,10), (15,15)). Translate the triangle by  $x_t = -8$  and  $y_t = -7$ .

17. Use Runge-Kutta Method of Order 4 to solve the following, using a step size of  $h=0.1$  for  $0 \leq x \leq 1$

$$dy/dx = (5x^2 - y) / (e^{(x + y)}), y(0) = 1.$$

**OR**

18. Explain in detail how is collision detected in a physics engine.

19. How can you implement social interaction in VR? Explain.

**OR**

20. How can you synthesize sounds for VR? Explain in detail.

**Teaching Plan**

| <b>Sl. No</b>   | <b>Topic</b>   | <b>No. of Hours<br/>(46 hrs)</b> |

| CXT<br>309 | OBJECT<br>ORIENTED<br>MODELING AND<br>DESIGN | Category | L | T | P | Credit | Year of<br>Introduction |
|------------|--|----------|---|---|---|--------|-------------------------|
|            |  | PCC      | 3 | 0 | 0 | 3      | 2021                    |

**Preamble:** This is a core course in computer science and design. The main objective of this course is to learn how to apply object-oriented concepts to all the stages of the software development life cycle. Object-oriented modeling and design is a way of thinking about problems using models organized around real-world concepts. The fundamental construct is the object, which combines both data structure and behavior.

**Prerequisite:** Basic knowledge about the following topic is assumed: objects, classes, object-oriented concepts, software engineering principles, software development life cycle models.

**Course Outcomes:** After the completion of the course the student will be able to

|     |  |
|-----|--|
| CO1 | Explain object-oriented modeling concepts and components of an object-oriented model. [Cognitive knowledge level: Understand]                          |
| CO2 | Illustrate dynamic and functional models for real time applications. [Cognitive knowledge level: Apply]  |
| CO3 | Use object, dynamic and functional model for analyzing and designing a system. [Cognitive knowledge level: Apply]                                      |
| CO4 | Illustrate the significance of object design models, algorithms and documenting design decisions [Cognitive knowledge level: Apply]                    |
| CO5 | To solve real time problems using various Modeling concepts for managing projects in multidisciplinary environments [Cognitive knowledge level: Apply] |

| Evaluate                |                                    |                       |                                       |
| Create                  |                                    |                       |                                       |

**Mark Distribution**

| <b>Total Marks</b> | <b>CIE Marks</b> | <b>ESE Marks</b> | <b>ESE Duration</b> |
|--------------------|------------------|------------------|---------------------|
| <b>150</b>         | <b>50</b>        | <b>100</b>       | <b>3 hours</b>      |

**Continuous Internal Evaluation Pattern:**Attendance : **10 marks**Continuous Assessment - Test : **25 marks**Continuous Assessment – Assignment : **15 marks****Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 2 sub-divisions and carries 14 marks.

## Syllabus

### CXT 309 OBJECT ORIENTED MODELING AND DESIGN

#### Module - 1 (Object modeling)

Introduction: Object Oriented Development - Modeling Concepts–Object Oriented Methodology. Object Oriented Themes - Abstraction - Encapsulation - Combining Data and Behavior - Sharing - Emphasis on Object Structure.

Object modeling: Objects and Classes, Links and Associations, Advanced links and Association Concepts, Generalization and Inheritance, Grouping Constructs, A Sample Object Model.

#### Module- 2 (Dynamic and Functional modeling)

Dynamic modeling: Events and States, Operations, Nested state diagrams, Concurrency, Advanced Dynamic Modeling Concepts, A sample Dynamic Model, Relationship of Object and Dynamic models. Functional modeling: Functional models, Data Flow Diagrams, Specifying Operations, Constraints, A sample Functional Model.

#### Module - 3 (Analysis and System Design)

Analysis: Object Modeling - Identifying Object Classes - Preparing a Data Dictionary - Identifying Associations. Dynamic Modeling - Preparing a Scenario - Interface Format - Identifying Event - Building a State Diagram. Functional Modeling - Identifying input and Output Values - Building Data Flow Diagram - Describing Functions. System Design: Breaking System into Subsystems, Identifying Concurrency, Allocating Subsystems to Processors and Tasks, Managing Data Stores, Handling of Global Resources, Common Architectural Framework.

#### Module - 4 (Object Design)

Object Design: Overview of Object design, Combining the three models, Designing algorithms, Design optimization, Implementation of control, Adjustment of inheritance, Design of association, Object representation, Physical packaging. Documenting design decisions -Comparison of methodologies.

#### Module - 5 (Other Models)

Advanced models: Booch's Methodology- Notations, models, concepts. Jacobson Methodology-architecture, actors and use-cases, requirement model, Analysis Model, Design model, Implementation model and Test Model-Unified Modeling Language (UML).

#### Text Book

1. Object Oriented Modeling and Design -James Rumbaugh, 1<sup>st</sup> edition, Prentice Hall India

#### Reference Books

1. Object Oriented Analysis and Design with Applications – Grady Booch, third edition, Pearson Education Asia References.
2. Object Oriented Software Engineering – Ivan Jacobson, 3<sup>rd</sup> edition, Pearson Education Asia.
3. Object Oriented Software Engineering – Berno Bruegge, Allen H. Dutoit, 3<sup>rd</sup> edition, Pearson Education Asia
4. Object Oriented Analysis and Design using UML – H. Srimathi, H. Sriram, A. Krishnamoorthy, first edition, Scitech Publications.

5. UML and C++ practical guide to Object Oriented development – Richard C.Lee& William, 2<sup>nd</sup> edition, Prentice Hall India

### **Sample Course Level Assessment Questions**

#### **Course Outcome 1 (CO1):**

1. Describe object modeling.
2. Describe the various stages in object-oriented methodology.

#### **Course Outcome 2 (CO2):**

1. Differentiate between dynamic and functional modeling.
2. Describe events and states.
3. Design a dynamic model with a suitable state diagram for an ATM machine showing various states and events.
4. Design a dynamic model with a suitable state diagram for a programmable thermostat showing various states and events.

#### **Course Outcome 3 (CO3):**

1. Explain steps in analysis of object and dynamic models.
2. Explain common architectural frameworks.
3. Analyze the object model and give a suitable design for the system.
4. Analyze the dynamic and functional model and give a suitable design for the system.

#### **Course Outcome 4 (CO4):**

1. Explain Design Optimization.
2. Explain different steps in object design.
3. You have been tasked with designing a game that involves multiple players interacting with each other in a virtual environment. How would you design the objects and associations necessary to manage the game state, player interactions, and scoring? What are some potential challenges you might encounter when designing these objects and associations?

#### **Course Outcome 5 (CO5):**

1. Describe Booch's Methodology.
2. Write a note on Unified Modeling Language (UML).
3. Using Booch's Methodology represent Bank ATM System with proper notations.

**Model Question paper**

**QP CODE:**

**PAGES:3**

**Reg No: \_\_\_\_\_**

**Name: \_\_\_\_\_**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**FIFTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: CXT309**

**Course Name: Object oriented modeling and design**

**Max.Marks:100**

**Duration: 3 Hours**

**PART A**

**Answer all Questions. Each question carries 3 Marks**

1. Describe object modeling.
2. Explain link attributes and role names.
3. What is an event and state?
4. Explain nested state diagram.
5. Explain how subsystems are allocated to processors and tasks.
6. How data stores are managed in a system?
7. Describe fundamental concepts of the object-oriented world.
8. Explain Unified Modeling Language (UML).
9. What are use cases and actors? Explain the use case diagram for an entry subsystem.
10. Mention the purpose of use case diagram.

**Part B**

**(Answer any one question from each module. Each question carries 14 Marks)**

11. Describe the various stages involved in the object-oriented methodology.

**OR**

12. Explain in detail about the three types of object-oriented models.

13. Describe process and data flows used in data flow diagrams.

**OR**

14. Design a dynamic model with a suitable state diagram for an ATM machine showing various states and events.

15. Analyze the dynamic and functional model and give a suitable design for the system.

**OR**

16. Explain in detail the common architectural frameworks.

17. You have been tasked with designing a game that involves multiple players interacting with each other in a virtual environment. How would you design the objects and associations necessary to manage the game state, player interactions, and scoring? What are some potential challenges you might encounter when designing these objects and associations?

**OR**

18. Describe the approaches to implementation of control in object design.

19. Using Booch's methodology, design Bank ATM System with proper notations.

**OR**

20. Illustrate the sequence diagram symbols and briefly explain the notations.

### Teaching Plan

| Sl. No  | Topic  | No. of Hours<br>(39 hrs.) |
|---|--|---------------------------|
| <b>Module - 1 (Object modeling) 7 Hours</b>                 |  |                           |
| 1.1   | Introduction: what is object oriented? - object oriented development-modeling concepts | 1 Hour                    |
| 1.2   | Object-oriented methodology  | 1 Hour                    |
| 1.3   | Object-oriented themes-abstraction-encapsulation                                       | 1 Hour                    |
| 1.4   | Combining data and behavior- sharing. - emphasis on object structure.                  | 1 Hour                    |
| 1.5   | Object modeling-objects and classes  | 1 Hour                    |
| 1.6   | Links and associations – advanced links and association concepts                       | 1 Hour                    |
| 1.7   | Generalization and inheritance, Grouping constructs – a sample object model            | 1 Hour                    |
| <b>Module - 2 (Dynamic and Functional modeling) 7 Hours</b> |  |                           |
| 2.1   | Dynamic modeling: Events and states – Operations                                       | 1 Hour                    |
| 2.2   | Nested state diagrams – Concurrency  | 1 Hour                    |
| 2.3   | Advanced dynamic modeling concepts   | 1 Hour                    |
| 2.4   | A sample dynamic model – Relationship of Object and Dynamic models                     | 1 Hour                    |
| 2.5   | Functional modeling: Functional models   | 1 Hour                    |
| 2.6   | Data Flow Diagrams – Specifying operations   | 1 Hour                    |
| 2.7   | Constraints – A sample functional model.   | 1 Hour                    |
| <b>Module - 3 (Analysis and System Design) 8 Hours</b>      |  |                           |
| 3.1   | Analysis: Analysis in object modeling.   | 1 Hour                    |
| 3.2   | Analysis in dynamic modeling   | 1 Hour                    |
| 3.3   | Analysis in functional modeling  | 1 Hour                    |

|   |   |        |
|---|---|--------|
| 3.4                                       | System Design: Breaking system into subsystems                | 1 Hour |
| 3.5                                       | Identifying concurrency                                       | 1 Hour |
| 3.6                                       | Allocating subsystems to processors and tasks,                | 1 Hour |
| 3.7                                       | Managing of data stores                                       | 1 Hour |
| 3.8                                       | Handling of global resources- Common architectural frameworks | 1 Hour |
| <b>Module - 4 (Object Design) 8 Hours</b> |   |        |
| 4.1                                       | Overview of Object design                                     | 1 Hour |
| 4.2                                       | Combining the three models                                    | 1 Hour |
| 4.3                                       | Designing algorithms  | 1 Hour |
| 4.4                                       | Design optimization   | 1 Hour |
| 4.5                                       | Implementation of control- Adjustment of inheritance          | 1 Hour |
| 4.6                                       | Design of association- Object representation                  | 1 Hour |
| 4.7                                       | Physical packaging-Documenting design decisions               | 1 Hour |
| 4.8                                       | Comparison of methodologies                                   | 1 Hour |
| <b>Module - 5 (Other Models) 9 Hours</b>  |   |        |
| 5.1                                       | Booch's Methodology- Notations, models, concepts.             | 1 Hour |
| 5.2                                       | Jacobson Methodology- architecture                            | 1 Hour |
| 5.3                                       | Actors and use-cases  | 1 Hour |
| 5.4                                       | Requirement model   | 1 Hour |
| 5.5                                       | Analysis Model  | 1 Hour |
| 5.6                                       | Design model  | 1 Hour |
| 5.7                                       | Implementation model  | 1 Hour |
| 5.8                                       | Test Model  | 1 Hour |
| 5.9                                       | Unified Modeling Language (UML).                              | 1 Hour |

|         |                     |          |   |   |   |        |                      |

**Preamble:** With a dynamic learn-by-doing focus, this laboratory course encourages the students to explore the designing of web application by implementing the relevant and recent techniques. This course challenges the students to exercise their creativity in both programming and designing.

**Prerequisite:** Basic understanding of computer programming, Internet and Database.

|     |   |
|-----|---|
| CO1 | Explore and develop interactive web pages using markup languages.<br>(Cognitive Knowledge Level: Apply)                     |
| CO2 | Implement client-side validation using scripting languages using Javascript and PHP<br>(Cognitive Knowledge Level: Apply)   |
| CO3 | Design and develop web pages and implement databases connectivity using PHP and MySQL<br>(Cognitive Knowledge Level: Apply) |
| CO4 | Develop and execute Client-side & Server-side scripts using CSS, Javascript and PHP.<br>(Cognitive Knowledge Level: Apply)  |
| CO5 | Develop Web Applications using Laravel framework<br>(Cognitive Knowledge Level: Apply)                                      |

### Assessment Pattern

| Bloom's Category | Continuous Assessment Test (Internal Exam) Percentage | End Semester Examination Percentage |
|------------------|---|-------------------------------------|
| Remember         | 20  | 20                                  |
| Understand       | 20  | 20                                  |
| Apply            | 60  | 60                                  |
| Analyse          |   |                                     |
| Evaluate         |   |                                     |
| Create           |   |                                     |

### Mark Distribution

| <b>Total Marks</b> | <b>CIE Marks</b> | <b>ESE Marks</b> | <b>ESE Duration</b> |
|--------------------|------------------|------------------|---------------------|
| <b>150</b>         | <b>75</b>        | <b>75</b>        | <b>3 hours</b>      |

**Continuous Internal Evaluation Pattern:**

Attendance : **15 marks**  
 Continuous Evaluation in Lab : **30 marks**  
 Continuous Assessment Test : **15 marks**  
 Viva-voce : **15 marks**

**Internal Examination Pattern:** The marks will be distributed as Algorithm 30 marks, Program 20 marks, Output 20 marks and Viva 30 marks. Total 100 marks which will be converted out of 15 while calculating Internal Evaluation marks.

**End Semester Examination Pattern:** The marks will be distributed as Algorithm 30 marks, Program 20 marks, Output 20 marks and Viva 30 marks. Total 100 marks will be converted out of 75 for End Semester Examination.

**Fair Lab Record:**

All Students attending the Web Programming Lab should have a Fair Record. The fair record should be produced in the University Lab Examination. Every experiment conducted in the lab should be noted in the fair record. For every experiment in the fair record the right-hand page should contain Experiment Heading, Experiment Number, Date of Experiment, Aim of Experiment, Details of Experiment including algorithm and Result of Experiment. The left-hand page should contain a print out of the code used for the experiment and sample output obtained for a set of input.

**Syllabus**

1. Introduction To Web: Client/Server concepts, Components of Web Application, Types of Web Content, Overview of HTTP - HTTP request – response, Generation of dynamic Web Pages, Application Servers, Web Security.
2. Markup Language (HTML): Formatting and Fonts, Commenting Code, Anchors, Backgrounds, Images, Hyperlinks, Lists, Tables, Frames, HTML Forms.
3. Cascading Style Sheet (CSS): The need for CSS, Basic syntax and structure, Inline Styles, Embedding Style Sheets, Linking External Style Sheets, Backgrounds, Manipulating text, Margins and Padding, Positioning using CSS.
4. Client-Side Scripting using JavaScript: Core features, Data types and Variables, Operators-Expressions and Statements, Functions, Objects, Array, String - Date and Math related Objects, Document Object Model, Event Handling, Form handling and validations.
5. An overview of Relational Database Design: Tables, Attributes, Tuples, Primary keys, Foreign keys, Indexes, DDL Commands – CREATE, ALTER, DROP and TRUNCATE; DML Commands – SELECT, INSERT, UPDATE and DELETE.

6. Server-Side Scripting using PHP: Setting up the environment (Example - XAMP server), PHP Programming basics - Print/echo, Variables and constants, Strings and Arrays, Operators, Control structures and looping structures, Functions, Reading Data in Web Pages, Embedding PHP within HTML, Establishing connectivity with database, Debugging with phpdbg.
7. Web Application development using Laravel, Naming convention, MVC model, Connectivity with Database, Database interaction.
8. Debugging web apps: Browser debugging tools (Any browser web developer tools) –View and change the DOM and CSS, Console, Debug JavaScript, View and debug network activity, Performance tools etc.

### List of Lab Experiments/Exercises

1. Create a simple HTML file to demonstrate the use of different tags. \*
2. Create a HTML file to link to different HTML page which contains images, tables and also link within a page. \*
3. Create a HTML page with different types of frames such as floating frame, navigation frame & mixed frame.
4. Create a HTML file by applying the different styles using inline, external & internal style sheets.
5. Create a registration form using HTML.\*
6. Create a HTML page to explain the use of various predefined functions in a string and math object in java script.\*
7. Generate the calendar using JavaScript code by getting the year from the user.
8. Create a HTML registration form and to validate the form using JavaScript code.\*
9. Create a HTML page to change the background color for every click of a button using JavaScript Event Handling.\*
10. Create a HTML page to display a new image and text when the mouse comes over the existing content in the page using JavaScript Event Handling.
11. Create a HTML page to show online exam using JavaScript.\*
12. Develop a registration form using PHP and do necessary validations.\*
13. Compose Electricity bill from user input based on a given tariff using PHP.\*
14. Build a PHP code to store name of students in an array and display it using print\_r function. Sort and Display the same using assort & arsort functions.\*
15. Build a PHP code to store name of Indian Cricket players in an array and display the same in HTML table.\*
16. Develop a PHP program to connect to a database and retrieve data from a table and show the details in a neat format.\*
17. Develop Web applications using HTML and PHP and deploy.\*
18. Using PHP and MySQL, develop a program to accept book information viz. Accession number, title, authors, edition and publisher from a web page and store the information in a database and to search for a book with the title specified by the user and to display the search results with proper headings.\*
19. Develop a web application using Laravel and test the application on an Application Server. \* (assign as micro project)

*Note: Students can be given a group micro project, so that they learn to work in a team environment. They can also be trained on project management tools.*

\*All programs are mandatory and should be completed in the lab.

**Preamble:** This course is designed to give historical and modern overviews and perspectives on virtual reality. It describes the fundamentals of sensation, perception, technical and engineering aspects of virtual reality systems.

**Prerequisite:** NIL

**Course Outcomes:** After the completion of the course the student will be able to

|     |  |
|-----|--|
| CO1 | [Cognitive knowledge level: Understand]<br>Demonstrate the working of VR gear.                   |
| CO2 | [Cognitive knowledge level: Understand]<br>Understand the use of three.js, blender, Unity3D      |

### Assessment Pattern

| <b>Bloom's Category</b> | <b>Continuous Assessment Test<br/>(Internal Assessment<br/>Percentage)</b> | <b>End Semester Exam<br/>Percentage</b> |
|-------------------------|--|---|
| Remember                | 20   | 20                                      |
| Understand              | 20   | 20                                      |
| Apply                   | 60   | 60                                      |
| Analyze                 |  |   |
| Evaluate                |  |   |
| Create                  |  |   |

#### **Mark Distribution**

| <b>Total<br/>Marks</b> | <b>CIE<br/>Marks</b> | <b>ESE<br/>Marks</b> | <b>ESE<br/>Duration</b> |
|------------------------|----------------------|----------------------|-------------------------|
| 150                    | 75                   | 75                   | 3 hours                 |

#### **Continuous Internal Evaluation Pattern:**

Attendance : 15 marks  
 Continuous Evaluation in lab : 30 marks  
 Continuous Assessment Test : 15 marks  
 Viva Voce : 15 marks

**Internal Examination Pattern :** The marks will be distributed as Algorithm 30 marks, Program 20 marks, Output 20 marks and Viva 30 marks. Total 100 marks which will be converted out of 15 while calculating Internal Evaluation marks.

**End Semester Examination Pattern:** The percentage of marks will be distributed as Algorithm 30 marks, Program 20 marks, Output 20 marks and Viva 30 marks. Total 75 marks.

**Operating system to use in lab**

Linux

|   |                            |
|---|----------------------------|
| <b>Software to use in lab</b>             | Three.js, Unity3D, Blender |
| <b>Programming language to use in lab</b> | Javascript                 |

**Fair Lab Record:**

All Students attending the Virtual Reality Lab should have a Fair Record. The fair record should be produced in the University Lab Examination. Every experiment conducted in the lab should be noted in the fair record. For every experiment in the fair record the right-hand page should contain Experiment Heading, Experiment Number, Date of Experiment, Aim of Experiment, Details of Experiment including algorithm and Result of Experiment. The left-hand page should contain a print out of the code used for the experiment and sample output obtained for a set of Input.

**SYLLABUS**

1. Demonstration of the working VR.
2. Familiarization of Three.js, Phaser.js, babylon.js.
3. Creating game objects and manipulation.
4. Animation and interaction.
5. Introduction to Unity3D.

Lab can make use of either Three.js or Enable3d.

For university examinations students can use the references of the library. Questions should be created in such a way that it explores the students' understanding of the concept.

**PRACTICE QUESTIONS**

**List of Exercises/Experiments:**

1. Demonstration of the working of HTC Vive, Google Cardboard, Google Daydream and Samsung gear VR.
2. Familiarization of Three.js, Phaser.js, babylon.js.
3. Develop a scene that includes a cube, plane and sphere. Create a new material and texture separately for three Game objects. Change the colour, material and texture of each Game object separately in the scene. Write a program in visual studio to change the colour and material/texture of the game objects dynamically on button click.

4. Develop a scene that includes a sphere and plane. Apply Rigid body component, material and Box collider to the game Objects. Write a program to grab and throw the sphere.
5. Create an immersive environment (laboratory/ battlefield/ tennis court) with only static game objects. 3D game objects can be created using Blender or open source alternatives.
6. Include animation, sound and interaction in the immersive environment created.
7. Create your own runner game using Unity3D [using template] - add your own assets, features like increase/ decrease player speed etc.
8. Mini Project - Create a game from scratch using Unity3D or Javascript.

**Preamble:** This course provides fundamental knowledge in the Software Development Process. It covers Software Development, Quality Assurance and Project Management concepts. This course enables the learners to apply state of the art industry practices in Software development.

**Prerequisite:** Basic understanding of Object Oriented Design and Development.

**Course Outcomes:** After the completion of the course the student will be able to

|     |   |
|-----|---|
| CO1 | Differentiate Traditional and Agile Software Development approaches ( <b>Cognitive Knowledge Level: Understand</b> )  |
| CO2 | Prepare Software Requirement <b>Specification</b> and Software Design for a given problem. ( <b>Cognitive Knowledge Level: Apply</b> )  |
| CO3 | Justify the significance of design patterns and licensing terms in software development, prepare testing, maintenance and DevOps strategies for a project. ( <b>Cognitive Knowledge Level: Apply</b> )  |
| CO4 | Make use of software project management concepts while planning, estimation, scheduling, tracking and change management of a project, with proper application of SCRUM, Kanban and Lean frameworks. ( <b>Cognitive Knowledge Level: Apply</b> ) |
| CO5 | Utilize SQA practices, Process Improvement techniques and Technology improvements <b>namely</b> cloud based software model and containers & microservices in a Software Development Process. ( <b>Cognitive Knowledge Level: Apply</b> )        |

**Continuous Internal Evaluation Pattern:**

Attendance : **10 marks**

Continuous Assessment Tests : **25 marks**

Continuous Assessment Assignment : **15 marks** ( Each student shall identify a software development problem and prepare Requirements Specification, Design Document, Project Plan and Test case documents for the identified problem as the assignment. )

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks.

First Internal Examination shall be preferably conducted after completing the first half of the syllabus and the Second Internal Examination shall be preferably conducted after completing the remaining part of the syllabus.

There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly covered module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly covered module), each with 7 marks. Out of the 7 questions in Part B, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have a maximum of 2 subdivisions and carries 14 marks.

**Syllabus****Module 1 : Introduction to Software Engineering (8 hours)**

Introduction to Software Engineering - Professional software development, Software engineering ethics. Software process models - The waterfall model, Incremental development. Process activities - Software specification, Software design and implementation, Software validation, Software evolution. Coping with change - Prototyping, Incremental delivery, Boehm's Spiral Model. Agile software development - Agile methods, agile manifesto - values and principles. Agile development techniques, Agile Project Management. Case studies : An insulin pump control system. Mentcare - a patient information system for mental health care.

**Module 2 : Requirement Analysis and Design (10 hours)**

Functional and non-functional requirements, Requirements engineering processes. Requirements elicitation, Requirements validation, Requirements change, Traceability Matrix. Developing use cases, Software Requirements Specification Template, Personas, Scenarios, User stories, Feature identification. Design concepts - Design within the context of software engineering, Design Process, Design concepts, Design Model. Architectural Design - Software Architecture, Architectural Styles, Architectural considerations, Architectural Design Component level design - What is a component?, Designing Class-Based Components, Conducting Component level design, Component level design for web-apps. Template of a Design Document as per "IEEE Std 1016-2009 IEEE Standard for Information Technology Systems Design Software Design Descriptions". Case study: The Ariane 5 launcher failure.

**Module 3 : Implementation and Testing (12 hours)**

Object-oriented design using the UML, Design patterns, Implementation issues, Open-source development - Open-source licensing - GPL, LGPL, BSD. Review Techniques - Cost impact of Software Defects, Code review and statistical analysis. Informal Review, Formal Technical Reviews, Post-mortem evaluations. Software testing strategies - Unit Testing, Integration Testing, Validation testing, System testing, Debugging, White box testing, Path testing, Control Structure testing, Black box testing, Testing Documentation and Help facilities. Test automation, Test-driven development, Security testing. Overview of DevOps and Code Management - Code management, DevOps automation, CI/CD/CD. Software Evolution - Evolution processes, Software maintenance.

**Module 4 : Software Project Management (8 hours)**

Software Project Management - Risk management, Managing people, Teamwork. Project Planning, Software pricing, Plan-driven development, Project scheduling, Agile planning. Estimation techniques, COCOMO cost modeling. Configuration management, Version management, System building, Change management, Release management, Agile software management - SCRUM framework. Kanban methodology and lean approaches.

**Module 5 : Software Quality and Process Improvement (6 hours)**

Software Quality, Software Quality Dilemma, Achieving Software Quality Elements of Software Quality Assurance, SQA Tasks , Software measurement and metrics. Software Process Improvement(SPI), SPI Process CMMI process improvement framework, ISO 9001:2000 for Software.

### Course Level Assessment Questions

#### Course Outcome 1 (CO1):

1. What are the advantages of an incremental development model over a waterfall model?
2. Compare agile software development with traditional software development?

#### Course Outcome 2 (CO2):

1. How to prepare a software requirement specification?
2. Differentiate between Architectural design and Component level design.
3. How do agile approaches help software developers to capture and define the user requirements effectively?
4. What is the relevance of the SRS specification in software development?
5. Prepare a use case diagram for a library management system.

#### Course Outcome 3 (CO3):

1. Differentiate between the different types of software testing strategies.
2. What are the benefits of DevOps?
3. How do design patterns help software architects communicate the design of a complex system effectively?
4. What are the proactive approaches one can take to optimise efforts in the testing phase?

#### Course Outcome 4 (CO4):

1. What are the activities involved in software project management?
2. What is the need for SCRUM, Kanban and Lean methodologies?
3. What are the benefits of rolling level planning in software project management and how would you implement it?
4. How would you assess the risks in your software development project? How would you plan for risk mitigation and contingency?

#### Course Outcome 5 (CO5):

1. What is the importance of Software Process improvement?
2. How will retrospectives help in improving the software development process?
3. What are the important skills required for the SQA role?
4. How would you use project history data as a prediction tool to plan future projects?

**Model Question Paper**

**QP CODE:**

**Reg No:** \_\_\_\_\_

**Name :** \_\_\_\_\_

**PAGES : 3**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**FIFTH SEMESTER B.TECH DEGREE EXAMINATION(MINOR), MONTH & YEAR**

**Course Code: CST 381**

**Course Name: Concepts in Software Engineering**

**Duration: 3 Hrs**

**Max. Marks : 100**

**PART A**

**Answer all Questions. Each question carries 3 Marks**

1. Explain why professional software that is developed for a customer is not simply the programs that have been developed and delivered
2. Incremental software development could be very effectively used for customers who do not have a clear idea about the systems needed for their operations. Discuss.
3. Identify and briefly describe four types of requirements that may be defined for a computer based system.
4. Describe software architecture in your own words.
5. What are the major differences between GPL and LGPL?
6. Compare between white box testing and black box testing.
7. What is the importance of risk management in software project management?
8. Explain COCOMO cost estimation model
9. Describe the software quality dilemma in your own words
10. Which are the levels of the CMMI model?

**(10x3=30)**

**Part B**

**(Answer any one question from each module. Each question carries 14 marks)**

11. (a) Compare between waterfall model and spiral model (8)

(b) Explain Agile methods and Agile manifesto (6)

**OR**

12. (a) Explain software process activities (7)

(b) Explain Agile Development techniques and Agile Project Management. (7)

13. (a) What are functional and nonfunctional requirements? Imagine that you are developing a library management software for your college, identify at least 8 functional requirements and 4 nonfunctional requirements. (10)

(b) What are the contents of a software requirement specification? (4)

**OR**

14. (a) Explain Personas, Scenarios, User stories and Feature identification? (8)

(b) Compare between Software Architecture design and Component level design (6)

15. (a) Describe the formal and informal review techniques in detail. (6)

(b) Explain various software testing strategies. (8)

**OR**

16. (a) Explain DevOps CI/CD/CD in detail. (8)

(b) Explain test driven development. (6)

17. (a) What is a critical path and demonstrate its significance in a project schedule with the help of a sample project schedule. (6)

(b) Explain plan driven development and project scheduling (6)

OR

18. (a) Explain the SCRUM framework. (8)
- (b) What is algorithmic cost modeling? What problems does it suffer from when compared with other approaches to cost estimation? (6)
19. (a) Explain elements of Software Quality Assurance and SQA Tasks. (8)
- (b) Explain the SPI process. (6)
- OR
20. (a) Compare between CMMI and ISO 9001:2000 (8)
- (b) Compare Quality Control and Quality Assurance. (6)

| <b>Teaching Plan [44 hours]</b>                                  |   |              |

**Preamble:** This course enables the learners to understand the fundamental concepts and algorithms in machine learning. The course covers the standard and most popular supervised learning algorithms such as linear regression, logistic regression, decision trees, Bayesian learning & the naive Bayes algorithm, support vector machines & kernels, basic clustering algorithms and dimensionality reduction methods. This course helps the students to provide machine learning based solutions to real world problems.

**Prerequisite:** Familiarity with basics in linear algebra, probability and Python programming.

| Course Outcomes |   |
|-----------------|---|
| CO1             | Illustrate Machine Learning concepts and basic parameter estimation methods. (Cognitive Knowledge Level: Apply)                             |
| CO2             | Demonstrate supervised learning concepts (regression, linear classification). (Cognitive Knowledge Level: Apply)                            |
| CO3             | Illustrate the concepts of Multilayer neural network and Support Vector Machine (Cognitive Knowledge Level: Apply)                          |
| CO4             | Describe unsupervised learning concepts and dimensionality reduction techniques. (Cognitive Knowledge Level: Apply)                         |
| CO5             | Solve real life problems using appropriate machine learning models and evaluate the performance measures (Cognitive Knowledge Level: Apply) |

**Assessment Pattern**

| Bloom's Category | Continuous Assessment Tests |                    | End Semester Examination Marks |
|------------------|-----------------------------|--------------------|--------------------------------|
|                  | Test1 (Percentage)          | Test2 (Percentage) |                                |
| Remember         | 30                          | 30                 | 30                             |
| Understand       | 30                          | 30                 | 30                             |
| Apply            | 40                          | 40                 | 40                             |
| Analyse          |                             |                    |                                |
| Evaluate         |                             |                    |                                |
| Create           |                             |                    |                                |

**Mark Distribution**

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 hours      |

**Continuous Internal Evaluation Pattern:**

Attendance : 10 marks  
 Continuous Assessment Tests : 25 marks

Continuous Assessment Assignment : **15 marks**

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks

First Internal Examination shall be preferably conducted after completing the first half of the syllabus and the Second Internal Examination shall be preferably conducted after completing remaining part of the syllabus.

There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly covered module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly covered module), each with 7 marks. Out of the 7 questions in Part B, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

**Syllabus**

**Module-1 (Overview of machine learning)**

Machine learning paradigms-supervised, semi-supervised, unsupervised, reinforcement learning. Basics of parameter estimation - maximum likelihood estimation(MLE) and maximum a posteriori estimation(MAP). Introduction to Bayesian formulation.

**Module-2 (Supervised Learning)**

Regression - Linear regression with one variable, Linear regression with multiple variables, solution using gradient descent algorithm and matrix method, basic idea of overfitting in regression. Linear Methods for Classification- Logistic regression, Perceptron, Naive Bayes, Decision tree algorithm ID3.

**Module-3 (Neural Networks (NN) and Support Vector Machines (SVM))**

NN - Multilayer feed forward network, Activation functions (Sigmoid, ReLU, Tanh), Backpropagation algorithm.

SVM - Introduction, Maximum Margin Classification, Mathematics behind Maximum Margin Classification, Maximum Margin linear separators, soft margin SVM classifier, non-linear SVM, Kernels for learning non-linear functions, polynomial kernel, Radial Basis Function(RBF).

#### **Module-4 (Unsupervised Learning)**

Clustering - Similarity measures, Hierarchical Agglomerative Clustering, K-means partitional clustering, Expectation maximization (EM) for soft clustering. Dimensionality reduction – Principal Component Analysis, factor Analysis, Multidimensional scaling, Linear Discriminant Analysis.

#### **Module-5 (Classification Assessment)**

Classification Performance measures - Precision, Recall, Accuracy, F-Measure, Receiver Operating Characteristic Curve(ROC), Area Under Curve(AUC. Bootstrapping, Cross Validation, Ensemble methods, Bias-Variance decomposition. Case Study: Develop a classifier for face detection.

### Sample Course Level Assessment Questions

#### Course Outcome1(CO1):

1. A coin is tossed 100 times and lands heads 62 times. What is the maximum likelihood estimate for  $\theta$ , the probability of heads.
2. Suppose data  $x_1, \dots, x_n$  are independent and identically distributed drawn from an exponential distribution  $\text{exp}(\lambda)$ . Find the maximum likelihood for  $\lambda$ .
3. Suppose  $x_1, \dots, x_n$  are independent and identically distributed(iid) samples from a distribution with density

$$f_X(x|\theta) = \begin{cases} \frac{\theta x^{\theta-1}}{3^\theta}, & 0 \leq x \leq 3 \\ 0, & \text{otherwise} \end{cases}$$

Find the maximum likelihood estimate(MLE) for  $\theta$ .

4. Find the maximum likelihood estimator (MLE) and maximum a posteriori (MAP) estimator for the mean of a univariate normal distribution. Assume that we have  $N$  samples,  $x_1, \dots, x_N$  independently drawn from a normal distribution with known variance  $\sigma^2$  and unknown mean  $\mu$  and the prior distribution for the mean is itself a normal distribution with mean  $\nu$  and variance  $\beta^2$ . What happens to the MLE and MAP estimators as the number of samples goes to infinity.

#### Course Outcome 2 (CO2):

1. Explain the difference between (batch) gradient descent and stochastic gradient descent. Give an example of when you might prefer one over the other.
2. Suppose that you are asked to perform linear regression to learn the function that outputs  $y$ , given the  $D$ -dimensional input  $x$ . You are given  $N$  independent data points, and that all the  $D$  attributes are linearly independent. Assuming that  $D$  is around 100, would you prefer the closed form solution or gradient descent to estimate the regressor?
3. Suppose you have a three class problem where class label  $y \in 0, 1, 2$  and each training example  $X$  has 3 binary attributes  $X_1, X_2, X_3 \in 0, 1$ . How many parameters (probability distribution) do you need to know to classify an example using the Naive Bayes classifier?

#### Course Outcome 3 (CO3):

1. What are support vectors and list any three properties of the support vector classifier solution?
2. Why do you use kernels to model a projection from attributes into a feature space, instead of simply projecting the dataset directly?
3. Describe how Support Vector Machines can be extended to make use of kernels. Illustrate with reference to the Gaussian kernel  $K(x, y) = e^{-z}$ , where  $z = (x-y)^2$ .

4. Briefly explain one way in which using tanh instead of logistic activations makes optimization easier.
5. ReLU activation functions are most used in neural networks instead of the tanh activation function. Draw both activation functions and give a) an advantage of the ReLU function compared to the tanh function. b) a disadvantage of the ReLU function compared to the tanh function.

**Course Outcome 4(CO4):**

1. Describe cluster analysis? Identify two applications where cluster analysis can be applied to multimedia data?
2. Given two objects represented by the tuples (22, 1, 42, 10) and (20, 0, 36, 8):
  - (i) Compute the Euclidean distance between the two objects.
  - (ii) Compute the Manhattan distance between the two objects.
3. Use PCA to reduce the dimension from 2 to 1 for the design matrix  $X$ .

$$X = \begin{bmatrix} 6 & -4 \\ -3 & 5 \\ -2 & 6 \\ 7 & -3 \end{bmatrix}$$

4. What is Principal Component Analysis (PCA)? Which eigen value indicates the direction of largest variance?
5. Suppose that one runs a principal component analysis on a data set and tells that the percentage of variance explained by the first 3 components is 80%. How is this percentage of variance explained?

**Course Outcome 5 (CO5):**

1. Suppose that you are contacted by a food processing company that wants you to develop a classifier that detects whether a rat is present in an image. You collect a large dataset of images by crawling the web, and have annotators determine which images contain rats. This set of images can then be used as the training set for your classifier.
  - a. Suggest a machine learning method to use for this classification task and evaluate its performance.
  - b. After you have delivered your solution to the company, they get back to you and complain that when they evaluate on a new test set, they get precision and recall values that are much lower than what you reported to them. Explain what might have gone wrong and propose remedial measures .
2. A real estate firm would like to build a system that predicts the sale prices of a house. They create a spreadsheet containing information about 1,500 house sales in the Kochi

area. In addition to the price, there are 10 features describing the house, such as number of bedrooms, total indoor area, lot area, a swimming pool, location, etc. Explain how you would implement a machine learning model that would solve this prediction task. Give all steps you would carry out when developing it. Explain why the model you built is probably useless in the long run.

3. For a classifier, the confusion matrix is given by:

|   |   |   |
|---|---|---|
|   | + | - |
| + | 9 | 9 |
| - | 1 | 5 |

What is the precision, recall and accuracy of that classifier?

**Model Question Paper**

QP CODE:

PAGES:3

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY  
FIFTH SEMESTER B.TECH DEGREE EXAMINATION(MINOR), MONTH &  
YEAR**

**Course Code: CST 383**

**Course Name: CONCEPTS IN MACHINE LEARNING**

**Max.Marks:100**

**Duration: 3**

**Hours**

**PART A**

**Answer all Questions. Each question carries 3 Marks**

1. Define supervised learning? Name special cases of supervised learning depending on whether the inputs/outputs are categorical, or continuous.
2. Differentiate between Maximum Likelihood estimation (MLE) and Maximum a Posteriori (MAP) estimation?
3. What is overfitting and why is it a problem? Give an example of a method to reduce the risk of overfitting.
4. Specify the basic principle of gradient descent algorithm.
5. Suppose that you have a linear support vector machine(SVM) binary classifier. Consider a point that is currently classified correctly, and is far away from the decision boundary. If you

- remove the point from the training set, and re-train the classifier, will the decision boundary change or stay the same? Justify your answer.
6. Mention the primary motivation for using the kernel trick in machine learning algorithms?
  7. Expectation maximization (EM) is designed to find a maximum likelihood setting of the parameters of a model when some of the data is missing. Does the algorithm converge? If so, do you obtain a locally or globally optimal set of parameters?
  8. Illustrate the strength and weakness of k-means algorithm.
  9. Classifier A attains 100% accuracy on the training set and 70% accuracy on the test set. Classifier B attains 70% accuracy on the training set and 75% accuracy on the test set. Which one is a better classifier. Justify your answer.
  10. How does bias and variance trade-off affect machine learning algorithms?

(10x3=30)

**Part B**

**Answer any one Question from each module. Each question carries 14 Marks**

11. a) Suppose that  $X$  is a discrete random variable with the following probability mass function: where  $0 \leq \theta \leq 1$  is a parameter. The following 10 independent observations

|        |             |            |                   |                  |
|--------|-------------|------------|-------------------|------------------|
| $X$    | 0           | 1          | 2                 | 3                |
| $P(X)$ | $2\theta/3$ | $\theta/3$ | $2(1 - \theta)/3$ | $(1 - \theta)/3$ |

were taken from such a distribution:  $(3, 0, 2, 1, 3, 2, 1, 0, 2, 1)$ . What is the maximum likelihood estimate of  $\theta$ . (6)

- b) A gamma distribution with parameters  $\alpha, \beta$  has the following density function, where  $\Gamma(t)$  is the gamma function.

$$p(x) = \frac{\beta^\alpha}{\Gamma(\alpha)} x^{\alpha-1} e^{-\beta x}$$

If the posterior distribution is in the same family as the prior distribution, then we say that the prior distribution is the conjugate prior for the likelihood function. Using the Gamma distribution as a prior, show that the Exponential distribution is a conjugate prior of the Gamma distribution. Also, find the maximum a posteriori estimator for the parameter of the Exponential distribution as a function of  $\alpha$  and  $\beta$ . (8)

OR

12. a) Traffic between 8AM and 9AM at a certain place was measured by counting the number of vehicles that passed at that time. Suppose the counts follow a Poisson process. A random sample of 9 observations was collected, having observed the following number of vehicles: (95, 100, 80, 70, 110, 98, 97, 90, 70). Derive the maximum likelihood estimator for the

average number of vehicles that pass by that place between 8 AM and 9 AM, and compute the corresponding estimate using the given sample. (7)

b) Find the maximum a posteriori (MAP) estimator for the mean of a univariate normal distribution. Assume that we have  $N$  samples,  $x_1, \dots, x_N$  independently drawn from a normal distribution with known variance  $\sigma^2$  and unknown mean  $\mu$  and the prior distribution for the mean is itself a normal distribution with mean  $\nu$  and variance  $\beta^2$ . (7)

13.a) Derive the gradient descent training rule assuming for the target function  $o_d = w_0 + w_1x_1 + \dots + w_nx_n$ . Define explicitly the squared cost/error function  $E$ , assuming that a set of training examples  $D$  is provided, where each training example  $d \in D$  is associated with the target output  $t_d$ . (10)

b) How can we interpret the output of a two-class logistic regression classifier as a probability? (4)

OR

14. a) In a two-class logistic regression model, the weight vector  $w = [4, 3, 2, 1, 0]$ . We apply it to some object that we would like to classify; the vectorized feature representation of this object is  $x = [-2, 0, -3, 0.5, 3]$ . What is the probability, according to the model, that this instance belongs to the positive class? (6)

b) The following dataset can be used to train a classifier that determines whether a given person is likely to own a car or not. There are three features: education level (primary, secondary, or university); residence (city or country); gender (female, male).

| education | residence | gender | has car? |
|-----------|-----------|--------|----------|
| sec       | country   | female | yes      |
| univ      | country   | female | yes      |
| prim      | city      | male   | no       |
| univ      | city      | male   | no       |
| sec       | city      | female | no       |
| sec       | country   | male   | yes      |
| prim      | country   | female | yes      |
| univ      | country   | male   | yes      |

Find the root attribute and justify your answer (8)

15. a) Consider a support vector machine whose input space is 2-D, and the inner products are computed by means of the kernel  $K(\mathbf{x}, \mathbf{y}) = (\mathbf{x} \cdot \mathbf{y} + 1)^2 - 1$ , where  $\mathbf{x} \cdot \mathbf{y}$  denotes the ordinary inner product. Show that the mapping to feature space that is implicitly defined by this kernel is the mapping to 5-D given by (10)

$$\mathbf{x} = \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} \rightarrow \phi(\mathbf{x}) = \begin{bmatrix} x_1^2 \\ x_2^2 \\ \sqrt{2} x_1 x_2 \\ \sqrt{2} x_1 \\ \sqrt{2} x_2 \end{bmatrix}$$

b) What is the basic idea of a Support Vector Machine? (4)  
OR

16. a) Explain how back propagation can be used to solve XOR problem which is not linearly separable. (8)  
b) Consider the following one dimensional training data set, 'x' denotes negative examples and 'o' positive examples. The exact data points and their labels are given in the table. Suppose a SVM is used to classify this data. Indicate which are the support vectors and mark the decision boundary. Find the equation of the hyperplane. (6)

17. a) Suppose that we have the following data (one variable). Use single linkage Agglomerative clustering to identify the clusters.  
Daa: (2, 5, 9, 15, 16, 18, 25, 33, 33, 45). (8)
- b) Given two objects represented by the tuples (22, 1, 42, 10) and (20, 0, 36, 8):  
(i) Compute the Euclidean distance between the two objects.  
(ii) Compute the Manhattan distance between the two objects.

(iii) Compute the Minkowski distance between the two objects, using  $p = 3$  (6)

OR

18. a) Suppose that we have the following data:

|          |          |          |          |          |          |          |          |          |          |
|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|
| <i>a</i> | <i>b</i> | <i>c</i> | <i>d</i> | <i>e</i> | <i>f</i> | <i>g</i> | <i>h</i> | <i>i</i> | <i>j</i> |
| (2,0)    | (1,2)    | (2,2)    | (3,2)    | (2,3)    | (3,3)    | (2,4)    | (3,4)    | (4,4)    | (3,5)    |

Identify the cluster by applying the k-means algorithm, with  $k = 2$ . Try using initial cluster centers as far apart as possible. (10)

b) List the steps involved in Principal Component Analysis. (4)

19. a) Suppose the dataset had 9700 cancer-free images from 10000 images from cancer patients. Find precision, recall and accuracy? Is it a good classifier? Justify. (8)

| Actual Class\<br>Predicted class | cancer = yes | cancer = no | Total |
|----------------------------------|--------------|-------------|-------|
| cancer = yes                     | 90           | 210         | 300   |
| cancer = no                      | 140          | 9560        | 9700  |
| Total                            | 230          | 9770        | 10000 |

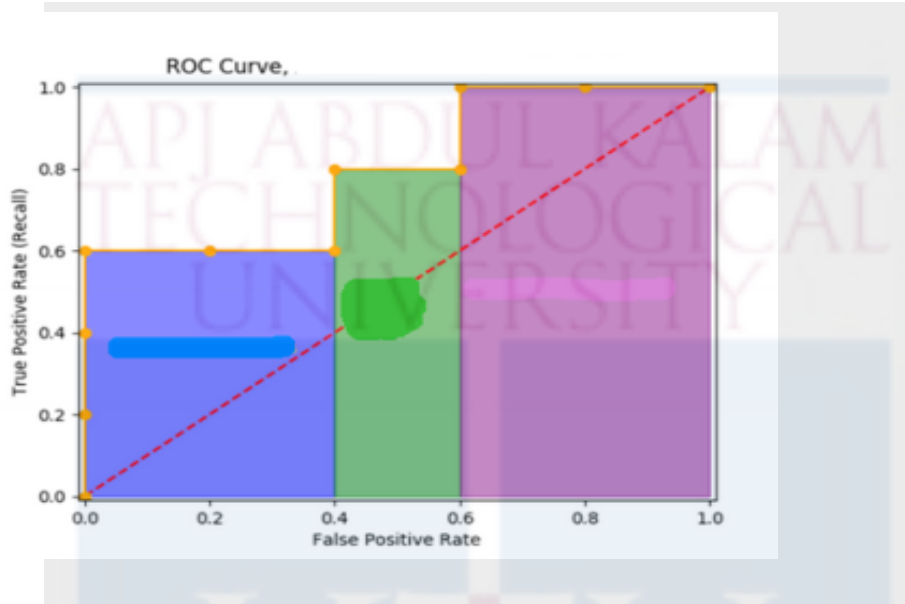

b) Suppose that you have a classification problem where our feature representation contains about 10,000,000 features. We would like to develop a classifier that can be deployed in a mobile phone, so preferably it should have a small memory footprint. Discuss one solution for how this can be done. (6)

OR

20. a) What are ROC space and ROC curve in machine learning? In ROC space, which points correspond to perfect prediction, always positive prediction and always negative prediction? Why? (6)

b) Suppose there are three classifiers A,B and C. The (FPR, TPR) measures of the three classifiers are as follows – A (0, 1), B (1, 1), C (1,0.5). Which can be considered as a perfect classifier? Justify your answer. (4)

c) Given the following ROC Curve? Find the AUC? (4)

**Teaching Plan**

| No  | Contents   | No of Lecture Hrs |
|---|--|-------------------|
| <b>Module 1 :Overview of machine learning (7 hours)</b> |  |                   |
| 1.1   | Supervised, semi-supervised, unsupervised learning, reinforcement learning (Text Book (TB) 1: Chapter 1) | 1 hour            |
| 1.2   | Maximum likelihood estimation(MLE) (TB 1: Section 4.2)   | 1 hour            |
| 1.3   | Maximum likelihood estimation (MLE)- example (TB 1: Section 4.2)   | 1 hour            |
| 1.4   | Maximum a posteriori estimation(MAP) (TB 4: Section 6.2)   | 1 hour            |
| 1.5   | Maximum a posteriori estimation(MAP)-example (TB 4: Section 6.2)   | 1 hour            |
| 1.6   | Bayesian formulation (TB 1: Section 14.1, 14.2)  | 1 hour            |
| 1.7   | Bayesian formulation -example (TB 1: Section 14.1, 14.2)   | 1 hour            |
| <b>Module 2 : Supervised Learning (8 hours)</b>         |  |                   |

|   |  |        |
|---|--|--------|
| 2.1   | Linear regression with one variable (TB 1: Section 2.6)  | 1 hour |
| 2.2   | Multiple variables, Solution using gradient descent algorithm and matrix method (No derivation required) (TB 1: Section 5.8) | 1 hour |
| 2.3   | Overfitting in regression, Lasso and Ridge regularization  | 1 hour |
| 2.4   | Logistic regression  | 1 hour |
| 2.5   | Perceptron   | 1 hour |
| 2.6   | Naive Bayes (TB 2: Section 18.2)   | 1 hour |
| 2.7   | Decision trees (TB 2: Chapter 19)  | 1 hour |
| 2.8   | Decision trees- ID3 algorithm (TB 2: Chapter 19)   | 1 hour |
| <b>Module 3 : Neural Networks and Support Vector Machines (TB 2: Chapter 21)<br/>(11 hours)</b> |  |        |
| 3.1   | Multilayer Feed forward Network, Activation Functions (Sigmoid, ReLU, Tanh)  | 1 hour |
| 3.2   | Back Propagation Algorithm   | 1 hour |
| 3.3   | Illustrative Example for Back Propagation  | 1 hour |
| 3.4   | Introduction, Maximum Margin Hyperplane,   | 1 hour |
| 3.5   | Mathematics behind Maximum Margin Classification   | 1 hour |
| 3.6   | Formulation of maximum margin hyperplane and solution  | 1 hour |
| 3.7   | Soft margin SVM  | 1 hour |
| 3.8   | Solution of Soft margin SVM  | 1 hour |
| 3.9   | Non-linear SVM   | 1 hour |
| 3.10  | Kernels for learning non-linear functions and properties of kernel functions.  | 1 hour |
| 3.11  | Example Kernels functions- Linear, RBF, Polynomial.  | 1 hour |
| <b>Module 4 : Unsupervised Learning (10 hours)</b>  |  |        |
| 4.1   | Similarity measures- Minkowski distance measures( Manhattan, Euclidean), Cosine Similarity                                   | 1 hour |
| 4.2   | Clustering - Hierarchical Clustering (TB 2: Chapter 14)  | 1 hour |
| 4.3   | K-means partitional clustering (TB 2: Chapter 13)  | 1 hour |
| 4.4   | Expectation maximization (EM) for soft clustering (TB 2: Chapter 13)   | 1 hour |
| 4.5   | Expectation maximization (EM) for soft clustering (TB 2: Chapter 13)   | 1 hour |

|   |   |        |
|---|---|--------|
| 4.6   | Dimensionality reduction – Principal Component Analysis (TB 1: Section 6.3)                   | 1 hour |
| 4.7   | Dimensionality reduction – Principal Component Analysis (TB 1: Section 6.3)                   | 1 hour |
| 4.8   | Factor Analysis (TB 1: Section 6.4)   | 1 hour |
| 4.9   | Multidimensional scaling (TB 1: Section 6.5)  | 1 hour |
| 4.10  | Linear Discriminant Analysis (TB 1: Section 6.6)  | 1 hour |
| <b>Module 5 : Classification Assessment (8 hours)</b> |   |        |
| 5.1   | Performance measures - Precision, Recall, Accuracy, F-Measure, ROC, AUC. (TB 2: Chapter 22.1) | 1 hour |
| 5.2   | Boot strapping, Cross validation  | 1 hour |
| 5.3   | Ensemble methods- bagging   | 1 hour |
| 5.4   | Ensemble methods- boosting  | 1 hour |
| 5.5   | Bias-Variance decomposition (TB 2: Chapter 22.3)  | 1 hour |
| 5.6   | Bias-Variance decomposition (TB 2: Chapter 22.3)  | 1 hour |
| 5.7   | Face detection (TB 3: Chapter 5 Section Application: A Face Detection Pipeline)               | 1 hour |
| 5.8   | Face detection (TB 3: Chapter 5 Section Application: A Face Detection Pipeline)               | 1 hour |

|                    |   |                 |          |          |          |               |                                 |

**Preamble:**

The purpose of this course is to make awareness about the basic concepts in game and strategies involved in the game design. This course helps the learner to understand various design techniques to develop new games. The study of computer game design enables the development of algorithms for creating various games. This is the course for awarding B.Tech. Minor in Computer Science and Design with specialization in Game Design.

**Prerequisite:** A sound knowledge of Graphics and a programming language.

**Course Outcomes:** After the completion of the course the student will be able to:

| <b>CO#</b> | <b>CO</b>  |
|------------|--|
| <b>CO1</b> | Use the game design principles to develop interactive games.<br>(Cognitive Knowledge level: Apply) |
| <b>CO2</b> | Develop and frame systems with levels of interactivity.<br>(Cognitive Knowledge level: Apply)      |
| <b>CO3</b> | Summarize games and schemas in game development.<br>(Cognitive Knowledge level: Understand)        |
| <b>CO4</b> | Design games which implement programming with OpenGL.<br>(Cognitive Knowledge level: Apply)        |
| <b>CO5</b> | Design graphical objects using OpenGL for game design.<br>(Cognitive Knowledge level: Apply)       |

### Assessment Pattern

| Bloom's Category | Continuous Assessment Tests |            | End Semester Examination Marks (%) |
|------------------|-----------------------------|------------|------------------------------------|
|                  | Test 1 (%)                  | Test 2 (%) |                                    |
| Remember         | 30                          | 30         | 30                                 |
| Understand       | 30                          | 30         | 30                                 |
| Apply            | 40                          | 40         | 40                                 |
| Analyze          |                             |            |                                    |
| Evaluate         |                             |            |                                    |
| Create           |                             |            |                                    |

### Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 hours      |

### Continuous Internal Evaluation Pattern:

|   |          |
|---|----------|
| Attendance  | 10 marks |
| Continuous Assessment Tests (Average of Series Tests - 1 & 2) | 25 marks |

Continuous Assessment Assignment

**15 marks****Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 full questions from each module of which student should answer any one full question. Each question can have a maximum of 2 subdivisions and carries 14 marks.

**Syllabus****Module - 1**

Introduction, Game Design Schemas, Game Design Fundamentals, Design Process – iterative design  
Game design exercises – creation modification analysis. Case study: Tic Tac Toe.

**Module - 2**

Introduction to systems & Interactivity-Elements of System-Framing of system-Open and Closed  
System-Defining interactivity-Multivalent Model of Interactivity -interaction and choice.

**Module - 3**

Defining games – play and games-Role playing games-Defining digital games-Traits of digital games  
Primary Schemas-Formal schema-Experimental Schema-Contextual Schema-Defining Rules,  
Quality of Rules-Three kinds of rules.

**Module - 4**

Introduction to OpenGL-OpenGL architecture – OpenGL utility Library – Glut, Simulation Games-  
First-Person Shooters, Real-time Strategy Games-Turn-Based Strategy Games- Role-Playing Games-  
Puzzle Games-Multi User Dungeons.

## Module - 5

Typical Game Loop-Getting started with OpenGL -Initialization – Context Types and Window Options-Display Modes- Window Creation- Function Call backs -Clear screen, Main loop- resizing- rendering – adding Glew, Vertices and Shapes -Buffer Objects- Introduction to shaders-Creating Buffer Objects. Creating rectangles with OpenGL.

### Text Book

1. OpenGL Book, <https://openglbook.com/the-book.html>.
2. Katie Salen Tekinbas, Eric Zimmerman - Rules of Play\_ Game Design Fundamentals (The MIT Press)-The MIT Press (2003).

### References

1. Jesse Schell - The Art of Game Design: A Book of Lenses, Third Edition - CRC Press.
2. K.Patinson - Game Development : Gaming Design & Programming - Code Academy.
3. Ernest Adams- Fundamentals of Game Design, Third Edition - New Riders Publishing;
4. Joey de Vries Page - Learn OpenGL: Learn modern OpenGL graphics programming in a step-by-step fashion -Kendall & Wells

### Sample Course Level Assessment Questions.

#### Course Outcome 1 (CO1):

1. RULES, PLAY, and CULTURE is a structure that can facilitate critical design thinking in any design field. Justify the above statement.
2. Briefly explain the game design exercises.

#### Course Outcome 2 (CO2):

1. Explain four modes of interactivity.
2. What are the elements of the system?

#### Course Outcome 3 (CO3):

1. With the help of traits, explain the special qualities of digital games.
2. Distinguish between physical game and digital games.

#### Course Outcome 4(CO4):

1. How to create an OpenGL context with FreeGLUT?
2. Examine Multi User Dungeons.

#### Course Outcome 5 (CO5):

1. How can an OpenGL be used to create a rectangle?

2. Explain the following

1. Window Creation.
2. Function Call-Backs.

## COMPUTER SCIENCE AND DESIGN

| CST<br>393 | CRYPTOGRAPHIC<br>ALGORITHMS | Category | L | T | P | Credit | Year of<br>Introduction |
|------------|-----------------------------|----------|---|---|---|--------|-------------------------|
|            |                             | VAC      | 3 | 1 | 0 | 4      | 2019                    |

**Preamble:**

The course on Cryptographic Algorithms aims at exploring various algorithms deployed in offering confidentiality, integrity, authentication and non-repudiation services. This course covers classical encryption techniques, symmetric and public key crypto-system, key exchange and management, and authentication functions. The concepts covered in this course enable the learners in effective use of cryptographic algorithms for real life applications.

**Prerequisite:** A sound background in Number Theory.

**Course Outcomes:** After the completion of the course the student will be able to

|     |  |
|-----|--|
| CO1 | Identify the security services provided for different types of security attacks.<br>(Cognitive Knowledge Level : Understand) |
| CO2 | Summarize the classical encryption techniques for information hiding. (Cognitive Knowledge Level: Apply)                     |
| CO3 | Illustrate symmetric / asymmetric key cryptographic algorithms for secure communication.(Cognitive Knowledge Level: Apply)   |
| CO4 | Interpret key management techniques for secure communication.(Cognitive Knowledge Level: Understand)                         |
| CO5 | Summarize message authentication functions in a secure communication scenario.(Cognitive Knowledge Level: Understand)        |

### Mark Distribution

| <b>Total Marks</b> | <b>CIE Marks</b> | <b>ESE Marks</b> | <b>ESE Duration</b> |
|--------------------|------------------|------------------|---------------------|
| <b>150</b>         | <b>50</b>        | <b>100</b>       | <b>3 hours</b>      |

### Continuous Internal Evaluation Pattern:

Attendance : **10 marks**

Continuous Assessment Tests : **25 marks**

Continuous Assessment Assignment : **15 marks**

### Internal Examination Pattern:

Each of the two internal examinations has to be conducted out of 50 marks.

First Internal Examination shall be preferably conducted after completing the first half of the syllabus and the Second Internal Examination shall be preferably conducted after completing remaining part of the syllabus.

# COMPUTER SCIENCE AND DESIGN

There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly covered module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly covered module), each with 7 marks. Out of the 7 questions in Part B, a student should answer any 5.

## **End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 2 sub-divisions and carries 14 marks.

## **Syllabus**

### **Module-1 (Introduction to the Concepts of Security)**

Need for security, Security approaches, Principles of security, Types of attacks, OSI Security Architecture, Classical encryption techniques - Substitution techniques, Transposition techniques. Stream cipher, Block cipher, Public key cryptosystems vs. Symmetric key cryptosystems, Encrypting communication channels.

### **Module-2 (Symmetric Key Cryptosystems)**

Overview of symmetric key cryptography, Block cipher principles, Data Encryption Standard (DES), Differential and Linear cryptanalysis, Double DES, Triple DES, International Data Encryption Algorithm (IDEA), Advanced Encryption Algorithm (AES), Block cipher modes of operation, Stream cipher, RC4.

### **Module-3 (Public Key Cryptosystems)**

Principles of public key cryptosystems, RSA algorithm, RSA illustration, Attacks, ElGamal cryptographic system, Knapsack algorithm, Diffie-Hellman key exchange algorithm, Elliptical curve cryptosystems.

### **Module-4 (Key Management)**

Symmetric key distribution using symmetric encryption, Symmetric key distribution using asymmetric encryption, Distribution of public keys, Generating keys, transferring keys, Verifying keys, Updating keys, Storing keys, Backup keys, Compromised keys, Public key infrastructure.

# COMPUTER SCIENCE AND DESIGN

## Module – 5 (Authentication)

Authentication requirements, Authentication functions, Message authentication codes (MAC), Hash functions, Security of Hash functions and MAC, Message Digest 5 (MD5), Secure Hash Algorithm (SHA)-512, Hash-based Message Authentication Code (HMAC), Cipher-based Message Authentication Code (CMAC), X.509 Authentication services.

### Text Books

1. William Stallings, Cryptography and Network Security Principles and Practice, Pearson Edu, 6e.
2. Bruce Schneier, Applied Cryptography Protocols, Algorithms and source code in C, Wiley, 2e.

### References

1. Behrouz A. Forouzan, Cryptography and Network Security, McGraw Hill, 2e.
2. Johannes A. Buchmann, Introduction to Cryptography, Springer, 2e.
3. Douglas R. Stinson, Cryptography Theory and Practice, 3e, Chapman & Hall/CRC, 2006.
4. Bernard Menezes, Network Security and Cryptography, Cengage Learning, 2011.

### Sample Course Level Assessment Questions

#### Course Outcome 1 (CO1):

1. Consider an automated teller machine (ATM) in which users provide a personal identification number (PIN) and a card for account access. Give examples of confidentiality, integrity, and availability requirements associated with the system and, in each case, indicate the degree of importance of the requirement.
2. Discuss the different security services provided for preventing security attacks.

#### Course Outcome 2 (CO2):

1. The encryption key in a transposition cipher is (3,2,6,1,5,4). Find the decryption key
2. Discuss the process of encryption in Vernam cipher

#### Course Outcome 3 (CO3):

1. Devise a meet-in-the-middle attack for a triple DES.

## COMPUTER SCIENCE AND DESIGN

2. Write an algorithm for the InvSubBytes transformation and implement using python (**Assignment**)
3. Consider the following elliptic curve signature scheme. We have a global elliptic curve, prime  $p$ , and “generator”  $G$ . Alice picks a private signing key  $X_A$  and forms the public verifying  $Y_A = X_A G$ . To sign a message  $M$ :
  - Alice picks a value  $k$
  - Alice sends Bob  $M$ ,  $k$  and the signature  $S = M - kX_A G$ .
  - Bob verifies that  $M = S + kY_A$ .

Show that the verification process produces an equality if the signature is valid.

4. Write an algorithm to add two points on an elliptic curve over  $GF(p)$  and implement using Python. (**Assignment**)
5. Write an algorithm for encryption using knapsack cryptosystem and implement using Java. (**Assignment**)

### Course Outcome4 (CO4):

1. List four general categories of schemes for the distribution of public keys.
2. What are the essential ingredients of a public-key directory?

### Course Outcome 5 (CO5):

1. State the value of the length field in SHA-512 if the length of the message is 1919 bits and 1920 bits.
2. Write an algorithm in pseudo code for HMAC and implement using Python (**Assignment**)

# COMPUTER SCIENCE AND DESIGN

## Model Question Paper

**QP CODE:**

**Reg No:** \_\_\_\_\_

**Name :** \_\_\_\_\_

**PAGES : 3**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**FIFTH SEMESTER B. TECH DEGREE EXAMINATION(HONORS), MONTH & YEAR**

**Course Code: CST 393**

**Course Name: Cryptographic Algorithms**

**Max.Marks:100**

**Duration: 3 Hours**

### **PART A**

**Answer all Questions. Each question carries 3 Marks**

1. State the two approaches in attacking a cipher.
2. Define Substitution Cipher. Encrypt using one time pad  $M = \text{HONORS}$  and  $K = \text{CIPHER}$ .
3. Specify the purpose of S-Boxes in Data Encryption Standard (DES).
4. Differentiate between diffusion and confusion.
5. Perform encryption using RSA Algorithm for the following  $p=7$ ;  $q=11$ ;  $e=13$ ;  $M=5$ .
6. Is Diffie-Hellman key exchange protocol vulnerable? Justify.
7. List the techniques for distribution of public keys.
8. Define a certificate authority and its relation to public key cryptography.
9. Distinguish between integrity and message authentication.
10. What types of attacks are addressed by message authentication?

# COMPUTER SCIENCE AND DESIGN

(10x3=30)

## Part B

(Answer any one question from each module. Each question carries 14 Marks)

11. (a) With a neat sketch, Explain OSI Security architecture model. (8)
- (b) How does link encryption differ from end-to-end encryption? Explain. (6)

OR

12. (a) Encrypt the text “cryptography” using the Hill Cipher with the key  $\begin{pmatrix} 9 & 4 \\ 5 & 7 \end{pmatrix}$ . Show the calculations. (8)
- (b) Illustrate the steps involved in encrypting a plain text using playfair cipher with an example. (6)
13. (a) With a neat sketch, explain a single round in DES. 10
- (b) Explain encryption and decryption using 2 keys and 3 keys of triple DES. (4)

OR

14. (a) Explain the block cipher modes i) Cipher feedback mode ii) Output feedback mode. (8)
- (b) Describe the four types of transformations in AES. (6)
15. (a) Write an algorithm for generating public and private key using Elliptical curve cryptography. (10)

## COMPUTER SCIENCE AND DESIGN

- (b) The equation  $y^2 = x^3 + x + 1$ , the calculation is done modulo 13. Add two points  $R = P + Q$ , where  $P = (4, 2)$  and  $Q = (10, 6)$ . (4)

**OR**

16. User A and B use the Diffie-Hellman key exchange technique with a common prime  $q=71$  and primitive root  $\alpha=7$ .
- (a) If user A has private key  $X_A = 3$ , What is A's public key  $Y_A$ ? (7)
- (b) If user B has private key  $X_B = 6$ , What is A's public key  $Y_B$ ? (7)
17. (a) Define a session key and show how a KDC can create a session key between Alice and Bob. (7)
- (b) What are the requirements for the use of a public-key certificate scheme? (7)

**OR**

18. (a) What are the core components of a PKI? Briefly describe each component. (8)
- (b) Describe the following (i) Updating keys (ii) Compromised Keys. (6)
19. (a) Describe how SHA-512 logic produce message digest (10)
- (b) Distinguish between HMAC and CMAC (4)

**OR**

20. (a) Specify the format for X.509 certificate. Explain the steps required to obtain user's certificate. (7)
- (b) With suitable block diagrams, explain the types of functions that may be used to produce an authenticator. (8)

## COMPUTER SCIENCE AND DESIGN

### Teaching Plan

| No   | Contents  | No of Lecture Hrs |
|--|---|-------------------|
| <b>Module - 1 (Introduction to the Concepts of Security) (9 hrs)</b> |   |                   |
| 1.1  | Need for security, Security approaches  | 1 hour            |
| 1.2  | Principles of security, Types of attacks  | 1 hour            |
| 1.3  | OSI Security Architecture   | 1 hour            |
| 1.4  | Classical encryption techniques: Substitution techniques(Caesar cipher, Monoalphabetic cipher, Playfair cipher) | 1 hour            |
| 1.5  | Classical encryption techniques: Substitution techniques (Hill cipher, Polyalphabetic cipher, One-time pad)     | 1 hour            |
| 1.6  | Classical encryption techniques: Transposition techniques   | 1 hour            |
| 1.7  | Stream cipher, Block cipher   | 1 hour            |
| 1.8  | Public- key cryptosystems vs. Symmetric key cryptosystems   | 1 hour            |
| 1.9  | Encrypting communication channels   | 1 hour            |
| <b>Module - 2 (Symmetric key cryptosystems) (11 hrs)</b>             |   |                   |
| 2.1  | Overview of symmetric key cryptography  | 1 hour            |
| 2.2  | Block cipher principles   | 1 hour            |
| 2.3  | Data Encryption Standard (DES)  | 1 hour            |
| 2.4  | DES design criteria   | 1 hour            |
| 2.5  | Differential and Linear cryptanalysis   | 1 hour            |
| 2.6  | Double DES, Triple DES  | 1 hour            |

## COMPUTER SCIENCE AND DESIGN

|  |   |        |
|--|---|--------|
| 2.7  | IDEA  | 1 hour |
| 2.8  | Advanced Encryption Algorithm (AES structure)               | 1 hour |
| 2.9  | Advanced Encryption Algorithm (Transformations)             | 1 hour |
| 2.10   | Block cipher modes of operation                             | 1 hour |
| 2.11   | Stream cipher, RC4  | 1 hour |
| <b>Module - 3 (Public key cryptosystems) (8 hrs)</b>     |   |        |
| 3.1  | Principles of public key cryptosystems                      | 1 hour |
| 3.2  | RSA algorithm   | 1 hour |
| 3.3  | RSA illustration, Attacks                                   | 1 hour |
| 3.4  | ElGamal cryptographic system                                | 1 hour |
| 3.5  | Knapsack algorithm  | 1 hour |
| 3.6  | Diffie-Hellman key exchange algorithm                       | 1 hour |
| 3.7  | Elliptical curve cryptosystems(Elliptical curve arithmetic) | 1 hour |
| 3.8  | Elliptical curve cryptosystems (Elliptical curve algorithm) | 1 hour |
| <b>Module - 4 (Key Management) (8 hrs) [Text book-2]</b> |   |        |
| 4.1  | Symmetric key distribution using symmetric encryption       | 1 hour |
| 4.2  | Symmetric key distribution using asymmetric encryption      | 1 hour |
| 4.3  | Distribution of public keys                                 | 1 hour |
| 4.4  | Generating keys, Transferring keys                          | 1 hour |

## COMPUTER SCIENCE AND DESIGN

|  |                                    |        |
|--|------------------------------------|--------|
| 5  | Verifying keys, Updating keys      | 1 hour |
| 4.6  | Storing keys, Backup keys          | 1 hour |
| 4.7  | Compromised keys                   | 1 hour |
| 4.8  | Public key infrastructure          | 1 hour |
| <b>Module - 5 (Authentication) (9 hrs)</b> |                                    |        |
| 5.1  | Authentication requirements        | 1 hour |
| 5.2  | Authentication functions           | 1 hour |
| 5.3  | Message Authentication Codes (MAC) | 1 hour |
| 5.4  | Hash functions                     | 1 hour |
| 5.5  | Security of Hash functions and MAC | 1 hour |
| 5.6  | MD5                                | 1 hour |
| 5.7  | SHA-512                            | 1 hour |
| 5.8  | HMAC, CMAC                         | 1 hour |
| 5.9  | X.509 Authentication services      | 1 hour |

## COMPUTER SCIENCE AND DESIGN

|------------|--------------------------------------|----------|---|---|---|--------|-------------------------|
|            |                                      | VAC      | 3 | 1 | 0 |        | 4                       |

**Preamble:**

Neural networks is a biologically inspired programming paradigm which enables a computer to learn from observational data and deep learning is a powerful set of techniques for training neural networks. This course introduces the key concepts in neural networks, its architecture and learning paradigms, optimization techniques, basic concepts in deep learning, Convolutional Neural Networks and Recurrent Neural Networks. The students will be able to provide best solutions to real world problems in domains such as computer vision and natural language processing.

**Prerequisite:** A Sound knowledge in Computational fundamentals of machine learning

**Course Outcomes:** After the completion of the course the student will be able to

|     |  |
|-----|--|
| CO1 | Demonstrate the basic concepts of machine learning models and performance measures. <b>(Cognitive Knowledge Level : Understand)</b>      |
| CO2 | Illustrate the basic concepts of neural networks and its practical issues <b>(Cognitive Knowledge Level : Apply)</b>                     |
| CO3 | Outline the standard regularization and optimization techniques for deep neural networks <b>(Cognitive Knowledge Level : Understand)</b> |
| CO4 | Build CNN and RNN models for different use cases.<br><b>(Cognitive Knowledge Level : Apply)</b>  |
| CO5 | Explain the concepts of modern RNNs like LSTM, GRU <b>(Cognitive Knowledge Level : Understand)</b>                                       |

## COMPUTER SCIENCE AND DESIGN

### Assessment Pattern

| Bloom's Category | Continuous Assessment Tests |           | End Semester Examination Marks |
|------------------|-----------------------------|-----------|--------------------------------|
|                  | Test1 (%)                   | Test2 (%) |                                |
| Remember         | 30                          | 30        | 30                             |
| Understand       | 40                          | 40        | 40                             |
| Apply            | 30                          | 30        | 30                             |
| Analyse          |                             |           |                                |
| Evaluate         |                             |           |                                |
| Create           |                             |           |                                |

### Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 hours      |

### Continuous Internal Evaluation Pattern

|                                  |          |
|----------------------------------|----------|
| Attendance                       | 10 marks |
| Continuous Assessment Tests      | 25 marks |
| Continuous Assessment Assignment | 15 marks |

### Internal Examination Pattern:

Each of the two internal examinations has to be conducted out of 50 marks. First Internal Examination shall be preferably conducted after completing the first half of the syllabus and the Second Internal Examination shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly covered module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly covered module), each with 7 marks. Out of the 7 questions in Part B, a student should answer any 5.

### End Semester Examination Pattern:

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B

# COMPUTER SCIENCE AND DESIGN

contains 2 questions from each module of which a student should answer any one. Each question can have a maximum 2 subdivisions and carry 14 marks.

## Syllabus

### Module - 1 (Basics of Machine Learning )

Machine Learning basics - Learning algorithms - Supervised, Unsupervised, Reinforcement, Overfitting, Underfitting, Hyper parameters and Validation sets, Estimators -Bias and Variance. Challenges in machine learning. Simple Linear Regression, Logistic Regression, Performance measures - Confusion matrix, Accuracy, Precision, Recall, Sensitivity, Specificity, Receiver Operating Characteristic curve( ROC), Area Under Curve(AUC).

### Module -2 (Neural Networks )

Introduction to neural networks -Single layer perceptrons, Multi Layer Perceptrons (MLPs), Representation Power of MLPs, Activation functions - Sigmoid, Tanh, ReLU, Softmax. Risk minimization, Loss function, Training MLPs with backpropagation, Practical issues in neural network training - The Problem of Overfitting, Vanishing and exploding gradient problems, Difficulties in convergence, Local and spurious Optima, Computational Challenges. Applications of neural networks.

### Module 3 (Deep learning)

Introduction to deep learning, Deep feed forward network, Training deep models, Optimization techniques - Gradient Descent (GD), GD with momentum, Nesterov accelerated GD, Stochastic GD, AdaGrad, RMSProp, Adam. Regularization Techniques - L1 and L2 regularization, Early stopping, Dataset augmentation, Parameter sharing and tying, Injecting noise at input, Ensemble methods, Dropout, Parameter initialization.

### Module -4 (Convolutional Neural Network)

Convolutional Neural Networks – Convolution operation, Motivation, Pooling, Convolution and Pooling as an infinitely strong prior, Variants of convolution functions, Structured outputs, Data types, Efficient convolution algorithms. Practical use cases for CNNs, Case study - Building CNN model AlexNet with handwritten digit dataset MNIST.

### Module- 5 (Recurrent Neural Network)

Recurrent neural networks – Computational graphs, RNN design, encoder – decoder sequence to sequence architectures, deep recurrent networks, recursive neural networks, modern RNNs LSTM and GRU, Practical use cases for RNNs. Case study - Natural Language Processing.

3. Michael Nielsen, Neural Networks and Deep Learning, 2018

## Course Level Assessment Questions

### Course Outcome 1 (CO1):

1. Predict the price of a 1000 square feet house using the regression model generated from the following data.

| No. | Square feet | Price(Lakhs) |
|-----|-------------|--------------|
| 1   | 500         | 5            |
| 2   | 900         | 10           |
| 3   | 1200        | 13           |
| 4   | 1500        | 18           |
| 5   | 2000        | 25           |
| 6   | 2500        | 32           |
| 7   | 2700        | 35           |

2. Consider a two-class classification problem of predicting whether a photograph contains a man or a woman. Suppose we have a test dataset of 10 records with expected outcomes and a set of predictions from our classification algorithm. Compute the confusion matrix, accuracy, precision, recall, sensitivity and specificity on the following data.

| Sl.No. | Actual | Predicted |
|--------|--------|-----------|
| 1      | man    | woman     |
| 2      | man    | man       |
| 3      | woman  | woman     |
| 4      | man    | man       |

## COMPUTER SCIENCE AND DESIGN

|    |       |       |
|----|-------|-------|
| 5  | man   | woman |
| 6  | woman | woman |
| 7  | woman | man   |
| 8  | man   | man   |
| 9  | man   | woman |
| 10 | woman | woman |

### Course Outcome 2 (CO2):

1. Suppose you have a 3-dimensional input  $x = (x_1, x_2, x_3) = (2, 2, 1)$  fully connected with weights  $(0.5, 0.3, 0.2)$  to one neuron which is in the hidden layer with sigmoid activation function. Calculate the output of the hidden layer neuron.
2. Consider the case of the XOR function in which the two points  $\{(0, 0), (1, 1)\}$  belong to one class, and the other two points  $\{(1, 0), (0, 1)\}$  belong to the other class. Design a multilayer perceptron for this binary classification problem.

### Course Outcome 3 (CO3):

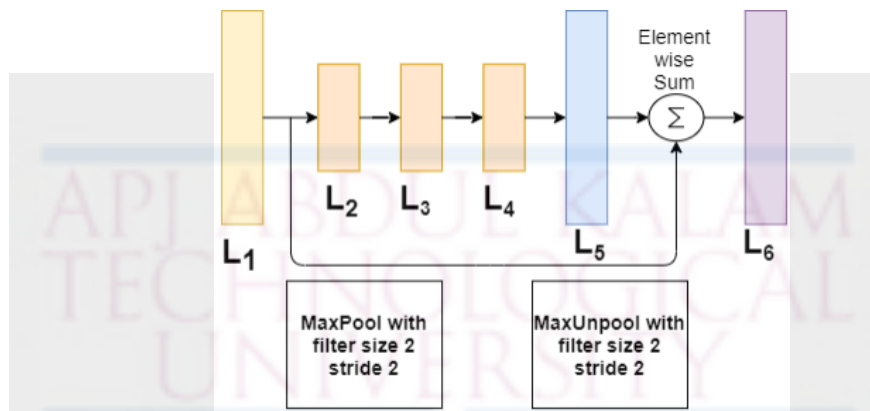

1. Derive a mathematical expression to show L2 regularization as weight decay.
2. Explain how L2 regularization improves the performance of deep feed forward neural networks.
3. Explain how L1 regularization method leads to weight sparsity.

### Course Outcome 4 (CO4):

1. Draw and explain the architecture of convolutional neural networks.
2. You are given a classification problem to classify the handwritten digits. Suggest a learning and/or inference machine with its architecture, an objective function, and an optimization routine, along with how input and output will be prepared for the classifier.
3. In a Deep CNN architecture the feature map  $L_1$  was processed by the following operations as shown in the figure. First down sampled using max pool operation of size 2 and stride 2, and three convolution operations and finally max unpool operation and followed by an element wise sum. The feature map  $L_1$  and  $L_4$  are given below. Compute the matrix  $L_6$ .

$$L_1 = \begin{matrix} 10 & 20 & 15 & 22 \\ 20 & 16 & 28 & 30 \\ 30 & 12 & 20 & 16 \\ 20 & 20 & 40 & 12 \end{matrix} \qquad L_4 = \begin{matrix} 10 & 20 \\ 20 & 30 \end{matrix}$$

# COMPUTER SCIENCE AND DESIGN

4. Illustrate the workings of the RNN with an example of a single sequence defined on a vocabulary of four words.

### Course Outcome 5 (CO5):

1. Draw and explain the architecture of LSTM.
2. List the differences between LSTM and GRU

## Model Question Paper

QP CODE:

PAGES:4

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY  
FIFTH SEMESTER B.TECH DEGREE EXAMINATION(HONORS), MONTH &  
YEAR

Course Code: CST 395

Course Name: Neural Networks and Deep Learning

Max.Marks:100

Duration:3 Hours

PART A

Answer all Questions. Each question carries 3 Marks

1. List and compare the types of machine learning algorithms
2. Suppose 10000 patients get tested for flu; out of them, 9000 are actually healthy and 1000 are actually sick. For the sick people, a test was positive for 620 and negative for 380. For healthy people, the same test was positive for 180 and negative for 8820. Construct a confusion matrix for the data and compute the

## COMPUTER SCIENCE AND DESIGN

accuracy, precision and recall for the data

3. Illustrate the limitation of a single layer perceptron with an example
4. Specify the advantages of ReLU over sigmoid activation function.
5. Derive weight updating rule in gradient descent when the error function is a) mean squared error b) cross entropy
6. List any three methods to prevent overfitting in neural networks
7. What happens if the stride of the convolutional layer increases? What can be the maximum stride? Justify your answer.
8. Consider an activation volume of size  $13 \times 13 \times 64$  and a filter of size  $3 \times 3 \times 64$ . Discuss whether it is possible to perform convolutions with strides 2, 3 and 5. Justify your answer in each case.
9. How does a recursive neural network work?
10. List down three differences between LSTM and RNN

(10x3=30  
)

### Part B

(Answer any one question from each module. Each question carries 14 Marks)

11. (a) Prove that the decision boundary of binary logistic regression is linear
- (b) Given the following data, construct the ROC curve of the data. Compute the AUC.

(9)

| Threshold | TP | TN | FP | FN |
|-----------|----|----|----|----|
| 1         | 0  | 25 | 0  | 29 |
| 2         | 7  | 25 | 0  | 22 |
| 3         | 18 | 24 | 1  | 11 |
| 4         | 26 | 20 | 5  | 3  |
| 5         | 29 | 11 | 14 | 0  |

(5)

## COMPUTER SCIENCE AND DESIGN

|   |    |   |    |   |
|---|----|---|----|---|
| 6 | 29 | 0 | 25 | 0 |
| 7 | 29 | 0 | 25 | 0 |

**OR**

12. (a) With an example classification problem, explain the following terms:  
 a) Hyper parameters b) Training set c) Validation sets d) Bias e) Variance (8)
- (b) Determine the regression equation by finding the regression slope coefficient and the intercept value using the following data. (6)

|   |    |    |    |    |    |
|---|----|----|----|----|----|
| x | 55 | 60 | 65 | 70 | 80 |
| y | 52 | 54 | 56 | 58 | 62 |

13. (a) Update the parameters  $V_{11}$  in the given MLP using back propagation with learning rate as 0.5 and activation function as sigmoid. Initial weights are given as  $V_{11}=0.2$ ,  $V_{12}=0.1$ ,  $V_{21}=0.1$ ,  $V_{22}=0.3$ ,  $V_{11}=0.2$ ,  $W_{11}=0.5$ ,  $W_{21}=0.2$

- (b) Explain the importance of choosing the right step size in neural networks (4)

**OR**

14. (a) Explain in detail any four practical issues in neural network training (8)

## COMPUTER SCIENCE AND DESIGN

- (b) Calculate the output of the following neuron Y with the activation function as a) binary sigmoid b) tanh c)ReLU

(6)

15. (a) Explain, what might happen in ADAGRAD, where momentum is expressed as  $\Delta \theta_{ij} = -\eta \frac{\partial L}{\partial \theta_{ij}} / \sqrt{\sum_{t=0}^{i-1} (\frac{\partial L}{\partial \theta_{ij}})^2}$  where the denominator computes the L2 norm of all previous gradients on a per-dimension basis and  $\eta$  is a global learning rate shared by all dimensions.

(6)

- (b) Differentiate gradient descent with and without momentum. Give equations for weight updation in GD with and without momentum. Illustrate plateaus, saddle points and slowly varying gradients.

(8)

**OR**

16. (a) Suppose a supervised learning problem is given to model a deep feed forward neural network. Suggest solutions for the following a) small sized dataset for training b) dataset with both labelled and unlabeled data c) large data set but data from different distribution

(9)

- (b) Describe the effect in bias and variance when a neural network is modified with more number of hidden units followed with dropout regularization.

(5)

17. (a) Draw and explain the architecture of Convolutional Neural Networks

(8)

- (b) Suppose that a CNN was trained to classify images into different categories. It performed well on a validation set that was taken from the same source as the training set but not on a testing set. What could be the problem with the training of such a CNN? How will you ascertain the problem? How can those problems be solved?

(6)

**OR**

18. (a) Explain the following convolution functions a) tensors b) kernel flipping c) down sampling d) strides e) zero padding.

(10)

## COMPUTER SCIENCE AND DESIGN

- (b) What is the motivation behind convolution neural networks? (4)
19. (a) Describe how an LSTM takes care of the vanishing gradient problem. Use some hypothetical numbers for input and output signals to explain the concept (8)
- (b) Explain the architecture of Recurrent Neural Networks (6)
- OR**
20. (a) Explain LSTM based solution for anyone of the problems in the Natural Language Processing domain. (8)
- (b) Discuss the architecture of GRU (6)

### Teaching Plan

| <b>Module 1 : [Text book 1: Chapter 5, Textbook 2: Chapter 2](9 hours)</b> |   |        |
|--|---|--------|
| 1.1  | Introduction, Learning algorithms - Supervised, Unsupervised, Reinforcement                               | 1 hour |
| 1.2  | Overfitting, Underfitting, Hyperparameters  | 1 hour |
| 1.3  | Validation sets, Estimators -Bias and Variance. Challenges in machine learning.                           | 1 hour |
| 1.4  | Simple Linear Regression  | 1 hour |
| 1.5  | Illustration of Linear Regression   | 1 hour |
| 1.6  | Logistic Regression   | 1 hour |
| 1.7  | Illustration of Logistic Regression   | 1 hour |
| 1.8  | Performance measures - Confusion matrix, Accuracy, Precision, Recall, Sensitivity, Specificity, ROC, AUC. | 1 hour |
| 1.9  | Illustrative Examples for performance measures  | 1 hour |
| <b>Module 2 : Text book 2, Chapter 1 (8 hours)</b>                         |   |        |
| 2.1  | Introduction to neural networks -Single layer perceptrons   | 1 hour |
| 2.2  | Multi Layer Perceptrons (MLPs), Representation Power of MLPs  | 1 hour |
| 2.3  | Activation functions - Sigmoid, Tanh, ReLU, Softmax. Risk minimization, Loss function                     | 1 hour |

## COMPUTER SCIENCE AND DESIGN

|   |   |        |
|---|---|--------|
| 2.4   | Training MLPs with backpropagation  | 1 hour |
| 2.5   | Illustration of back propagation algorithm  | 1 hour |
| 2.6   | Practical issues in neural network training - The Problem of Overfitting, Vanishing and exploding gradient problems | 1 hour |
| 2.7   | Difficulties in convergence, Local and spurious Optima, Computational Challenges.                                   | 1 hour |
| 2.8   | Applications of neural networks   | 1 hour |
| <b>Module 3 : Text book 1: Chapter 7, 8, Text book 2, Chapter 3, 4 (10 hours)</b> |   |        |
| 3.1   | Introduction to deep learning, Deep feed forward network  | 1 hour |
| 3.2   | Training deep models - Introduction, setup and initialization issues  | 1 hour |
| 3.3   | Solving vanishing and exploding gradient problems   | 1 hour |
| 3.4   | Concepts of optimization, Gradient Descent (GD), GD with momentum.  | 1 hour |
| 3.5   | Nesterov accelerated GD, Stochastic GD.   | 1 hour |
| 3.6   | AdaGrad, RMSProp, Adam.   | 1 hour |
| 3.7   | Concepts of Regularization, L1 and L2 regularization.   | 1 hour |
| 3.8   | Early stopping, Dataset augmentation  | 1 hour |
| 3.9   | Parameter sharing and tying, Injecting noise at input, Ensemble methods   | 1 hour |
| 3.10  | Dropout, Parameter initialization.  | 1 hour |
| <b>Module 4 : Text book 1, Chapter 9, Text book 2: Chapter 8 (8 hours)</b>        |   |        |
| 4.1   | Convolutional Neural Networks, architecture   | 1 hour |
| 4.2   | Convolution and Pooling operation with example  | 1 hour |
| 4.3   | Convolution and Pooling as an infinitely strong prior   | 1 hour |
| 4.4   | Variants of convolution functions, structured outputs, data types   | 1 hour |
| 4.5   | Efficient convolution algorithms.   | 1 hour |
| 4.6   | Practical use cases for CNNs  | 1 hour |
| 4.7   | Case study - Building CNN with MNIST and AlexNet.   | 1 hour |
| 4.8   | Case study - Building CNN with MNIST and AlexNet  | 1 hour |
| <b>Module 5 : Text book 1 :Chapter 10, 11, Text book 2:Chapter 7 (10 hours)</b>   |   |        |

## COMPUTER SCIENCE AND DESIGN

|      |  |        |
|------|--|--------|
| 5.1  | Recurrent neural networks – Computational graphs, RNN design | 1 hour |
| 5.2  | Encoder – decoder sequence to sequence architectures         | 1 hour |
| 5.3  | Deep recurrent networks- Architecture                        | 1 hour |
| 5.4  | Recursive neural networks                                    | 1 hour |
| 5.5  | Modern RNNs - LSTM   | 1 hour |
| 5.6  | Modern RNNs - LSTM   | 1 hour |
| 5.7  | GRU  | 1 hour |
| 5.8  | Practical use cases for RNNs.                                | 1 hour |
| 5.9  | Case study - Natural Language Processing.                    | 1 hour |
| 5.10 | Case study - Natural Language Processing.                    | 1 hour |

**Preamble:**

This is the foundational course for awarding B. Tech. Honours in Computer Science and Design with specialization in *Internet of Things*. The purpose of this course is to introduce Devices And Sensors For IOT-Programming for IOT Boards among learners. Concepts in this course help the learners to understand the devices and sensors required for IOT- Programming for IOT Boards.

**Prerequisite:** NIL.

**Course Outcomes:** After the completion of the course the student will be able to

|             |   |
|-------------|---|
| <b>CO 1</b> | Explain the technology behind IOT, its programming and prototyping (Knowledge Level: <b>Understand</b> )                                      |
| <b>CO 2</b> | Summarize design principles, process of manufacturing and role of ethics in IOT design and prototyping. (Knowledge Level: <b>Understand</b> ) |
| <b>CO 3</b> | Design prototypes for embedded devices, physical and online components. (Knowledge Level: <b>Apply</b> )                                      |
| <b>CO 4</b> | Describe a business model based on a prototype. (Knowledge Level: <b>Understand</b> )   |
| <b>CO 5</b> | Build real time applications using IOT devices sensors (Knowledge Level: <b>Apply</b> )   |
| <b>CO6</b>  | Describe the basics of programming ESP8266 with MicroPython. (Knowledge Level: <b>Understand</b> )  |

| PO#   | Broad PO                                   | PO#  | Broad PO                       |
| PO1   | Engineering Knowledge                      | PO7  | Environment and Sustainability |
| PO2   | Problem Analysis                           | PO8  | Ethics                         |
| PO3   | Design/Development of solutions            | PO9  | Individual and team work       |
| PO4   | Conduct investigations of complex problems | PO10 | Communication                  |
| PO5   | Modern tool usage                          | PO11 | Project Management and Finance |
| PO6   | The Engineer and Society                   | PO12 | Lifelong learning              |

**Assessment Pattern**

| Bloom's Category | Continuous Assessment Tests |        | End Semester Examination Marks |
|------------------|-----------------------------|--------|--------------------------------|
|                  | Test 1                      | Test 2 |                                |
| Remember         | 20%                         | 20%    | 20%                            |
| Understand       | 40%                         | 40%    | 40%                            |
| Apply            | 40%                         | 40%    | 40%                            |
| Analyses         |                             |        |                                |
| Evaluate         |                             |        |                                |
| Create           |                             |        |                                |

**Mark Distribution**

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 hours      |

**Continuous Internal Evaluation Pattern:**

Attendance : 10 marks

Continuous Assessment Tests : 25 marks

Continuous Assessment Assignment: 15 marks

## **Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. First Internal Examination shall be preferably conducted after completing the first half of the syllabus and the Second Internal Examination shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly covered module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly covered module), each with 7 marks. Out of the 7 questions in Part B, a student should answer any 5.

## **End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer anyone. Each question can have a maximum of 2 subdivisions and carries 14 marks.

# COMPUTER SCIENCE AND DESIGN

## Syllabus

### Module 1

9 hours

**The Internet of Things: An Overview:** The Technology of the Internet of Things, Enchanted Objects, Making the Internet of Things.

**Design Principles for Connected Devices:** Calm and Ambient Technology, Magic as Metaphor, Privacy, Web Thinking for Connected Devices, Affordances.

### Module 2

10 hours

**Thinking About Prototyping:** Sketching, Familiarity, Prototypes and Production, Open Source versus, Closed Source

**Prototyping Embedded Devices:** Electronics, Embedded Computing Basics, Arduino, Raspberry Pi, Beagle Bone Black, Electric Imp, Other Notable Platforms.

### Module 3

8 hours

**Prototyping the Physical Design:** Preparation, Sketch, Iterate, and Explore, Nondigital Methods, Laser Cutting, 3D Printing, CNC Milling, Repurposing/Recycling.

**Prototyping Online Components:** Getting Started with an API, Writing a New API, Real-Time Reactions, Other Protocols.

### Module 4

10 hours

**Business Models:** A Short History of Business Models, The Business Model Canvas, Who Is the Business Model For? Models, Funding an Internet of Things Startup.

**Moving to Manufacture:** What Are You Producing? Designing Kits, Designing Printed circuit boards. Manufacturing Printed Circuit Boards, Mass-Producing the Case and Other Fixtures, Certification, Costs, Scaling Up Software.

**Ethics:** Characterizing the Internet of Things, Privacy, Control, Environment, Solutions

### Module 5

8 hours

Introduction to ESP8266. Developer setup for micro python. Pyboard setup. Developer setup. GPIOs in micro python. Input sensing using buttons. UART and SPI. TCP/IP networking. Connecting wifi using micro python.

### **Text book:**

1. Designing the internet of things- McEwen, Adrian, and Hakim Cassimally. John Wiley & Sons, 2013.
2. Programming with MicroPython - Nicholas H. Tollervey, 2017

### **Reference books:**

1. Enabling things to talk, Bassi, Alessandro, et al published by Springer-Verlag Berlin An, 2016.
2. The internet of things: Key applications and protocols, Hersent, Olivier, David Boswarthick, and Omar Elloumi, published by John Wiley & Sons, 2011.
3. Internet of Things: Principles and paradigms, Buyya, Rajkumar, and Amir Vahid Dastjerdi, published by Elsevier, 2016.
4. From Machine-to-Machine to the Internet of Things: Introduction to a New Age of Intelligence, 1<sup>st</sup> Edition, Jan Holler, VlasiosTsiatsis, Catherine Mulligan, Stefan Avesand, StamatisKarnouskos, David Boyle, published by Academic Press,2014.
5. Learning Internet of Things, Peter Waher, published by PACKT publishing, BIRMINGHAM –MUMBAI
6. Architecting the Internet of Things, ISBN 978-3-642-19156-5 e-ISBN 978-3-642-19157-2, Bernd Scholz-Reiter, Florian Michahelles, published by Springer.
7. Building the Internet of Things with Ipv6 and MIPv6: The Evolving World of M2M Communications, ISBN: 978-1-118-41312-4, Daniel Minoli published by Wiley

Publications

8. Internet of Things (A Hands-on Approach), 1<sup>st</sup> Edition, Vijay Madiseti and Arshdeep Bahga published by VPT, 2014.

**Sample Course Level Assessment Questions.**

**Course Outcome 1 (CO1):**

1. Briefly describe the impact of IoT.
2. Explain about enchanting object.

**Course Outcome 2 (CO2):**

1. Briefly explain prototyping of embedded devices.
2. Compare open source and closed source.

**Course Outcome 3 (CO3):**

1. Design a 3D printing prototype.
2. Write a new API for prototyping an online component.

**Course Outcome 4 (CO4):**

1. Briefly explain the design procedure for designing printed circuit boards.
2. Explain Business model canvas.

**Course Outcome 5 (CO5)**

1. Design a real-time application using Printed circuit boards.
2. Design a real-time application using Designing Kits.

**Course Outcome 6 (CO6)**

1. Explain the Pyboard developer setup for micro python.
2. Explain UART and SPI.

**Model Question paper**

|   |                 |   |                      |

| <b>Course Name: Devices and Sensors For IOT-Programming for IOT Boards</b> |   |                          |
| <b>Max. Marks: 100</b>   |   | <b>Duration: 3 Hours</b> |
| <b>PART A</b>  |   |                          |
|  | <i>Answer all questions, each carries 3 marks.</i>                            | Marks                    |
| 1  | What are the flavors of the Internet of Things?                               | (3)                      |
| 2  | Describe “KEEPING SECRETS” with the example of “An Instrumented Car Park”.    | (3)                      |
| 3  | What are the things need to consider while developing Arduino project?        | (3)                      |
| 4  | Explain repurposing.  | (3)                      |
| 5  | What are the ways of reaching the customer segments in Business Model Canvas? | (3)                      |
| 6  | Write a short note on designing kits.   | (3)                      |
| 7  | Explain the process of testing for a printed circuit board.                   | (3)                      |
| 8  | Why is privacy important for Internet of Things?                              | (3)                      |
| 9  | Explain the developer setup of pyboard  | (3)                      |
| 10   | Draw the SPI configuration with three independent slaves.                     | (3)                      |

|   |    |   |     |
|---|----|---|-----|
| <b>PART B</b>   |    |   |     |
| <i>Answer any one Question from each module. Each question carries 14 Marks</i> |    |   |     |
| 11  | a) | Write an equation of the “Internet” of “Things” and explain the purpose of IOT.                         | (6) |
|   | b) | What are enchanted objects? Explain with examples how technology has always been associated with magic. | (8) |
| <b>OR</b>   |    |   |     |

## COMPUTER SCIENCE AND DESIGN

|    |    |  |     |
|----|----|--|-----|
| 12 | a) | Explain the terms “Magic as Metaphor” and “Manufactured Normalcy Field” along with a few examples. | (7) |
|    | b) | What is graceful degradation? Also explain affordance with respect to technology.                  | (7) |
| 13 | a) | Differentiate between open source and closed source.   | (7) |
|    | b) | Why should you mix open and closed source for the Internet of Things?                              | (7) |
|    |    | <b>OR</b>  |     |
| 14 | a) | Compare between Python and C++ as development language for Internet of Things.                     | (6) |
|    | b) | Differentiate between Arduino Due and Raspberry Pi Model B.  | (8) |
| 15 | a) | What is 3D printing? State its type.   | (8) |
|    | b) | Explain Laser cutting & the criteria for selecting the Laser cutter.                               | (6) |
|    |    | <b>OR</b>  |     |
| 16 | a) | Explain Constrained Application Protocol (CoAP).   | (8) |
|    | b) | Explain Scraping with examples.  | (6) |
| 17 | a) | Differentiate Crowd funding and Crowd sourcing.  | (6) |
|    | b) | Explain Business model Canvases.   | (8) |
|    |    | <b>OR</b>  |     |
| 18 | a) | Explain UART. How is data detected in a UART?  | (6) |
|    | b) | What are the software choices when designing printed circuit boards?                               | (8) |
| 19 | a) | Explain how Input sensing is done using buttons with help of necessary codes.                      | (8) |
|    | b) | Explain the hardware and developer setup for ESP8266.  | (6) |
|    |    | <b>OR</b>  |     |
| 20 | a) | Explain GPIO in detail.  | (6) |
|    | b) | Explain how ESP8266 is used for connecting to Wifi with the help                                   | (8) |

## COMPUTER SCIENCE AND DESIGN

|     |  |                           |  |

| CST<br>302 | COMPILER<br>DESIGN | Category | L | T | P | Credit | Year of Introduction |
|            |                    | PCC      | 3 | 1 | 0 | 4      | 2019                 |

**Preamble:**

The purpose of this course is to create awareness among students about the phases of a compiler and the techniques for designing a compiler. This course covers the fundamental concepts of different phases of compilation such as lexical analysis, syntax analysis, semantic analysis, intermediate code generation, code optimization and code generation. Students can apply this knowledge in design and development of compilers.

**Prerequisite:** Sound knowledge in Data Structures, Formal Languages & Automata Theory.

**Course Outcomes:** After the completion of the course the student will be able to

|     |  |
|-----|--|
| CO1 | Explain the phases in compilation process (lexical analysis, syntax analysis, semantic analysis, intermediate code generation, code optimization and code generation) and model a lexical analyzer ( <b>Cognitive Knowledge Level: Apply</b> ) |
| CO2 | Model language syntax using Context Free Grammar and develop parse tree representation using leftmost and rightmost derivations ( <b>Cognitive Knowledge Level: Apply</b> )  |
| CO3 | Compare different types of parsers (Bottom-up and Top-down) and construct parser for a given grammar ( <b>Cognitive Knowledge Level: Apply</b> )   |
| CO4 | Build Syntax Directed Translation for a context free grammar, compare various storage allocation strategies and classify intermediate representations ( <b>Cognitive Knowledge Level: Apply</b> )  |
| CO5 | Illustrate code optimization and code generation techniques in compilation ( <b>Cognitive Knowledge Level: Apply</b> )   |

**Assessment Pattern**

| Bloom's Category | Continuous Assessment Tests |                | End Semester Examination Marks |
|------------------|-----------------------------|----------------|--------------------------------|
|                  | Test 1 (Marks)              | Test 2 (Marks) |                                |
| Remember         | 20                          | 20             | 20                             |
| Understand       | 40                          | 40             | 40                             |
| Apply            | 40                          | 40             | 40                             |
| Analyze          |                             |                |                                |

|          |  |  |  |
|----------|--|--|--|
| Evaluate |  |  |  |
| Create   |  |  |  |

**Mark Distribution**

| <b>Total Marks</b> | <b>CIE Marks</b> | <b>ESE Marks</b> | <b>ESE Duration</b> |
|--------------------|------------------|------------------|---------------------|
| <b>150</b>         | <b>50</b>        | <b>100</b>       | <b>3 hours</b>      |

**Continuous Internal Evaluation Pattern:**

Attendance : **10 marks**

Continuous Assessment - Test : **25 marks**

Continuous Assessment - Assignment : **15 marks**

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. First series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 full questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carries 14 marks.

## Syllabus

### **Module - 1 (Introduction to compilers and lexical analysis)**

Analysis of the source program - Analysis and synthesis phases, Phases of a compiler. Compiler writing tools. Bootstrapping. Lexical Analysis - Role of Lexical Analyser, Input Buffering, Specification of Tokens, Recognition of Tokens.

### **Module - 2 (Introduction to Syntax Analysis)**

Role of the Syntax Analyser – Syntax error handling. Review of Context Free Grammars - Derivation and Parse Trees, Eliminating Ambiguity. Basic parsing approaches - Eliminating left recursion, left factoring. Top-Down Parsing - Recursive Descent parsing, Predictive Parsing, LL(1) Grammars.

### **Module - 3 (Bottom-Up Parsing)**

Handle Pruning. Shift Reduce parsing. Operator precedence parsing (Concept only). LR parsing - Constructing SLR, LALR and canonical LR parsing tables.

### **Module - 4 (Syntax directed translation and Intermediate code generation)**

Syntax directed translation - Syntax directed definitions, S-attributed definitions, L-attributed definitions, Bottom-up evaluation of S-attributed definitions. Run-Time Environments - Source Language issues, Storage organization, Storage-allocation strategies. Intermediate Code Generation - Intermediate languages, Graphical representations, Three-Address code, Quadruples, Triples.

### **Module 5 – (Code Optimization and Generation)**

Code Optimization - Principal sources of optimization, Machine dependent and machine independent optimizations, Local and global optimizations. Code generation - Issues in the design of a code generator, Target Language, A simple code generator.

### **Text Books**

1. Aho A.V., Ravi Sethi and D. Ullman. Compilers – Principles Techniques and Tools, Addison Wesley, 2006.

### **Reference Books**

1. D.M.Dhamdhere, System Programming and Operating Systems, Tata McGraw Hill & Company, 1996.
2. Kenneth C. Loudon, Compiler Construction – Principles and Practice, Cengage Learning Indian Edition, 2006.

3. Tremblay and Sorenson, The Theory and Practice of Compiler Writing, Tata McGraw Hill & Company, 1984.

### Sample Course Level Assessment Questions

#### Course Outcome 1 (CO1):

- 1) Explain the phases of a compiler with a neat diagram.
- 2) Define a token. Identify the tokens in the expression  $a := b + 10$ .

#### Course Outcome 2 (CO2):

- 1) Illustrate the process of eliminating ambiguity, left recursion and left factoring the grammar.
- 2) Is the following grammar ambiguous? If so eliminate ambiguity.

$$E \rightarrow E + E \mid E * E \mid (E) \mid id$$

#### Course Outcome 3 (CO3):

1. What are the different parsing conflicts in the SLR parsing table?
2. Design a recursive descent parser for the grammar

$$E \rightarrow E + T \mid T$$

$$T \rightarrow T * F \mid F$$

$$F \rightarrow (E) \mid id$$

3. Construct canonical LR(0) collection of items for the grammar below.

$$S \rightarrow L = R$$

$$S \rightarrow R$$

$$L \rightarrow * R$$

$$L \rightarrow id$$

$$R \rightarrow L$$

Also identify a shift reduce conflict in the LR(0) collection constructed above.

#### Course Outcome 4 (CO4):

1. Write the quadruple and triple representation of the following intermediate code

$$R1 = C * D$$

$$R2 = B + R1$$

$$A = R2$$

$$B[0] = A$$

2. Differentiate S-attributed Syntax Directed Translation(SDT) and L-attributed SDT. Write S - attributed SDT for a simple desktop calculator

**Course Outcome 5 (CO5):**

1. List out the examples of function preserving transformations.
2. What are the actions performed by a simple code generator for a typical three-address statement of the form  $x = y \text{ op } z$ .

**Model Question Paper**

**QP CODE:**

**Reg No:** \_\_\_\_\_

**Name:** \_\_\_\_\_

**PAGES : 4**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY  
SIXTH SEMESTER B.TECH DEGREE EXAMINATION , MONTH & YEAR**

**Course Code: CST 302**

**Course Name: Compiler Design**

**Max.Marks:100  
Hours**

**Duration: 3**

**PART A**

**Answer All Questions. Each Question Carries 3 Marks**

1. Specify the analysis and synthesis parts of compilation.
2. Define the terms token, lexemes and patterns with examples.
3. Is the grammar  $S \rightarrow S \mid (S) S / \epsilon$  ambiguous? Justify your answer.
4. What is left recursive grammar? Give an example. What are the steps in removing left recursion?
5. Compare different bottom-up parsing techniques.
6. What are the possible actions of a shift reduce parser.

7. Differentiate synthesized and inherited attributes with examples.
8. Translate  $a[i] = b * c - b * d$ , to quadruple.
9. What is the role of peephole optimization in the compilation process
10. What are the issues in the design of a code generator

**(10x3=30)****Part B****Answer any one question from each module. Each question carries 14 Marks)**

11. (a) Explain the different phases of a compiler with a running example. **(9)**
- (b) List and explain any three compiler construction tools. **(5)**

**OR**

12. (a) What is a regular definition? Give the regular definition of an unsigned integer **(7)**
- (b) Express the role of transition diagrams in recognition of tokens. **(7)**
13. (a) What is Recursive Descent parsing? List the challenges in designing such a parser? **(4)**
- (b) Consider the following grammar **(10)**

 $E \rightarrow E \text{ or } T \mid T$  $T \rightarrow T \text{ and } F \mid F$  $F \rightarrow \text{not } F \mid (E) \mid \text{true} \mid \text{false}$ 

- (i) Remove left recursion from the grammar.
- (ii) Construct a predictive parsing table.
- (iii) Justify the statement "The grammar is LL (1)".

**OR**

14. (a) What is Recursive Descent parsing? List the problems in designing such a parser (4)

(b) Design a recursive descent parser for the grammar  $S \rightarrow cAd$ ,  $A \rightarrow ab/ b$  (5)

Find the FIRST and FOLLOW of the non-terminals S, A and B in the grammar (5)

$$\begin{aligned} S &\rightarrow aABe \\ A &\rightarrow Abc \mid b \\ B &\rightarrow d \end{aligned}$$

15. (a) Construct the LR(0) set of items and their GOTO function for the grammar  $S \rightarrow S S + \mid S S * \mid a$  (10)

(b) Is the grammar SLR? Justify your answer (4)

**OR**

16. (a) Identify LR(1) items for the grammar

$$\begin{aligned} S &\rightarrow CC \\ C &\rightarrow cC \mid d \end{aligned} \quad (7)$$

(b) Construct LALR table for the above grammar (7)

17. (a) Design a Syntax Directed Translator(SDT) for the arithmetic expression  $(4 * 7 + 19) * 2$  and draw an annotated parse tree for the same. (8)

(b) Consider the grammar with following translation rules and E as the start symbol (6)

$$\begin{aligned} E &\rightarrow E1 \# T \{ E.value = E1.value \times T.value ; \} \\ &\quad \mid T \{ E.value = T.value ; \} \\ T &\rightarrow T1 \& F \{ T.value = T1.value + F.value ; \} \\ &\quad \mid F \{ T.value = F.value ; \} \\ F &\rightarrow num \{ F.value = num.lvalue ; \} \end{aligned}$$

Compute E.value for the root of the parse tree for the expression  $2\#3 \& 5\# 6 \& 7$

**OR**

18. (a) Write Syntax Directed Translator (SDT) and parse tree for infix to postfix translation of an expression. (8)
- (b) Explain the storage allocation strategies. (6)
19. (a) Describe the principal sources of optimization (7)
- (b) Illustrate the optimization of basic blocks with examples. (7)

**OR**

20. (a) Write the Code Generation Algorithm and explain the *getreg* function (6)
- (b) Generate target code sequence for the following statement (8)
- $$d := (a-b) + (a-c) + (a-c).$$

**Teaching Plan**

| No  | Contents  | No. of Lecture Hours |
|---|---|----------------------|
| <b>Module - 1(Introduction to Compilers and lexical analyzer) (8 hours)</b> |   |                      |
| 1.1   | Introduction to compilers, Analysis of the source program | 1 hour               |
| 1.2   | Phases of the compiler – Analysis Phases                  | 1 hour               |
| 1.3   | Phases of the Compiler - Synthesis Phases                 | 1 hour               |
| 1.4   | Symbol Table Manager and Error Handler                    | 1 hour               |
| 1.5   | Compiler writing tools, bootstrapping                     | 1 hour               |
| 1.6   | The role of Lexical Analyzer , Input Buffering            | 1 hour               |
| 1.7   | Specification of Tokens                                   | 1 hour               |
| 1.8   | Recognition of Tokens                                     | 1 hour               |

| <b>Module – 2 (Introduction to Syntax Analysis) (10 hours)</b>                             |  |        |
|--|--|--------|
| 2.1  | Role of the Syntax Analyser, Syntax error handling     | 1 hour |
| 2.2  | Review of Context Free Grammars                        | 1 hour |

|            |  | PCC      | 3 | 1 | 0 | 4      | 2019                    |

**Preamble:**

The purpose of this course is to make awareness about strong theoretical relationships between computer graphics and image processing. This course helps the learner to understand three-dimensional environment representation in a computer, transformation of 2D/3D objects, basic mathematical techniques and algorithms used to build useful applications, imaging, and image processing techniques. The study of computer graphics and image processing develops the ability to create image processing frameworks for different domains and develops algorithms for emerging display technologies.

**Prerequisite:** A sound knowledge of Mathematics and a programming language.

**Course Outcomes:** After the completion of the course the student will be able to

| CO# | CO   |
|-----|--|
| CO1 | Describe the working principles of graphics devices( <b>Cognitive Knowledge level: Understand</b> )  |
| CO2 | Illustrate line drawing, circle drawing and polygon filling algorithms(Cognitive Knowledge level: Apply)   |
| CO3 | Demonstrate geometric representations, transformations on 2D & 3D objects, clipping algorithms and projection algorithms(Cognitive Knowledge level: Apply) |
| CO4 | Summarize visible surface detection methods(Cognitive Knowledge level: Understand)   |
| CO5 | Summarize the concepts of digital image representation, processing and demonstrate pixel relationships(Cognitive Knowledge level: Apply)                   |
| CO6 | Solve image enhancement and segmentation problems using spatial domain techniques(Cognitive Knowledge level: Apply)  |

| Evaluate |    |    |    |
| Create   |    |    |    |

### Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3            |

### Continuous Internal Evaluation Pattern:

|   |          |
|---|----------|
| Attendance  | 10 marks |
| Continuous Assessment Tests (Average of Series Tests 1 & 2) | 25 marks |
| Continuous Assessment Assignment                            | 15 marks |

### Internal Examination Pattern:

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

### End Semester Examination Pattern:

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 full questions from each module of which student should answer any one full question. Each question can have maximum 2 sub-divisions and carries 14 marks.

## Syllabus

### **Module – 1(Basics of Computer graphics and Algorithms)**

Basics of Computer Graphics and its applications. Video Display devices- Refresh Cathode Ray Tubes, Random Scan Displays and systems, Raster scan displays and systems. Line drawing algorithms- DDA, Bresenham's algorithm. Circle drawing algorithms- Midpoint Circle generation algorithm, Bresenham's algorithm.

### **Module - 2(Filled Area Primitives and transformations)**

Filled Area Primitives- Scan line polygon filling, Boundary filling and flood filling. Two dimensional transformations-Translation, Rotation, Scaling, Reflection and Shearing, Composite transformations, Matrix representations and homogeneous coordinates. Basic 3D transformations.

### **Module - 3 (Clipping and Projections)**

Window to viewport transformation. Cohen Sutherland Line clipping algorithm. Sutherland Hodgeman Polygon clipping algorithm. Three dimensional viewing pipeline. Projections- Parallel and Perspective projections. Visible surface detection algorithms- Depth buffer algorithm, Scan line algorithm.

### **Module - 4 (Fundamentals of Digital Image Processing)**

Introduction to Image processing and applications. Image as 2D data. Image representation in Gray scale, Binary and Colour images. Fundamental steps in image processing. Components of image processing system. Coordinate conventions. Sampling and quantization. Spatial and Gray Level Resolution. Basic relationship between pixels– neighbourhood, adjacency, connectivity. Fundamentals of spatial domain-convolution operation.

### **Module - 5 (Image Enhancement in Spatial Domain and Image Segmentation)**

Basic gray level transformation functions - Log transformations, Power-Law transformations, Contrast stretching. Histogram equalization. Basics of spatial filtering - Smoothing spatial filter- Linear and nonlinear filters, and Sharpening spatial filters-Gradient and Laplacian.

Fundamentals of Image Segmentation. Thresholding - Basics of Intensity thresholding and Global Thresholding. Region based Approach - Region Growing, Region Splitting and Merging. Edge Detection - Edge Operators- Sobel and Prewitt.

### Course Level Assessment Questions

#### Course Outcome 1 (CO1):

1. Compare the working principle of raster scan systems and random scan systems.
2. How much time is spent scanning across each row of pixels during screen refresh on a raster system with resolution of 1280\*1024 and a refresh rate of 60 frames per second?

#### Course Outcome 2 (CO2):

1. Rasterize the line with end points(2,3) and (5,8) using Bresenham's line drawing algorithm.
2. Explain how the 4-connected area filling approach differs from 8- connected area filling in boundary filling algorithm

#### Course Outcome 3 (CO3):

1. Rotate a triangle ABC 45 degree counter clockwise about the pivot point (10,3), where the position vector of the coordinate ABC is given as A(4,1), B(5,2) and C(4,3).
2. Given a clipping window A(20,20), B(60,20), C(60,40) and D(20,40). Using Cohen Sutherland algorithm, find the visible portion of the line segment joining the points P(40,80) and Q(120,30)

#### Course Outcome 4 (CO4):

1. Explain scan line algorithm for detecting visible surfaces in an object.

#### Course Outcome 5 (CO5):

1. Give an image representation model and describe how the representation changes in grayscale, binary and colour images.
2. Consider an image segment shown below.

3 1 2 1 (q)

2 2 0 2

1 2 1 1

(p) 1 0 1 2

- (a) Let  $V=\{0,1\}$  and compute the length of the shortest 4-,8- and m- path between p and q. If a particular path does not exist between these two points , explain why?
- (b) Repeat for  $V=\{1,2\}$ .

3. The spatial resolution of an image is given by 128 X 128. What are its storage requirements if it is represented by 64 gray levels?

**Course Outcome 6 (CO6):**

1. A skilled medical technician is charged with the job of inspecting a certain class of monochrome images generated by electronic microscope. To facilitate the inspection, the technician uses image processing aids. However when he examines the images he finds the following problems.
- Presence of bright isolated dots that are not of interest.
  - Lack of sharpness
  - Poor contrast

Identify the sequence of preprocessing steps that the technician may use to overcome the above mentioned problems and explain it.

2. A 4x4, 4 bits/pixel original image is given by

|    |    |    |    |
|----|----|----|----|
| 10 | 12 | 8  | 9  |
| 10 | 12 | 12 | 14 |
| 12 | 13 | 10 | 9  |
| 14 | 12 | 10 | 12 |

- Apply histogram equalisation to the image by rounding the resulting image pixels to integers
  - Sketch the histogram of the original image and the histogram-equalised image.
3. You have Sobel operator and Laplacian operator for edge detection. Which operator will you select for edge detection in the case of noisy image? Explain. **(Assignment)**

**Model Question Paper**

**QP CODE:**

**Reg No:** \_\_\_\_\_

**Name:** \_\_\_\_\_

**PAGES : 4**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**SIXTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: CST 304**

**Course Name: Computer Graphics and Image Processing**

**Max. Marks : 100**

**Duration: 3 Hours**

**PART A**

**Answer All Questions. Each Question Carries 3 Marks**

1. Justify the approach of using integer arithmetic in Bresenham's line drawing algorithm.
2. Consider a raster system with a resolution of 1024\*1024. What is the size of the raster needed to store 4 bits per pixel? How much storage is needed if 8 bits per pixel are to be stored?
3. Show that two successive reflections about either of the coordinate axes is equivalent to a single rotation about the coordinate origin.
4. Determine a sequence of basic transformations that are equivalent to the x-direction shearing matrix.
5. Find the window to viewport normalization transformation with window lower left corner at (1,1) and upper right corner at (2,6).
6. Find the orthographic projection of a unit cube onto the  $x=0$ ,  $y=0$  and  $z=0$  plane.
7. Define Sampling and Quantization of an image.

8. Give any three applications of digital image processing.
9. A captured image appears very dark because of wrong lens aperture setting. Describe an enhancement technique which is appropriate to enhance such an image.
10. Suggest an approach of thresholding that should be used in case of uniform illumination. (10x3=30)

**Part B**

**(Answer any one question from each module. Each question carries 14 Marks)**

11. (a) Write Midpoint circle drawing algorithm and use it to plot a circle with radius=20 and center is (50,30). (10)
- (b) Draw the architecture of raster scan display systems and explain its working principle. (4)

**OR**

12. (a) Derive the initial decision parameter of Bresenham's line drawing algorithm and use the algorithm to rasterize a line with endpoints (2,2) and (10,10). (10)
- (b) Explain the working principle of color CRT monitors with suitable illustrations. (4)
13. (a) Compare boundary fill algorithm and flood fill algorithm. (5)
- (b) Reflect a triangle ABC about the line  $3x-4y+8=0$ . The position vector of the coordinate ABC is given as A(4,1), B(5,2) and C(4,3). (9)

**OR**

14. (a) Explain the need of using vanishing points in projections. (4)
- (b) Explain Cohen-Sutherland line clipping algorithm. Use the algorithm to clip line P1(70, 20) and P2(100,10) against a window lower left hand corner (50,10) and upper right hand corner (80,40). (10)
15. (a) Describe Sutherland Hodegman polygon clipping algorithm and what are its (7)

limitations.

- (b) Explain how visible surfaces can be detected using depth buffer algorithm. (7)

**OR**

16. (a) Describe Sutherland Hodegman polygon clipping algorithm and what are its limitations. (7)

- (b) Explain how visible surfaces can be detected using depth buffer algorithm. (7)

17. (a) Explain the components of an image processing system with suitable diagram (9)

- (b) Define Resolution of an image. Explain the spatial and gray level resolution of an image with an example. (5)

**OR**

18. (a) Define 4-adjacency, 8 adjacency and m-adjacency. Consider the image segment shown. (7)

4 2 3 2 (q)  
 3 3 1 3  
 2 3 2 2  
 (p) 2 1 2 3

Let  $V=\{1,2\}$  and compute the length of the shortest 4-,8- and m- path between p and q. If a particular path does not exist between these two points, explain why?

- (b) Using any one application, explain the steps involved in image processing. (7)

19. (a) A 5x5 image patch is shown below. Compute the value of the marked pixel if it is smoothened by a 3x3 average filter and median filter. (4)

$$f(m,n) = \begin{pmatrix} 0 & 1 & 2 & 3 & 2 \\ 5 & 6 & 7 & 8 & 4 \\ 4 & 3 & 2 & 1 & 2 \\ 8 & 7 & 6 & 5 & 3 \\ 1 & 5 & 3 & 7 & 6 \end{pmatrix}$$

- (b) Define Image segmentation and describe in detail method of edge and region based segmentation technique. (10)

OR

20. (a) Distinguish between smoothing and sharpening filters in terms of (10)
- (i) Functionality
  - (ii) Types
  - (iii) Applications
  - (iv) Mask Coefficients
- (b) Describe how an image is segmented using split and merge technique in association with the region adjacency graph. (8)

## Teaching Plan

| No   | Contents   | No of Lecture Hrs (45 hrs) |
|--|--|----------------------------|
| <b>Module – 1 (Basics of Computer Graphics and Algorithms) (9 hrs)</b> |  |                            |
| 1.1  | Basics of Computer Graphics and applications               | 1 hour                     |
| 1.2  | Refresh Cathode Ray Tubes                                  | 1 hour                     |
| 1.3  | Random Scan Displays and systems                           | 1 hour                     |
| 1.4  | Raster scan displays and systems                           | 1 hour                     |
| 1.5  | DDA Line drawing Algorithm                                 | 1 hour                     |
| 1.6  | Bresenham's line drawing algorithm                         | 1 hour                     |
| 1.7  | Midpoint Circle generation algorithm                       | 1 hour                     |
| 1.8  | Bresenham's Circle generation algorithm                    | 1 hour                     |
| 1.9  | Illustration of line drawing and circle drawing algorithms | 1 hour                     |
| <b>Module - 2 (Filled Area Primitives and transformations) (9 hrs)</b> |  |                            |
| 2.1  | Scan line polygon filling                                  | 1 hour                     |
| 2.2  | Boundary filling and flood filling                         | 1 hour                     |
| 2.3  | Basic 2D transformations-Translation                       | 1 hour                     |

|  |   |        |
|--|---|--------|
| 2.4  | Basic 2D transformations- Rotation and Scaling  | 1 hour |
| 2.5  | Reflection and Shearing   | 1 hour |
| 2.6  | Composite transformations   | 1 hour |
| 2.7  | Matrix representations and homogeneous coordinates  | 1 hour |
| 2.8  | Basic 3D transformation-Translation and scaling   | 1 hour |
| 2.9  | Basic 3D transformation-Rotation  | 1 hour |
| <b>Module - 3 (Clipping and Projections) (8 hrs)</b>                 |   |        |
| 3.1  | Window to viewport transformation   | 1 hour |
| 3.2  | Cohen Sutherland Line clipping algorithm  | 1 hour |
| 3.3  | Sutherland Hodgeman Polygon clipping algorithm  | 1 hour |
| 3.4  | Practice problems on Clipping algorithms  | 1 hour |
| 3.5  | Three dimensional viewing pipeline, Projections-Parallel projections  | 1 hour |
| 3.6  | Projections- Perspective projections  | 1 hour |
| 3.7  | Visible surface detection algorithms- Depth buffer algorithm  | 1 hour |
| 3.8  | Scan line visible surface detection algorithm   | 1 hour |
| <b>Module - 4 (Fundamentals of Digital Image Processing) (8 hrs)</b> |   |        |
| 4.1  | Introduction to Image processing-Image as a 2D data, Image representation-Gray scale, Binary and Colour images. | 1 hour |
| 4.2  | Fundamental steps in image processing and applications  | 1 hour |
| 4.3  | Components of image processing system   | 1 hour |
| 4.4  | Coordinate conventions, Sampling and quantization, Spatial and Gray Level Resolution                            | 1 hour |
| 4.5  | Basic relationship between pixels – neighbourhood, adjacency, connectivity                                      | 1 hour |
| 4.6  | Illustration of basic relationship between pixels– neighbourhood,   | 1 hour |

|  |   |         |
|--|---|---------|
|  | adjacency, connectivity   |         |
| 4.7  | Fundamentals of spatial domain - Convolution operation  | 1 hour  |
| 4.8  | Illustration of Convolution operation   | 1 hour  |
| <b>Module - 5 (Image Enhancement in spatial domain and Image Segmentation) ( 11 hrs)</b> |   |         |
| 5.1  | Basic gray level transformation functions- Log transformations.                                 | 1 hour  |
| 5.2  | Power-Law transformations, Contrast stretching  | 1 hour  |
| 5.3  | Histogram equalization  | 1 hour  |
| 5.4  | Illustration of Histogram equalization  | 1 hour  |
| 5.5  | Basics of spatial filtering, Smoothing spatial filter- Linear and nonlinear filters             | 1 hour  |
| 5.6  | Sharpening spatial filtering-Gradient filter mask   | 1 hour  |
| 5.7  | Sharpening spatial filtering-Laplacian filter mask  | 1 hour  |
| 5.8  | Fundamentals of Image Segmentation, Basics of Intensity thresholding, Basic Global Thresholding | 1 hour  |

|------------|-------------------------------------|----------|---|---|---|--------|-------------------------|
|            |                                     | PCC      | 3 | 1 | 0 | 4      | 2019                    |

**Preamble:**

The course introduces students to the design of computer algorithms, as well as analysis of algorithms. Algorithm design and analysis provide the theoretical backbone of computer science and are a must in the daily work of the successful programmer. The goal of this course is to provide a solid background in the design and analysis of the major classes of algorithms. At the end of the course students will be able to develop their own versions for a given computational task and to compare and contrast their performance.

**Prerequisite:**

Strong Foundation in Mathematics, Programming in C, Data Structures and Graph Theory.

**Course Outcomes:** After the completion of the course the student will be able to

| CO# | CO  |
|-----|---|
| CO1 | Analyze any given algorithm and express its time and space complexities in asymptotic notations. <b>(Cognitive Level: Apply)</b>  |
| CO2 | Derive recurrence equations and solve it using Iteration, Recurrence Tree, Substitution and Master's Method to compute time complexity of algorithms. <b>(Cognitive Level: Apply)</b> |
| CO3 | Illustrate Graph traversal algorithms & applications and Advanced Data structures like AVL trees and Disjoint set operations. <b>(Cognitive Level: Apply)</b>                         |
| CO4 | Demonstrate Divide-and-conquer, Greedy Strategy, Dynamic programming, Branch-and Bound and Backtracking algorithm design techniques <b>(Cognitive Level: Apply)</b>                   |
| CO5 | Classify a problem as computationally tractable or intractable, and discuss strategies to address intractability <b>(Cognitive Level: Understand)</b>                                 |
| CO6 | Identify the suitable design strategy to solve a given problem. <b>(Cognitive Level: Analyze)</b>   |

|          |  |  |  |
|----------|--|--|--|
| Analyze  |  |  |  |
| Evaluate |  |  |  |
| Create   |  |  |  |

**Mark Distribution**

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3            |

**Continuous Internal Evaluation Pattern:**

|   |                 |
|---|-----------------|
| Attendance  | <b>10 marks</b> |
| Continuous Assessment Tests (Average of Series Tests 1 & 2) | <b>25 marks</b> |
| Continuous Assessment Assignment                            | <b>15 marks</b> |

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. First series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 full questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carries 14 marks.

## Syllabus

### Module-1 (Introduction to Algorithm Analysis)

Characteristics of Algorithms, Criteria for Analysing Algorithms, Time and Space Complexity - Best, Worst and Average Case Complexities, Asymptotic Notations - Big-Oh ( $O$ ), Big- Omega ( $\Omega$ ), Big-Theta ( $\Theta$ ), Little-oh ( $o$ ) and Little- Omega ( $\omega$ ) and their properties. Classifying functions by their asymptotic growth rate, Time and Space Complexity Calculation of simple algorithms.

Analysis of Recursive Algorithms: Recurrence Equations, Solving Recurrence Equations – Iteration Method, Recursion Tree Method, Substitution method and Master’s Theorem (Proof not required).

### Module–2 (Advanced Data Structures and Graph Algorithms)

Self Balancing Tree - AVL Trees (Insertion and deletion operations with all rotations in detail, algorithms not expected); Disjoint Sets- Disjoint set operations, Union and find algorithms.

DFS and BFS traversals - Analysis, Strongly Connected Components of a Directed graph, Topological Sorting.

### Module–3 (Divide & Conquer and Greedy Strategy)

The Control Abstraction of Divide and Conquer- 2-way Merge sort, Strassen’s Algorithm for Matrix Multiplication-Analysis. The Control Abstraction of Greedy Strategy- Fractional Knapsack Problem, Minimum Cost Spanning Tree Computation- Kruskal’s Algorithms - Analysis, Single Source Shortest Path Algorithm - Dijkstra’s Algorithm-Analysis.

### Module-4 (Dynamic Programming, Back Tracking and Branch & Bound))

The Control Abstraction- The Optimality Principle- Matrix Chain Multiplication-Analysis, All Pairs Shortest Path Algorithm - Floyd-Warshall Algorithm-Analysis. The Control Abstraction of Back Tracking – The N Queen’s Problem. Branch and Bound Algorithm for Travelling Salesman Problem.

### Module-5 (Introduction to Complexity Theory)

Tractable and Intractable Problems, Complexity Classes – P, NP, NP- Hard and NP-Complete Classes- NP Completeness proof of Clique Problem and Vertex Cover Problem- Approximation algorithms- Bin Packing, Graph Coloring. Randomized Algorithms (Definitions of Monte Carlo and Las Vegas algorithms), Randomized version of Quick Sort algorithm with analysis.

### Text Books

1. T.H.Cormen, C.E.Leiserson, R.L.Rivest, C. Stein, Introduction to Algorithms, 2<sup>nd</sup> Edition, Prentice-Hall India (2001)
2. Ellis Horowitz, Sartaj Sahni, Sanguthevar Rajasekaran, “Fundamentals of Computer Algorithms”, 2<sup>nd</sup> Edition, Orient Longman Universities Press (2008)

3. Sara Baase and Allen Van Gelder —Computer Algorithms, Introduction to Design and Analysis, 3<sup>rd</sup> Edition, Pearson Education (2009)

**Reference Books**

1. Jon Kleinberg, Eva Tardos, “Algorithm Design”, First Edition, Pearson (2005)
2. Robert Sedgewick, Kevin Wayne, “Algorithms”, 4th Edition Pearson (2011)
3. Gilles Brassard, Paul Bratley, “Fundamentals of Algorithmics”, Pearson (1996)
4. Steven S. Skiena, “The Algorithm Design Manual”, 2<sup>nd</sup> Edition, Springer(2008)

**Course Level Assessment Questions**

**Course Outcome 1 (CO1):**

1. Is  $2^{n+1} = O(2^n)$  ? Is  $2^{2n} = O(2^n)$ ? Justify your answer.
2. What is the need of asymptotic analysis in calculating time complexity? What are the notations used for asymptotic analysis?
3. Calculate the time complexity for addition of two matrices.
4. Define time complexity and space complexity. Write an algorithm for adding n natural numbers and analyse the time and space requirements of the algorithm.

**Course Outcome 2 (CO2):**

1. State Master’s theorem for solving recurrences.
2. Solve the recurrence  $T(n) = 3T(n-2)$ , using iteration method
3. State the conditions in recurrences where Master Theorem is not applicable.
4. Solve the following recurrence equations using Master’s theorem.
  - a)  $T(n) = 8T(n/2) + 100n^2$
  - b)  $T(n) = 2T(n/2) + 10n$
5. Using Recursion Tree method, Solve  $T(n) = 2T(n/10) + T(9n/10) + n$ . Assume constant time for small values of n.

**Course Outcome 3 (CO3):**

1. Explain the rotations performed for insertion in AVL tree with example.
2. Write down BFS algorithm and analyse the time complexity. Perform BFS traversal on the given graph starting from node A. If multiple node choices are available for next travel, choose the next node in alphabetical order.

3. Find the minimum and maximum height of any AVL-tree with 7 nodes? Assume that the height of a tree with a single node is 0. (3)
4. Find any three topological orderings of the given graph.

**Course Outcome 4 (CO4):**

1. Give the control abstraction for Divide and Conquer method.
2. Construct the minimum spanning tree for the given graph using Kruskal’s algorithm. Analyse the complexity of the algorithm.

3. Compare Divide and Conquer and Dynamic programming methodologies
4. What is Principle of Optimality?
5. Define Travelling Salesman Problem (TSP). Apply branch and bound algorithm to solve TSP for the following graph, assuming the start city as ‘a’. Draw the state space tree.

**Course Outcome 5 (CO5):**

1. Compare Tractable and Intractable Problems
2. With the help of suitable code sequence convince Vertex Cover Problem is an example of NP-Complete Problem

3. Explain Vertex Cover problem using an example. Suggest an algorithm for finding Vertex Cover of a graph.
4. Write short notes on approximation algorithms.
5. Compare Conventional quick sort algorithm and Randomized quicksort with the help of a suitable example?

**Course Outcome 6 (CO6):** (CO attainment through assignment only, not meant for examinations)

Choosing the best algorithm design strategy for a given problem after applying applicable design strategies – Sample Problems Given.

1. Finding the Smallest and Largest elements in an array of 'n' numbers
2. Fibonacci Sequence Generation.
3. Merge Sort
4. Travelling Sales Man Problem
5. 0/1 Knapsack Problem

### Model Question Paper

**QP CODE:**

**Reg No:** \_\_\_\_\_

**Name:** \_\_\_\_\_

**PAGES : 4**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**SIXTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: CST 306**

**Course Name: Algorithm Analysis and Design**

**Max. Marks : 100**

**Duration: 3 Hours**

#### PART A

**Answer All Questions. Each Question Carries 3 Marks**

1. Define asymptotic notation? Arrange the following functions in increasing order of asymptotic growth rate.

$n^3, 2^n, \log n^3, 2^{100}, n^2 \log n, n^n, \log n, n^{0.3}, 2^{\log n}$

2. State Master's Theorem. Find the solution to the following recurrence equations using Master's theorem.

a)  $T(n) = 8T(n/2) + 100n^2$

b)  $T(n) = 2T(n/2) + 10n$

3. Find any two topological ordering of the DAG given below.

4. Show the UNION operation using linked list representation of disjoint sets.
5. Write the control abstraction of greedy strategy to solve a problem.
6. Write an algorithm based on divide-and-conquer strategy to search an element in a given list. Assume that the elements of list are in sorted order.
7. List the sequence of steps to be followed in Dynamic Programming approach.
8. Illustrate how optimal substructure property could be maintained in Floyd-Warshall algorithm.
9. Differentiate between P and NP problems.
10. Specify the relevance of approximation algorithms.

(10x3=30)

**Part B**

(Answer any one question from each module. Each question carries 14 Marks)

11. (a) Define Big O, Big  $\Omega$  and Big  $\Theta$  Notation and illustrate them graphically. (7)

- (b) Solve the following recurrence equation using recursion tree method (7)

$$T(n) = T(n/3) + T(2n/3) + n, \text{ where } n > 1$$

$$T(n) = 1, \text{ Otherwise}$$

**OR**

12. (a) Explain the iteration method for solving recurrences and solve the following recurrence equation using iteration method. (7)

$$T(n) = 3T(n/3) + n; T(1) = 1$$

- (b) Determine the time complexities of the following two functions fun1() and fun2(). (7)

```

i)  int fun1(int n)
    {
        if (n <= 1) return n;
        return 2*fun1(n-1);
    }
ii) int fun2 (int n)
    {
        if (n <= 1) return n;
        return fun2 (n-1) + fun2 (n-1)
    }

```

13. (a) Write DFS algorithm and analyse its time complexity. Illustrate the classification of edges in DFS traversal. (7)

- (b) Find the strongly connected components of the digraph given below: (7)

**OR**

14. (a) Illustrate the advantage of height balanced binary search trees over binary search trees? Explain various rotations in AVL trees with example. (7)

- (b) Perform the following operations in the given AVL trees. (7)

i) Insert 70

ii) Delete 55

15. (a) State Fractional Knapsack Problem and write Greedy Algorithm for Fractional Knapsack Problem. (7)
- (b) Find the optimal solution for the following Fractional Knapsack problem. Given the number of items( $n$ ) = 7, capacity of sack( $m$ ) = 15,  $W = \{2, 3, 5, 7, 1, 4, 1\}$  and  $P = \{10, 5, 15, 7, 6, 18, 3\}$  (7)

OR

16. (a) Write and explain merge sort algorithm using divide and conquer strategy using the data  $\{30, 19, 35, 3, 9, 46, 10\}$ . Also analyse the time complexity. (7)
- (b) Write the pseudo code for Dijkstra's algorithm. Compute the shortest distance from vertex 1 to all other vertices using Dijkstra's algorithm. (7)

17. (a) Write Floyd-Warshall algorithm and analyse its complexity. (5)
- (b) Write and explain the algorithm to find the optimal parenthesization of matrix chain product whose sequence of dimension is  $4 \times 10, 10 \times 3, 3 \times 12, 12 \times 20$ . (9)

OR

18. (a) Explain the concept of Backtracking method using 4 Queens problem. (7)

- (b) Define Travelling Salesman Problem (TSP). Apply branch and bound algorithm to solve TSP for the following graph, assuming the start city as 'a'. Draw the state space tree. (7)

19. (a) State bin packing problem? Explain the first fit decreasing strategy (7)
- (b) Prove that the Clique problem is NP-Complete. (7)
- OR**
20. (a) Explain the need for randomized algorithms. Differentiate Las Vegas and Monte Carlo algorithms. (6)
- (b) Explain randomized quicksort and analyse the expected running time of randomized quicksort with the help of a suitable example? (9)

**Teaching Plan**

| No   | Topic   | No. of Hours (45 hrs) |
|--|---|-----------------------|
| <b>Module -1 (Introduction to Algorithm Analysis) 9 hrs.</b> |   |                       |
| 1.1  | Introduction to Algorithm Analysis: Characteristics of Algorithms.  | 1 hour                |
| 1.2  | Criteria for Analysing Algorithms, Time and Space Complexity - Best, Worst and Average Case Complexities.                                       | 1 hour                |
| 1.3  | Asymptotic Notations - Properties of Big-Oh (O), Big- Omega ( $\Omega$ ), Big-Theta ( $\Theta$ ), Little-Oh (o) and Little- Omega ( $\omega$ ). | 1 hour                |
| 1.4  | Illustration of Asymptotic Notations  | 1 hour                |

|   |  |        |
|---|--|--------|
| 1.5   | Classifying functions by their asymptotic growth rate  | 1 hour |
| 1.6   | Time and Space Complexity Calculation of algorithms/code segments.                                       | 1 hour |
| 1.7   | Analysis of Recursive Algorithms: Recurrence Equations, Solving Recurrence Equations – Iteration Method. | 1 hour |
| 1.8   | Recursion Tree Method  | 1 hour |
| 1.9   | Substitution method and Master’s Theorem and its Illustration.   | 1 hour |
| <b>Module-2 (Advanced Data Structures and Graph Algorithms) 10 Hrs.</b> |  |        |
| 2.1   | Self Balancing Trees - Properties of AVL Trees, Rotations of AVL Trees                                   | 1 hour |
| 2.2   | AVL Trees Insertion and Illustration   | 1 hour |
| 2.3   | AVL Trees Deletion and Illustration  | 1 hour |
| 2.4   | Disjoint set operations.   | 1 hour |
| 2.5   | Union and find algorithms.   | 1 hour |
| 2.6   | Illustration of Union and find algorithms  | 1 hour |
| 2.7   | Graph Algorithms: BFS traversal, Analysis.   | 1 hour |
| 2.8   | DFS traversal, Analysis.   | 1 hour |
| 2.9   | Strongly connected components of a Directed graph.   | 1 hour |
| 2.10  | Topological Sorting.   | 1 hour |
| <b>Module-3 (Divide &amp; Conquer and Greedy Method) 8 Hrs</b>          |  |        |
| 3.1   | Divide and Conquer: The Control Abstraction.   | 1 hour |
| 3.2   | 2-way Merge Sort, Analysis.  | 1 hour |
| 3.3   | Strassen’s Algorithm for Matrix Multiplication, Analysis   | 1 hour |

|  |   |        |
|--|---|--------|
| 3.4  | Greedy Strategy: The Control Abstraction.   | 1 hour |
| 3.5  | Fractional Knapsack Problem.  | 1 hour |
| 3.6  | Minimum Cost Spanning Tree Computation- Kruskal's Algorithm, Analysis.                    | 1 hour |
| 3.7  | Single Source Shortest Path Algorithm - Dijkstra's Algorithm                              | 1 hour |
| 3.8  | Illustration of Dijkstra's Algorithm-Analysis.  | 1 hour |
| <b>Module-4 (Dynamic Programming, Back Tracking and Branch and Bound) 8 Hrs.</b> |   |        |
| 4.1  | Dynamic Programming: The Control Abstraction, The Optimality Principle.                   | 1 hour |
| 4.2  | Matrix Chain Multiplication-Analysis.   | 1 hour |
| 4.3  | Illustration of Matrix Chain Multiplication-Analysis.                                     | 1 hour |
| 4.4  | All Pairs Shortest Path Algorithm- Analysis and Illustration of Floyd-Warshall Algorithm. | 1 hour |
| 4.5  | Back Tracking: The Control Abstraction .  | 1 hour |
| 4.6  | Back Tracking: The Control Abstraction – The N Queen's Problem.                           | 1 hour |
| 4.7  | Branch and Bound:- Travelling salesman problem.   | 1 hour |
| 4.8  | Branch and Bound:- Travelling salesman problem.   | 1 hour |
| <b>Module-5 (Introduction to Complexity Theory) 10 Hrs</b>                       |   |        |
| 5.1  | Introduction to Complexity Theory: Tractable and Intractable Problems.                    | 1 hour |
| 5.2  | Complexity Classes – P, NP.   | 1 hour |
| 5.3  | NP- Hard and NP-Complete Problems.  | 1 hour |
| 5.4  | NP Completeness Proof of Clique Problem.  | 1 hour |

|      |  |        |
|------|--|--------|
| 5.5  | NP Completeness Proof of Vertex Cover Problem.                               | 1 hour |
| 5.6  | Approximation algorithms- Bin Packing Algorithm and Illustration.            | 1 hour |
| 5.7  | Graph Colouring Algorithm and Illustration.                                  | 1 hour |
| 5.8  | Randomized Algorithms (definitions of Monte Carlo and Las Vegas algorithms). | 1 hour |
| 5.9  | Randomized Version of Quick Sort Algorithm with Analysis.                    | 1 hour |
| 5.10 | Illustration of Randomized Version of Quick Sort Algorithm with Analysis.    | 1 hour |

### Preamble:

This course enables the learners to understand the mathematical foundations of Machine Learning concepts. This course covers Linear Algebra, Probability and Distributions. Concepts in this course help the learners to identify the inherent assumptions & limitations of the current methodologies and develop new Machine Learning solutions.

**Prerequisite:** A sound background in higher secondary school Mathematics.

**Course Outcomes:** After the completion of the course the student will be able to

|             |   |
|-------------|---|
| <b>CO 1</b> | Illustrate operations and applications of linear equations, matrix algebra, vector spaces, eigen values & eigenvectors <b>(Cognitive Knowledge Level: Apply)</b>      |
| <b>CO 2</b> | Illustrate the concepts of orthogonality & diagonalization. <b>(Cognitive Knowledge Level: Apply)</b>   |
| <b>CO 3</b> | Solve computational problems using probability and random variables. <b>(Cognitive Knowledge Level: Apply)</b>  |
| <b>CO 4</b> | Identify an appropriate probability distribution for a given discrete or continuous random variable and use its properties. <b>(Cognitive Knowledge Level: Apply)</b> |
| <b>CO 5</b> | Illustrate moment generating function, law of large numbers and central limit theorems <b>(Cognitive Knowledge Level: Apply)</b>                                      |

### Mapping of course outcomes with program outcomes

**Continuous Internal Evaluation Pattern:**

Attendance : 10 marks

Continuous Assessment Tests : 25 marks

Continuous Assessment Assignment : 15 marks

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks

First Internal Examination shall be preferably conducted after completing the first half of the syllabus and the Second Internal Examination shall be preferably conducted after completing remaining part of the syllabus.

There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly covered module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly covered module), each with 7 marks. Out of the 7 questions in Part B, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer anyone. Each question can have maximum 2 sub-divisions and carry 14 marks.

## Syllabus

### Module 1 (LINEAR ALGEBRA )

Systems of Linear Equations – Matrices, Solving Systems of Linear Equations. Vector Spaces - Linear Independence, Basis and Rank, Linear Mappings.

### Module 2 (LINEAR ALGEBRA )

Norms - Inner Products, Lengths and Distances, Angles and Orthogonality. Orthonormal Basis, Orthogonal Complement, Orthogonal Projections. Matrix Decompositions - Eigenvalues and Eigenvectors, Eigen decomposition and Diagonalization.

### Module 3 (PROBABILITY AND DISTRIBUTIONS)

Probability Space - Sample Spaces, Probability Measures, Computing Probabilities, Conditional Probability, Baye's Rule, Independence. Random Variables - Discrete Random Variables (Bernoulli Random Variables, Binomial Distribution, Geometric and Poisson Distribution, Continuous Random Variables (Exponential Density, Gamma Density, Normal Distribution, Beta Density)

### Module 4 (RANDOM VARIABLES)

Functions of a Random Variable. Joint Distributions - Independent Random Variables, Conditional Distributions, Functions of Jointly Distributed Random Variables.

Expected Values - Expected Value of a Random Variable, Expectations of Functions of Random Variables, Expectations of Linear Combinations of Random Variables, Variance and Standard Deviation, Covariance and Correlation, Conditional Expectation

### Module 5 (LIMIT THEOREMS)

Moment-Generating Function. Limit Theorems(Proof not expected) - Law of Large Numbers, Convergence in Distribution and the Central Limit Theorem. Distributions derived from the Normal Distribution - Chi-square, t, and F Distributions, Sample Mean and the Sample Variance.

2. Axler, Sheldon, Linear Algebra Done Right, 2015 Springer
3. Stephen Boyd and Lieven Vandenberghe, Introduction to Applied Linear Algebra, 2018 published by Cambridge University Press

**Sample Course Level Assessment Questions****Course Outcome 1 (CO1):**

1. Find the set  $S$  of all solutions in  $x$  of the following inhomogeneous linear systems  $Ax = b$ , where  $A$  and  $b$  are defined as follows:

$$A = \begin{bmatrix} 1 & -1 & 0 & 0 & 1 \\ 1 & 1 & 0 & -3 & 0 \\ 2 & -1 & 0 & 1 & -1 \\ -1 & 2 & 0 & -2 & -1 \end{bmatrix}, \quad b = \begin{bmatrix} 3 \\ 6 \\ 5 \\ -1 \end{bmatrix}$$

2. Determine the inverses of the following matrix if possible

$$A = \begin{bmatrix} 1 & 0 & 1 & 0 \\ 0 & 1 & 1 & 0 \\ 1 & 1 & 0 & 1 \\ 1 & 1 & 1 & 0 \end{bmatrix}$$

3. Are the following sets of vectors linearly independent?

$$x_1 = \begin{bmatrix} 2 \\ -1 \\ 3 \end{bmatrix}, \quad x_2 = \begin{bmatrix} 1 \\ 1 \\ -2 \end{bmatrix}, \quad x_3 = \begin{bmatrix} 3 \\ -3 \\ 8 \end{bmatrix}$$

4. A set of  $n$  linearly independent vectors in  $R^n$  forms a basis. Does the set of vectors  $(2, 4, -3)$ ,  $(0, 1, 1)$ ,  $(0, 1, -1)$  form a basis for  $R^3$ ? Explain your reasons.

**Course Outcome 2 (CO2):**

1. Determine which of the following sets are orthogonal sets.

$$\left\{ \begin{bmatrix} 3 \\ 1 \\ 1 \end{bmatrix}, \begin{bmatrix} -1 \\ 2 \\ 1 \end{bmatrix}, \begin{bmatrix} -1/2 \\ -2 \\ 7/2 \end{bmatrix} \right\} \quad \left\{ \begin{bmatrix} 1 \\ -1 \\ 1 \end{bmatrix}, \begin{bmatrix} 2 \\ 1 \\ -1 \end{bmatrix}, \begin{bmatrix} 3 \\ 0 \\ -3 \end{bmatrix} \right\} \quad \left\{ \begin{bmatrix} 3 \\ -2 \\ 1 \\ 3 \end{bmatrix}, \begin{bmatrix} -1 \\ 3 \\ -3 \\ 4 \end{bmatrix}, \begin{bmatrix} 3 \\ 8 \\ 7 \\ 0 \end{bmatrix} \right\}$$

2. Find the characteristic equation, eigenvalues, and eigenspaces corresponding to each eigenvalue of the following matrix.

$$\begin{bmatrix} 2 & 0 & 4 \\ 0 & 3 & 0 \\ 0 & 1 & 2 \end{bmatrix}$$

3. Diagonalize the following matrix, if possible

$$\begin{bmatrix} 3 & 0 & 0 & 0 \\ 0 & 2 & 0 & 0 \\ 0 & 0 & 2 & 0 \\ 1 & 0 & 0 & 3 \end{bmatrix}$$

**Course Outcome 2 (CO3):**

1. Let  $J$  and  $T$  be independent events, where  $P(J)=0.4$  and  $P(T)=0.7$ .
  - i. Find  $P(J \cap T)$
  - ii. Find  $P(J \cup T)$
  - iii. Find  $P(J \cap T')$
2. Let  $A$  and  $B$  be events such that  $P(A)=0.45$ ,  $P(B)=0.35$  and  $P(A \cup B)=0.5$ . Find  $P(A|B)$ .
3. A random variable  $R$  has the probability distribution as shown in the following table:

|               |            |          |          |             |             |
|---------------|------------|----------|----------|-------------|-------------|
| <b>r</b>      | <b>1</b>   | <b>2</b> | <b>3</b> | <b>4</b>    | <b>5</b>    |
| <b>P(R=r)</b> | <b>0.2</b> | <b>a</b> | <b>b</b> | <b>0.25</b> | <b>0.15</b> |

- i. Given that  $E(R)=2.85$ , find  $a$  and  $b$ .
  - ii. Find  $P(R>2)$ .
4. A biased coin (with probability of obtaining a head equal to  $p > 0$ ) is tossed repeatedly and independently until the first head is observed. Compute the probability that the first head appears at an even numbered toss.
  5. Two players A and B are competing at a quiz game involving a series of questions. On any individual question, the probabilities that A and B give the correct answer are  $p$  and  $q$  respectively, for all questions, with outcomes for different questions being independent. The game finishes when a player wins by answering a question correctly. Compute the probability that A wins if
    - i. A answers the first question,
    - ii. B answers the first question.
  6. A coin for which  $P(\text{heads}) = p$  is tossed until two successive tails are obtained. Find the probability that the experiment is completed on the  $n^{\text{th}}$  toss.

#### Course Outcome- 3 (CO4):

1. An urn contains  $p$  black balls,  $q$  white balls, and  $r$  red balls; and  $n$  balls are chosen without replacement.
  - a. Find the joint distribution of the numbers of black, white, and red balls in the sample.
  - b. Find the joint distribution of the numbers of black and white balls in the sample.
  - c. Find the marginal distribution of the number of white balls in the sample.
2. Suppose that two components have independent exponentially distributed lifetimes,  $T_1$  and  $T_2$ , with parameters  $\alpha$  and  $\beta$ , respectively. Find (a)  $P(T_1 > T_2)$  and (b)  $P(T_1 > 2 T_2)$ .
3. Let  $Z_1$  and  $Z_2$  be independent random variables each having the standard normal distribution. Define the random variables  $X$  and  $Y$  by  $X = Z_1 + 3Z_2$  and  $Y = Z_1 + Z_2$ . Argue that the joint distribution of  $(X, Y)$  is a bivariate normal distribution. What are the parameters of this distribution?

4. Given a continuous random variable  $x$ , with cumulative distribution function  $F_x(x)$ , show that the random variable  $y = F_x(x)$  is uniformly distributed.
5. You roll a fair dice twice. Let the random variable  $X$  be the product of the outcomes of the two rolls. What is the probability mass function of  $X$ ? What are the expected values and the standard deviation of  $X$ ?
6. Let  $X$  be a continuous random variable with the density function  $f(x) = 2x, 0 \leq x \leq 1$ 
  - a. Find  $E(X)$ .
  - b. Find  $E(X^2)$  and  $Var(X)$ .

**Course Outcome 5 (CO5):**

1. Find the moment-generating function of a Bernoulli random variable, and use it to find the mean, variance, and third moment.
2. Use moment-generating functions to show that if  $X$  and  $Y$  are independent, then  $Var(aX + bY) = a^2Var(X) + b^2Var(Y)$ .
3. Suppose that you bet Rs 5 on each of a sequence of 50 independent fair games. Use the central limit theorem to approximate the probability that you will lose more than Rs 75.
4. Suppose that the number of insurance claims,  $N$ , filed in a year is Poisson distributed with  $E(N) = 10,000$ . Use the normal approximation to the Poisson to approximate  $P(N > 10,200)$ .

**Model Question paper**

QP Code :

**Total Pages: 4**

Reg No.: \_\_\_\_\_

Name: \_\_\_\_\_

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**  
 SIXTH SEMESTER B.TECH DEGREE EXAMINATION (ELECTIVE), MONTH and YEAR

**Course Code: CST 312****Course Name: FOUNDATIONS OF MACHINE LEARNING**

Max. Marks: 100

Duration: 3 Hours

**PART A***Answer all questions, each carries 3 marks.*

- 1 Show that with the usual operation of scalar multiplication but with addition on reals given by  $x \# y = 2(x + y)$  is not a vector space.
- 2 Are the following vectors linearly independent? Justify your answer.

$$x_1 = \begin{bmatrix} 2 \\ -1 \\ 3 \end{bmatrix}, \quad x_2 = \begin{bmatrix} 1 \\ 1 \\ -2 \end{bmatrix}, \quad x_3 = \begin{bmatrix} 3 \\ -3 \\ 8 \end{bmatrix}$$

- 3 Find the eigenvalues of the following matrix in terms of k. Can you find an eigenvector corresponding to each of the eigenvalues?

$$\begin{bmatrix} 1 & k \\ 2 & 1 \end{bmatrix}$$

- 4 Find a unit vector in  $\mathbf{R}^2$  that is orthogonal to  $(-1, 2)$ .
- 5 The first three digits of a telephone number are 452. If all the sequences of the remaining four digits are equally likely, what is the probability that a randomly selected telephone number contains seven distinct digits?

- 6 Show that if two events  $A$  and  $B$  are independent, then  $A$  and  $B'$  are independent.
- 7 Prove that  $X$  and  $Y$  are independent if and only if  $f_{X|Y}(x|y) = f_X(x)$  for all  $x$  and  $y$ .
- 8 If  $X$  is a discrete uniform random variable, i.e.,  $P(X = k) = 1/n$  for  $k = 1, 2, \dots, n$ , find  $E(X)$  and  $Var(X)$ .
- 9 Compare the Poisson cdf and the normal approximation for (a)  $\lambda = 10$ , (b)  $\lambda = 20$ , and (c)  $\lambda = 40$ .
- 10 State law of large numbers. 10 x 3 = 30

**PART B**

*Answer any one Question from each module. Each question carries 14 Marks*

- 11 a) Find all solutions to the system of linear equations (8)

$$\begin{aligned} -4x + 5z &= -2 \\ -3x - 3y + 5z &= 3 \\ -x + 2y + 2z &= -1 \end{aligned}$$

- b) Consider the transformation  $T(x, y) = (x + y, x + 2y, 2x + 3y)$ . Obtain  $\ker T$  and use this to calculate the nullity. Also find the transformation matrix for  $T$ . (6)

OR

- 12 a) Consider the following linear mapping (8)

$$\Phi : \mathbb{R}^3 \rightarrow \mathbb{R}^4$$

$$\Phi \left( \begin{pmatrix} x_1 \\ x_2 \\ x_3 \end{pmatrix} \right) = \begin{bmatrix} 3x_1 + 2x_2 + x_3 \\ x_1 + x_2 + x_3 \\ x_1 - 3x_2 \\ 2x_1 + 3x_2 + x_3 \end{bmatrix}$$

- i. Find the transformation matrix  $T$ .
- ii. Determine  $\text{rank}(T)$ .

iii. Compute the kernel and image of the mapping and find their dimension

b) Prove that all vectors orthogonal to  $[2, -3, 1]^T$  forms a subspace  $W$  of  $\mathbf{R}^3$ . What is  $\dim(W)$  and why? (6)

13 a) Find an orthonormal basis of  $\mathbf{R}^3$  consisting of eigenvectors for the following matrix (8)

$$\begin{bmatrix} 1 & 0 & -2 \\ 0 & 5 & 0 \\ -2 & 0 & 4 \end{bmatrix}$$

b) Find a  $3 \times 3$  orthogonal matrix  $S$  and a  $3 \times 3$  diagonal matrix  $D$  such that  $A = SDS^T$  (6)

OR

14 a) Find an orthogonal basis for the subspace of  $\mathbf{R}^4$  spanned by  $\{w_1 = (1, 1, 3, 2), w_2 = (1, -2, 0, -1), w_3 = (0, 2, 1, 2)\}$ . (8)

b) Find the characteristic equation, eigenvalues, and eigenspaces corresponding to each eigenvalue of the following matrix (6)

$$\begin{bmatrix} 2 & 0 & 4 \\ 0 & 3 & 0 \\ 0 & 1 & 2 \end{bmatrix}$$

15 a) Three players play 10 independent rounds of a game, and each player has probability  $1/3$  of winning each round. Find the joint distribution of the numbers of games won by each of the three players. (7)

b) An experiment consists of throwing a fair coin four times. Find the probability mass function and the cumulative distribution function of the following random variables: (7)

- i. the number of heads before the first tail
- ii. the number of heads following the first tail
- iii. the number of heads minus the number of tails
- iv. the number of tails times the number of heads.

OR

- 16 a) A factory runs three shifts. On a given day, 1% of the items produced by the first shift are defective, 2% of the second shift's items are defective, and 5% of the third shift's items are defective. If the shifts all have the same productivity, what percentage of the items produced in a day are defective? If an item is defective, what is the probability that it was produced by the third shift? (8)
- b) Show that if  $A$  and  $B$  are two independent events, then  $P(A \cup B) = P(A) + P(B) - P(A)P(B)$  (6)
- 17 a) Find the joint density of  $X + Y$  and  $X/Y$ , where  $X$  and  $Y$  are independent exponential random variables with parameter  $\lambda$ . Show that  $X + Y$  and  $X/Y$  are independent. (8)
- b) Let  $X$  be a discrete random variable that takes on values 0, 1, 2 with probabilities  $1/2, 3/8, 1/8$ , respectively. (6)
- i. Find  $E(X)$  and  $Var(X)$ .
  - ii. Let  $Y = X^2$ . Find the probability mass function of  $Y$  and use it to find  $E(Y)$ .
- 18 a) A random square has a side length that is a uniform  $[0, 1]$  random variable. Find the expected area of the square. (7)
- b) Let  $X$  be a continuous random variable with probability density function on  $0 \leq x \leq 1$  defined by  $f(x) = 3x^2$ . Find the pdf of  $Y = X^2$ . (7)
- 19 a) Using the fact that the mean of the chi-squared distribution is  $(n-1)$ , prove that  $E(S^2) = \sigma^2$ . (7)
- b) i. Random samples of size 36 are taken from an infinite population whose mean is 80 and standard deviation is 18. Find the mean and standard error of the (7)

sampling distribution.

ii. Why is the Central Limit Theorem so important to statistical analysis?

**OR**

- 20 a) A six-sided die is rolled 100 times. Using the normal approximation, find the probability that the face showing a six turns up between 15 and 20 times. Find the probability that the sum of the face values of the 100 trials is less than 300. **(8)**
- b) Determine an interval **(a, b)** such that  $P[a \leq t \leq b] = 0.80$ , and that 10% of the area is on each side of **a** and **b**, assuming that the sample is of size 21. **(6)**

**Preamble:** This course helps the learner to understand the concepts of data mining and data warehousing. It covers the key processes of data mining, data preprocessing techniques, fundamentals and advanced concepts of classification, clustering, association rule mining, web mining and text mining. It enables the learners to develop new data mining algorithms and apply the existing algorithms in real-world scenarios.

Prerequisite: NIL

**Course Outcomes:** After the completion of the course the student will be able to

|     |   |
|-----|---|
| CO1 | Explain the key process of data mining and data warehousing in application domains. <b>(Cognitive Knowledge Level: Understand)</b>                                  |
| CO2 | Make use of appropriate preprocessing techniques to convert raw data into suitable format for practical data mining tasks <b>(Cognitive Knowledge Level: Apply)</b> |
| CO3 | Use classification and clustering algorithms in various application domains. <b>(Cognitive Knowledge Level: Apply)</b>  |
| CO4 | Comprehend the use of association rule mining techniques. <b>(Cognitive Knowledge Level: Apply)</b>   |
| CO5 | Explain advanced data mining concepts and their applications in emerging domains <b>(Cognitive Knowledge Level: Understand)</b>                                     |

Assessment Pattern

| Bloom's Category | Continuous Assessment Tests |                | End Semester Examination Marks |
|------------------|-----------------------------|----------------|--------------------------------|
|                  | Test 1 (Marks)              | Test 2 (Marks) |                                |
| Remember         | 20                          | 20             | 20                             |
| Understand       | 30                          | 30             | 30                             |
| Apply            | 50                          | 50             | 50                             |
| Analyze          |                             |                |                                |
| Evaluate         |                             |                |                                |
| Create           |                             |                |                                |

Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 hours      |

**Continuous Internal Evaluation Pattern:**

|                                    |            |
|------------------------------------|------------|
| Attendance                         | : 10 marks |
| Continuous Assessment - Test       | : 25 marks |
| Continuous Assessment - Assignment | : 15 marks |

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 2 sub-divisions and carries 14 marks.

**Syllabus****Module – 1 (Introduction to Data Mining and Data Warehousing)**

Data warehouse-Differences between Operational Database Systems and Data Warehouses, Multidimensional data model- Warehouse schema, OLAP Operations, Data Warehouse Architecture, Data Warehousing to Data Mining, Data Mining Concepts and Applications, Knowledge Discovery in Database Vs Data mining, Architecture of typical data mining system, Data Mining Functionalities, Data Mining Issues.

**Module - 2 (Data Preprocessing)**

Data Preprocessing-Need of data preprocessing, Data Cleaning- Missing values, Noisy data, Data Integration and Transformation, Data Reduction-Data cube aggregation, Attribute subset selection,

Dimensionality reduction, Numerosity reduction, Discretization and concept hierarchy generation.

### **Module - 3 (Advanced classification)**

Classification Models: Introduction to Classification and Prediction, Issues regarding classification and prediction, Decision Tree- ID3, C4.5, Naive Bayes Classifier.

Rule based classification- 1R, Neural Networks-Back propagation. Support Vector Machines, Lazy Learners-K Nearest Neighbor Classifier. Accuracy and error measures evaluation. Prediction: -Linear Regression and Non-Linear Regression.

### **Module 4 (Association Rule Analysis)**

Association Rules Mining: Concepts, Apriori and FP-Growth Algorithm. Cluster Analysis: Introduction, Concepts, Types of data in cluster analysis, Categorization of clustering methods. Partitioning method- K-Means and K-Medoid Clustering.

### **Module 5 (Advanced Data Mining Techniques)**

Hierarchical Clustering method: BIRCH. Density-Based Clustering –DBSCAN and OPTICS. Advanced Data Mining Techniques- Introduction, Web Mining- Web Content Mining, Web Structure Mining, Web Usage Mining. Text Mining. Graph mining- Apriori based approach for mining frequent subgraphs. Social Network Analysis- characteristics of social networks. Link mining- Tasks and challenges. WEKA tool.

#### **Text Books**

1. Dunham M H, “Data Mining: Introductory and Advanced Topics”, Pearson Education, New Delhi, 2003.
2. Arun K Pujari, “Data Mining Techniques”, Universities Press Private Limited, 2008.
3. Jaiwei Han and Micheline Kamber, “Data Mining Concepts and Techniques”, Elsevier, 2006.

#### **Reference Books**

1. M Sudeep Elayidom, “Data Mining and Warehousing”, 1st Edition, 2015, Cengage Learning India Pvt. Ltd.
2. Mehmed Kantardzic, “Data Mining Concepts, Methods and Algorithms”, John Wiley and Sons, USA, 2003.
3. Pang-Ning Tan and Michael Steinbach, “Introduction to Data Mining”, Addison Wesley, 2006.

**Sample Course Level Assessment Questions:****Course Outcome 1 (CO1):**

1. (a) Explain the OLAP operations in a multidimensional model.  
(b) Compare the techniques used in ROLAP, MOLAP and HOLAP.
2. Explain the various data mining issues with respect to mining methodology, user interaction and diversity of data types.
3. Suppose that a data warehouse consists of the three dimensions time, doctor, and patient, and the two measures count and charge, where charge is the fee that a doctor charges a patient for a visit.
  - a) Draw star and snowflake schema diagrams for the data warehouse.
  - b) Starting with the base cuboid [day; doctor; patient], what specific OLAP operations should be performed in order to list the total fee collected by each doctor in 2004?

**Course Outcome 2 (CO2):**

1. Use the methods below to normalize the following group of data: 100, 200, 300, 400, 550, 600, 680, 850, 1000
  - (a) min-max normalization by setting min = 0 and max = 1.
  - (b) z-score normalization.
  - (c) Normalization by decimal scaling.

Comment on which method you would prefer to use for the given data, giving reasons as to why.

2. Identify a suitable dataset from any available resources and apply different preprocessing steps that you have learned. Observe and analyze the output obtained.

**Course Outcome 3 (CO3):**

1. Illustrate the working of ID3 algorithm with the following example.

| MOTOR | WHEELS | DOORS | SIZE   | TYPE       | CLASS      |
|-------|--------|-------|--------|------------|------------|
| NO    | 2      | 0     | small  | cycle      | bicycle    |
| NO    | 3      | 0     | small  | cycle      | tricycle   |
| YES   | 2      | 0     | small  | cycle      | motorcycle |
| YES   | 4      | 2     | small  | automobile | Sports car |
| YES   | 4      | 3     | medium | automobile | minivan    |
| YES   | 4      | 4     | medium | automobile | sedan      |
| YES   | 4      | 4     | large  | automobile | sumo       |

2. Illustrate the working of K medoid algorithm for the given dataset. A1= (3,9), A2= (2,5), A3= (8,4), A4= (5,8), A5= (7,5), A6= (6,4), A7= (1,2), A8= (4,9).

3. Take a suitable dataset from available resources and apply all the classification and clustering algorithms that you have studied on original and preprocessed datasets. Analyze the performance variation in terms of different quality metrics. Give a detailed report based on the analysis.

#### Course Outcome 4 (CO4):

1. A database has five transactions. Let min sup = 60% and min conf = 80%.

| <i>TID</i> | <i>items_bought</i> |
|------------|---------------------|
| T100       | {M, O, N, K, E, Y}  |
| T200       | {D, O, N, K, E, Y}  |
| T300       | {M, A, K, E}        |
| T400       | {M, U, C, K, Y}     |
| T500       | {C, O, O, K, I, E}  |

- a) Find all frequent item sets using Apriori and FP-growth, respectively. Compare the efficiency of the two mining processes.
- b) List all of the strong association rules (with support  $s$  and confidence  $c$ ) matching the following meta rule, where  $X$  is a variable representing customers, and  $item$  denotes variables representing items (e.g., "A", "B", etc.)

$$\forall x \in \text{transaction}, \text{buys}(X, \text{item}_1) \wedge \text{buys}(X, \text{item}_2) \Rightarrow \text{buys}(X, \text{item}_3) \quad [s, c]$$

2. Identify and list some scenarios in which association rule mining can be used, and then use at least two appropriate association rule mining techniques in one of the two scenarios.

#### Course Outcome 5 (CO5):

1. Consider an e-mail database that stores a large number of electronic mail (e-mail) messages. It can be viewed as a semi structured database consisting mainly of text data.

Discuss the following.

- a. How can such an e-mail database be structured so as to facilitate multidimensional search, such as by sender, by receiver, by subject, and by time?
- b. What can be mined from such an e-mail database?

- c. Suppose you have roughly classified a set of your previous e-mail messages as junk, unimportant, normal, or important. Describe how a data mining system may take this as the training set to automatically classify new e-mail messages or unclassified ones.
2. Precision and recall are two essential quality measures of an information retrieval system.
  - (a) Explain why it is the usual practice to trade one measure for the other.
  - (b) Explain why the F-score is a good measure for this purpose.
  - (c) Illustrate the methods that may effectively improve the F-score in an information retrieval system.
3. Explain DBSCAN algorithm with an example.

**Model Question Paper**

**QP CODE:**

**Reg No:** \_\_\_\_\_

**Name:** \_\_\_\_\_

**PAGES : 4**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**SIXTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: CXT 322**

**Course Name: Data Mining**

**Max.Marks:100**

**Duration: 3 Hours**

**PART A**

**Answer All Questions. Each Question Carries 3 Marks**

1. What is the purpose of data discretization in data mining? List out any four data discretization strategies.
2. How is a data warehouse different from a database?
3. Explain concept hierarchy with an example.
4. Explain heuristic methods of attribute subset selection techniques.
5. Consider a two-class classification problem of predicting whether a photograph contains a man or a woman. Suppose we have a test dataset of 10 records with expected outcomes and a set of predictions from our classification algorithm. Calculate precision and recall of the data.
6. Given two objects represented by the tuples (22,1,42,10) and (20,0, 36,8). Compute the Euclidean and Manhattan distance between the two objects.

7. What is the significance of CF (Clustering Feature) in BIRCH Algorithm?
8. How to compute the dissimilarity between objects described by binary variables?
9. How density based clustering varies from other methods?
10. Describe any two-text retrieval indexing techniques.

(10x3= 30)

**Part B****(Answer any one question from each module. Each question carries 14 Marks)**

- 11 (a)** Suppose a data warehouse consists of three measures: customer, account and branch and two measures count (number of customers in the branch) and balance. Draw the schema diagram using snowflake schema and tar schema. **(7)**
- (b)** Explain three- tier data warehouse architecture with a neat diagram. **(7)**

**OR**

- 12 (a)** Explain various stages in knowledge discovery process with a neat diagram. **(7)**
- (b)** Illustrate different OLAP operations in multidimensional data model. **(7)**
- 13 (a)** Describe various techniques for numerosity reduction in data mining. **(7)**
- (b)** Suppose that the data for analysis includes the attribute age. The age values for the data tuples are (in increasing order) 13, 15, 16, 16, 19, 20, 20, 21, 22, 22, 25, 25, 25, 25, 30, 33, 33, 35, 35, 35, 35, 36, 40, 45, 46, 52, 70. **(7)**
- (1) Use min-max normalization to transform the value 35 for age onto the range [0-1].
- (2) Use z-score normalization to transform the value 35 for age, where the standard deviation of age is 12.94 years.
- (3) Use normalization by decimal scaling to transform the value 35 for age.
- (4) Use smoothing by bin means to smooth the above data, using a bin depth of 3. Illustrate your steps..

**OR**

- 14 (a)** Suppose a group of 12 sales price records has been sorted as follows: 5, 10, 11, 13, 15, 35, 50, 55, 72, 92, 204, 215. Sketch examples of each of the following sampling techniques: SRSWOR, SRSWR, cluster sampling, stratified sampling. Use samples of size 5 and the strata “youth,” “middle aged,” and “senior.” **(8)**
- (b)** Partition the above data into three bins by each of the following methods: **(6)**
- (i) equal-frequency (equi-depth) partitioning
  - (ii) equal-width partitioning

- 15 (a) The following table shows 'Car Theft Database'. Using Naive-Bayes algorithm to classify a **Red Domestic SUV as 'Stolen' or 'Not Stolen'**. (8)

| N  | Color  | Type   | Origin   | Stolen? |
|----|--------|--------|----------|---------|
| 1  | red    | sports | domestic | yes     |
| 2  | red    | sports | domestic | no      |
| 3  | red    | sports | domestic | yes     |
| 4  | yellow | sports | domestic | no      |
| 5  | yellow | sports | imported | yes     |
| 6  | yellow | SUV    | imported | no      |
| 7  | yellow | SUV    | imported | yes     |
| 8  | yellow | SUV    | domestic | no      |
| 9  | red    | SUV    | imported | no      |
| 10 | red    | sports | domestic | yes     |

- (b) How does back propagation algorithm work? (6)

**OR**

- 16 (a) For a sunburn dataset given below, find the first splitting attribute for the decision tree by using the ID3 algorithm. (10)

| Name  | Hair   | Height  | Weight  | Lotion | Class   |
|-------|--------|---------|---------|--------|---------|
| Sarah | Blonde | Average | Light   | No     | Sunburn |
| Dana  | Blonde | Tall    | Average | Yes    | None    |
| Alex  | Brown  | Tall    | Average | Yes    | None    |
| Annie | Blonde | Short   | Average | No     | Sunburn |
| Emily | Red    | Average | Heavy   | No     | Sunburn |
| Pete  | Brown  | Tall    | Heavy   | No     | None    |
| John  | Brown  | Average | Heavy   | No     | None    |
| Katie | Blonde | Short   | Light   | Yes    | None    |

- (b) Describe the purpose of kernel function in SVM with a suitable example (4)
- 17 (a) Suppose that our task is to cluster given sample data (height, weight) into two clusters. (7)  
Let A1 and A2 be initial cluster centroids. Apply k-means algorithm to find a set of clusters. Use Manhattan distance function as dissimilarity measure.

| Id | Height | Weight |
|----|--------|--------|
| A1 | 185    | 72     |
| A2 | 170    | 56     |
| A3 | 168    | 60     |
| A4 | 179    | 68     |
| A5 | 182    | 72     |
| A6 | 188    | 77     |

- (b) A database has five transactions. Let  $\text{min\_sup} = 60\%$  and  $\text{min-con} = 50\%$ . Find all frequent item sets using Apriori algorithm. (7)

| <i>TID</i> | <i>items_bought</i> |
|------------|---------------------|
| T100       | {M,O,N,K,E,Y}       |
| T200       | {D,O,N,K,E,Y}       |
| T300       | {M,A,K,E}           |
| T400       | {M,U,C,K,Y}         |
| T500       | {C,O,O,K,I,E}       |

OR

- 18 (a) A database has six transactions. Let  $\text{min\_sup}$  be 60% and  $\text{min\_conf}$  be 80%. (8)

| <i>TID</i> | <i>items_bought</i> |
|------------|---------------------|
| T1         | I1, I2, I3          |
| T2         | I2, I3, I4          |
| T3         | I4, I5              |
| T4         | I1, I2, I4          |
| T5         | I1, I2, I3, I5      |
| T6         | I1, I2, I3, I4      |

Find frequent itemsets using FP Growth algorithm and generate strong association rules from a three-item dataset.

- (b) Explain K-Medoid Clustering algorithm. (6)

- 19 (a) Describe web content mining techniques. (7)

- (b) Explain BIRCH Clustering Method. (7)

OR

- 20 (a) Define the following terms related to DBSCAN algorithm with suitable figures (8)

- i) Core object.
- ii) Directly density reached.
- iii) Density reachable.
- iv) Density connected.

- (b) Describe different Text retrieval methods. Explain the relationship between text mining and information retrieval and information extraction. (6)

| No  | Contents  | No. of lecture hours (37 Hrs) |
|---|---|-------------------------------|
| <b>Module 1(Introduction to Data Mining and Data Warehousing) (5 hours)</b> |   |                               |
| 1.1   | Introduction to Data warehouse  | 1                             |
| 1.2   | Multidimensional data model, OLAP Operations  | 1                             |
| 1.3   | Data Warehouse Architecture, Data Warehousing to Data Mining                                | 1                             |
| 1.4   | Data Mining Concepts and Applications, Knowledge Discovery in Database Vs Data mining       | 1                             |
| 1.5   | Architecture of typical data mining system, Data Mining Functionalities, Data Mining Issues | 1                             |
| <b>Module 2(Data Preprocessing) (6 hours)</b>                               |   |                               |
| 2.1   | Data Preprocessing: Need of Data Preprocessing, Data Cleaning- Missing values, Noisy data.  | 1                             |
| 2.2   | Data integration  | 1                             |
| 2.3   | Data transformation   | 1                             |
| 2.4   | Data Reduction-Data cube aggregation, Attribute subset selection                            | 1                             |
| 2.5   | Data Reduction-Dimensionality reduction   | 1                             |
| 2.6   | Numerosity reduction, Discretization and concept hierarchy generation                       | 1                             |
| <b>Module 3(Advanced classification and Cluster analysis) (10 hours)</b>    |   |                               |
| 3.1   | Introduction to classification and prediction and its issues                                | 1                             |
| 3.2   | Classification based on Decision tree ID3   | 1                             |
| 3.3   | Decision Tree- ID3, Decision trees C4.5   | 1                             |
| 3.4   | Naïve Bayes Classifier  | 1                             |
| 3.5   | Rule based classification - 1R  | 1                             |
| 3.6   | NN - Back propagation   | 1                             |
| 3.7   | Support vector machine  | 1                             |
| 3.8   | K-nearest neighbor classifier, Accuracy and error measures-evaluation                       | 1                             |
| 3.9   | Linear Regression   | 1                             |
| 3.10  | Non-Linear Regression   | 1                             |
| <b>Module 4(Association Rule Analysis) (7 hours)</b>                        |   |                               |
| 4.1   | Association Rules: Introduction, Methods to discover association rules                      | 1                             |
| 4.2   | Apriori algorithm (Level-wise algorithm)  | 1                             |

|  |   |   |
|--|---|---|
| 4.3  | FP-tree Growth Algorithm  | 1 |
| 4.4  | Improvements in Apriori algorithm   | 1 |
| 4.5  | Clustering introduction, Types of data in cluster analysis                                  | 1 |
| 4.6  | Partition Algorithm – K-Means   | 1 |
| 4.7  | K-Medoid Algorithm  | 1 |
| <b>Module 5(Advanced Data Mining Techniques) (9 hours)</b> |   |   |
| 5.1  | Hierarchical clustering- BIRCH  | 1 |
| 5.2  | Density based clustering-DBSCAN, OPTICS   | 1 |
| 5.3  | Web mining - content, structure   | 1 |
| 5.4  | Web usage mining - Pattern Discovery, Pattern Analysis                                      | 1 |
| 5.5  | Text Mining-Text Data Analysis and information Retrieval, Basic measures for Text retrieval | 1 |
| 5.6  | Text Retrieval methods, Text Indexing Techniques, Query Processing Techniques               | 1 |
| 5.7  | Graph mining  | 1 |
| 5.8  | Social network analysis, link mining  | 1 |
| 5.9  | Weka Tool   | 1 |

| CST<br>342 | AUTOMATED<br>VERIFICATION | Category | L | T | P | CREDIT | YEAR OF<br>INTRODUCTION |
|------------|---------------------------|----------|---|---|---|--------|-------------------------|
|            |                           | PEC      | 2 | 1 | 0 |        |                         |

**le:** This course is intended to impart the basic theory and algorithm for an automatic verification process namely model checking. This course covers finite-state modelling of hardware/software, linear-time properties, classification of linear-time properties, Linear Temporal Logic (LTL) - a formal language for property specification, LTL model checking algorithm and model checking case studies. This course enables the learners to prove correctness of a hardware/software used in safety critical systems in domains such as avionics, health care and automotive.

**Prerequisite:** NIL

**Course Outcomes:** After the completion of the course the student will be able to

|            |   |
|------------|---|
| <b>CO1</b> | Illustrate an application for model checking. <b>(Cognitive Knowledge Level: Understand)</b>                                  |
| <b>CO2</b> | Describe finite-state modelling for hardware and software. <b>(Cognitive Knowledge Level: Understand)</b>                     |
| <b>CO3</b> | Identify linear-time properties required to represent the requirements of a system. <b>(Cognitive Knowledge Level: Apply)</b> |
| <b>CO4</b> | Specify a given linear-time property in Linear Temporal Logic (LTL). <b>(Cognitive Knowledge Level: Apply)</b>                |
| <b>CO5</b> | Perform LTL model checking using the tool Symbolic Analysis Laboratory (SAL). <b>(Cognitive Knowledge Level: Apply)</b>       |

**Mapping of course outcomes with program outcomes**

**Assessment Pattern**

| Bloom's Category | Continuous Assessment Tests |                | End Semester Examination Marks |
|------------------|-----------------------------|----------------|--------------------------------|
|                  | Test 1 (Marks)              | Test 2 (Marks) |                                |
| Remember         | 30                          | 30             | 30                             |
| Understand       | 30                          | 30             | 30                             |
| Apply            | 40                          | 40             | 40                             |
| Analyze          |                             |                |                                |
| Evaluate         |                             |                |                                |
| Create           |                             |                |                                |

**Mark Distribution**

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 hours      |

**Continuous Internal Evaluation Pattern:**

Attendance : 10 marks  
 Continuous Assessment Test : 25 marks  
 Continuous Assessment Assignment : 15 marks (Out 15, 10 marks shall be given for a model checking project to be implemented in SAL.)

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. First series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each

question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 2 sub-divisions and carries 14 marks.

**Syllabus**

**Module - 1 (Introduction to Model Checking)**

System Verification – Hardware and Software Verification, Model Checking, Characteristics of Model Checking.

Transition Systems – Transition System, Direct Predecessors and Successors, Terminal State, Deterministic Transition System.

Executions - Execution Fragment, Maximal and Initial Execution Fragment, Execution, Reachable States.

**Module - 2 (Linear Time Properties)**

Linear-Time (LT) Properties - Deadlock. Linear-Time Behavior - Paths and State Graph, Path Fragment, Maximal and Initial Path Fragment, Path. Traces - Trace and Trace Fragment, LT Properties - LT Property, Satisfaction Relation for LT Properties, Trace Equivalence and LT Properties. Safety Properties and Invariants - Invariants, Safety Properties, Trace Equivalence and Safety properties. Liveness Properties - Liveness Property, Safety vs. Liveness Properties. Fairness - Fairness, Unconditional, Weak and Strong Fairness, Fairness Strategies, Fairness and Safety. (Definition and examples only for all topics - no proof required).

**Module - 3 (Regular Properties)**

Regular Properties - Model Checking Regular Safety properties - Regular Safety property, Verifying Regular Safety Properties. Automata on Infinite Words -  $\omega$ -Regular Languages and Properties, Nondeterministic Buchi Automata (NBA), Deterministic Buchi Automata (DBA),

Generalised Buchi Automata (Definitions only). Model Checking  $\omega$ -Regular Properties - Persistence Properties and Product, Nested Depth-First Search (Only algorithms required).

#### **Module - 4 (Linear Time Logic)**

Linear Temporal Logic (LTL) - Syntax, Semantics, Equivalence of LTL Formulae, Weak Until, Release and Positive Normal Form, Fairness, Safety and Liveness in LTL (Definitions only). Automata Based LTL Model Checking (Algorithms and examples only).

#### **Module - 5 (Model Checking in SAL)**

Introduction - Introduction to the tool Symbolic Analysis Laboratory (SAL).

The Language of SAL - The expression language, The transition Language, The module language, SAL Contexts.

SAL Examples - Mutual Exclusion, Peterson's Protocol, Synchronous Bus Arbiter, Bounded Bakery protocol, Bakery Protocol, Traffic Signalling System.

#### **Text Books**

1. Christel Baier and Joost-Pieter Katoen, Principles of Model Checking, The MIT Press. (Modules 1 - 4)
2. Leonardo de Moura, Sam Owre and N. Shankar, The SAL Language Manual, SRI International (<http://sal.csl.sri.com/doc/language-report.pdf>, Chapters 1, 3, 4, 5, 6, 7) (Module 5)

#### **Reference Materials**

1. SAL Examples (<http://sal.csl.sri.com/examples.shtml>) (Module 5)

#### **Sample Course Level Assessment Questions**

##### **Course Outcome 1 (CO1):**

1. Illustrate how model checking can make a system design reliable, based on a required set of properties/constraints.

##### **Course Outcome 2 (CO2):**

1. Consider a message delivery system. The sender  $s$  is trying to send a series of messages to the receiver  $r$  in such a way that the  $(i+1)^{st}$  message is sent only after the  $i^{th}$  message is delivered. There is a possibility of error in sending a message and in that case,  $s$  keeps on

trying until it is able to send the message. Show a finite state transition system modeling this system.

**Course Outcome 3 (CO3):**

1. Consider a shared memory segment  $s$  protected using a mutex lock variable  $m$ . Two processes  $p_1$  and  $p_2$  are trying to access  $s$ . List the Linear Time properties of the system which will ensure safety, liveness and fairness.

**Course Outcome 4 (CO4):**

1. Show the LTL specifications of the safety, liveness and fairness properties listed for the assessment question given in CO3.

**Course Outcome 5 (CO5):**

1. Model the system mentioned in the question given in CO3 in SAL and verify that the system is correct with respect to the LTL properties shown as the answer for CO4.

**Model Question paper**

**QP CODE:**

**PAGES: 3**

**Reg No:** \_\_\_\_\_

**Name :** \_\_\_\_\_

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**SIXTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: CST342**

**Course Name: Automated Verification**

**Max.Marks:100**

**Duration: 3 Hours**

**PART A**

**Answer all questions. Each question carries 3 marks.**

1. Define model checking. Show the schematic diagram of the model checking approach.
2. Show a transition system modeling a coffee/Tea vending machine.

3. Define invariant as a Linear Time (LT) property. Give an example
4. List any three Linear Time properties in the Mutual Exclusion problem of processes.
5. Illustrate the construction of a product automaton from two automata.
6. Differentiate between Deterministic Buchi Automaton and Non-deterministic Buchi Automaton.
7. Specify the following statements about traffic lights in Linear Temporal Logic (LTL).
  - a. Once red, the light can not become green immediately.
  - b. Once red, the light always becomes green eventually after being yellow for some time.
8. What is Positive Normal Form (PNF) in LTL? Give an example.
9. List any three applications of the tool Symbolic Analysis Laboratory (SAL).
10. What is a SAL context? Give an example.

(10x3=30)

**Part B**

**(Answer any one question from each module. Each question carries 14 Marks)**

11. (a) Explain in detail the various phases of the model checking process. (8)
  - (b) Explain the strengths and weaknesses of model checking. (6)
- OR**
12. (a) Define and illustrate the following terms of a transition system. (14)
    - a. Execution Fragment
    - b. Maximal and Initial Execution Fragment
    - c. Execution
    - d. Reachable States

13. (a) With an example, explain the satisfaction relation for LT properties. (7)

(b) What is trace equivalence in Transition Systems? Give an example to show that if two transition systems satisfy the trace equivalence property, then they satisfy the same set of LT properties. (7)

**OR**

14. (a) Give the transition system for the fault tolerant variant of the dining philosophers problem. (4)

(b) With a suitable example, explain the algorithms to check whether a Transition System satisfies an invariant or not. (10)

15. (a) Explain Regular Safety Properties with a suitable example. (7)

(b) Illustrate an algorithm for verifying Regular Safety Properties. (7)

**OR**

16. (a) Explain  $\omega$ -Regular Properties. (4)

(b) Illustrate how  $\omega$ -Regular Properties are verified. (10)

17. (a) Explain the syntax of Linear Temporal Logic (LTL). (7)

(b) Explain the semantics of LTL. (7)

**OR 4**

18. (a) With an example, give the difference between until and weak until in LTL. (4)

(b) With a suitable example, explain automata based LTL model checking. (10)

19. (a) Explain Peterson's protocol. What are the LTL properties to be verified to ensure its correctness? (8)

(b) Write a SAL script for the verification of Peterson's protocol. (6)

OR

20. (a) Show the SAL model corresponding to Bakery protocol. (8)
- (b) List any three Linear Time properties of this model and show their LTL (6)

### Teaching Plan

|  |  |                |
|--|--|----------------|
| <b>Module 1 (Introduction to Model Checking)</b> |  | <b>4 Hours</b> |
| 1.1  | <b>System Verification</b> – Hardware and Software Verification, Model Checking, Model Checking                                    | 1 Hour         |
| 1.2  | <b>Transition Systems</b> – Transition System, Direct Predecessors and Successors, Terminal State, Deterministic Transition System | 1 Hour         |
| 1.3  | <b>Executions</b> - Execution Fragment, Maximal and Initial Execution Fragment   | 1 Hour         |
| 1.4  | Execution, Reachable States  | 1 Hour         |
| <b>Module 2 (Linear Time Properties)</b>         |  | <b>8 Hours</b> |
| 2.1  | Linear-Time (LT) Properties - Deadlock   | 1 Hour         |
| 2.2  | Linear-Time Behavior - Paths and State Graph, Path Fragment, Maximal and Initial Path Fragment, Path                               | 1 Hour         |
| 2.3  | Traces - Trace and Trace Fragment  | 1 Hour         |
| 2.4  | LT Property, Satisfaction Relation for LT Properties, Trace Equivalence and LT Properties  | 1 Hour         |
| 2.5  | Invariants   | 1 Hour         |
| 2.6  | Safety Properties, Trace Equivalence and Safety properties   | 1 Hour         |
| 2.7  | Liveness Property, Safety vs. Liveness Properties  | 1 Hour         |
| 2.8  | Fairness, Unconditional, Weak and Strong Fairness, Fairness Strategies, Fairness and Safety  | 1 Hour         |
| <b>Module 3 (Regular Properties)</b>             |  | <b>9 Hours</b> |
| 3.1  | <b>Regular Properties</b> - Model Checking Regular Safety properties - Regular Safety property                                     | 1 Hour         |
| 3.2  | Verifying Regular Safety Properties  | 1 Hour         |
| 3.3  | Automata on Infinite Words - $\omega$ -Regular Languages and Properties  | 2 Hour         |

|   |   |                |
|---|---|----------------|
| 3.4                                     | Nondeterministic Buchi Automata (NBA), Deterministic Buchi Automata (DBA), Generalised Buchi Automata | 1 Hour         |
| 3.5                                     | Model Checking $\omega$ -Regular Properties - Persistence Properties and Product - Lecture 1          | 1 Hour         |
| 3.6                                     | Persistence Properties and Product - Lecture 2  | 1 Hour         |
| 3.7                                     | Nested Depth-First Search (Lecture 1)   | 1 Hour         |
| 3.8                                     | Nested Depth-First Search (Lecture 2)   | 1 Hour         |
| <b>Module 4 (Linear Time Logic)</b>     |   | <b>7 Hours</b> |

**Preamble:**

This course helps the learner to study the relevance and underlying infrastructure of multimedia systems. It also enables the students to apply contemporary theories of multimedia learning to the development of multimedia products.

**Prerequisite:** NIL

**Course Outcomes:** After the completion of the course the student will be able to

| CO# | Course Outcomes  |
|-----|--|
| CO1 | Describe the basic concepts of multimedia data representations, color models, audio and video signals and different compression techniques. <b>(Cognitive Knowledge Level: Understand)</b> |
| CO2 | Apply the knowledge of various compression algorithms for developing multimedia applications. <b>(Cognitive Knowledge Level: Apply)</b>  |
| CO3 | Summarize the image compression standards, audio and video compression techniques. <b>(Cognitive Knowledge Level: Understand)</b>  |
| CO4 | Discuss the concepts of content-based image retrieval. <b>(Cognitive Knowledge Level: Understand)</b>  |
| CO5 | Describe the concept of cloud computing and its application in multimedia technologies. <b>(Cognitive Knowledge Level: Understand)</b>   |

**Mark Distribution**

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3            |

**Continuous Internal Evaluation Pattern:**

|   |                 |
|---|-----------------|
| Attendance  | <b>10 marks</b> |
| Continuous Assessment Tests (Average of Series Tests 1 & 2) | <b>25 marks</b> |
| Continuous Assessment Assignment                            | <b>15 marks</b> |

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 full questions from each module of which students should answer any one. Each question can have a maximum 2 subdivisions and carries 14 marks.

**Syllabus****Module 1**

**Multimedia Basics:** Multimedia, Hypermedia, WWW, Internet, Multimedia Software, Editing and Authoring Tools.

**Graphics and Image Data Representation—** Graphics/Image Data Types, Popular File Formats. Color in Image - Color Science, Color Models in Images.

**Concepts in Digital Video-**Digital Video.

**Module 2**

**Basics of Digital Audio—**Digitization of Sound, Musical Instrument Digital Interface (MIDI).

**Lossless Compression Algorithms—** Introduction, Basics of Information Theory, Run-Length Coding, Variable-Length Coding, Dictionary-Based Coding, Arithmetic Coding, Lossless Image Compression.

**Module 3**

**Lossy Compression Algorithms -** Distortion Measures, The Rate- Distortion Theory, Quantization, Transform Coding, Wavelet-Based Coding, Wavelet Packets.

**Image Compression Standards—** JPEG, JPEG2000, JPEG-LS, Bi-level Image Compression Standards.

**Audio Compression Techniques—** ADPCM in Speech Coding, Vocoder, Psychoacoustics, MPEG Audio.

**Module 4**

**Basic Video Compression Techniques -** Introduction to Video Compression, Video Compression Based on Motion Compensation, MPEG-1-Video Bitstream, MPEG-2- Supporting Interlaced Video, MPEG-4 - Overview, MPEG-7- Introduction.

**Content-Based Retrieval in Digital Libraries-** Image Retrieval, CBIRD: A Case Study, Quantifying Search Results, Querying on Videos.

## Module 5

**Cloud Computing for Multimedia Services** - Cloud Computing Overview, Multimedia Cloud Computing, Cloud Assisted Media Sharing, Computation Offloading for Multimedia Services, Interactive Cloud Gaming.

### Text Book

1. Ze-Nian Li and M. S. Drew, *Fundamental of Multimedia.*, Pearson Education,2004

**Course level assessment questions****Course outcome 1 (CO1):**

1. Discuss the relation between multimedia and hypermedia.
2. The Pitch Bend opcode in MIDI is followed by two data bytes specifying how the control is to be altered. How many bits of accuracy does this amount of data correspond to? Why?

**Course outcome 2 (CO2):**

1. Work out the details of the encoder and decoder for adaptive arithmetic coding when the input symbols are 01111.
2. What are the advantages and disadvantages of arithmetic coding as compared to Huffman coding?
3. Assume we have an unbounded source we wish to quantize using an M-bit midtread uniform quantizer. Derive an expression for the total distortion if the step size is 1.

**Course outcome 3 (CO3):**

1. Could we use wavelet-based compression in ordinary JPEG? How?
2. Draw block diagrams for an MPEG-2 encoder and decoder for (a) SNR and spatial hybrid scalability, (b) SNR and temporal hybrid scalability.
3. What is the compression ratio of MPEG audio if stereo audio sampled with 16 bits per sample at 48 kHz is reduced to a bitstream of 256 kbps?

**Course outcome 4 (CO4):**

1. What is the need of content-based image retrieval?
2. How can you evaluate the performance of image search engines?

**Course outcome 5 (CO5):**

1. Differentiate between public and private cloud computing.
2. How does cloud help in live media streaming service?
3. Explain the modules and their relations in multimedia cloud computing.
4. What are the different requirements for computation offloading?
5. Explain different cloud service models.

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

SIXTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: CXT332

Course Name: Multimedia Technologies

Max Marks :100

Duration: 3 Hrs.

PART A

(Answer all Questions. Each question carries 3 Marks)

1. Differentiate between multimedia & hypermedia.
2. What are the different types of tweening?
3. Explain about MIDI.
4. Mention the models used in lossless compression schemes.
5. State the rate- distortion theory.
6. Explain the need of vocoders.
7. What is the need of content-based image retrieval?
8. Draw the architecture for the layers of MPEG-1 video bit streams.
9. Differentiate between public and private cloud computing.
10. How does cloud help in live media streaming service?

(10x3=30)

Part B

(Answer any one question from each module. Each question carries 14 Marks)

11. a) Illustrate the different multimedia software & tools. (8)  
b) Explain about various color models. (6)

OR

12. Explain in detail the different image data types? (14)
13. Explain  
a) Variable length coding (7)  
b) Arithmetic coding. (7)

OR

14. a) Describe vector quantization theory. Discuss its merits over scalar quantization. (8)  
b) Explain the different techniques for digitization of sound. (6)

15. a) Describe the various steps of the JPEG compression process. (7)  
b) Enumerate the difference between JPEG and JBIG standards. (7)

OR

16. a) Explain Bi-level image compression standards. (8)  
b) Differentiate between uniform and non-uniform scalar quantization. (6)

17. a) Illustrate Similarity- Based Retrieval with example. (8)  
b) How can you evaluate the performance of image search engines? (6)

OR

18. Outline the key features of the following  
a) MPEG-2 (7)  
b) MPEG-4 (7)

19. a) Explain different cloud service models. (8)  
b) What are the different requirements for computation offloading? (6)

OR

20. a) Explain the modules and their relations in multimedia cloud computing. (8)  
b) What are the issues and challenges of cloud gaming? (6)

(5 x 14 = 70)

**Preamble:**

This course helps the learner to understand the basic concepts of visual design and communication. This course covers basic elements and principles of design, introduction to design projects, process of color and color theory, value and typeface design and design in visual communication. It enables the learners to perform visual design on a real-world scenario using appropriate tools.

**Prerequisite:** NIL

**Course Outcomes:** After the completion of the course the student will be able to

| <b>CO#</b> | <b>Course Outcomes</b>  |
|------------|---|
| <b>CO1</b> | Summarize the basic ideas concerning the elements that make up a visual design and how these elements are organized. <b>(Cognitive Knowledge Level: Understand)</b> |
| <b>CO2</b> | Make use of digital tools to solve the steps involved in specific design problems <b>(Cognitive Knowledge Level: Apply)</b>   |
| <b>CO3</b> | Describe the key concepts and applications of color and color theory in visual design <b>(Cognitive Knowledge Level: Understand)</b>                                |
| <b>CO4</b> | Explain value and typeface in design principles. <b>(Cognitive Knowledge Level: Understand)</b>   |
| <b>CO5</b> | Describe the concepts of design in visual communication. <b>(Cognitive Knowledge Level: Understand)</b>   |
| <b>CO6</b> | Utilize the basic understanding of design to digitally produce two-dimensional images <b>(Cognitive Knowledge Level: Apply)</b>                                     |

**Mark Distribution**

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3            |

**Continuous Internal Evaluation Pattern:**

|  |                 |
|--|-----------------|
| Attendance   | <b>10 marks</b> |
| Continuous Assessment Tests (Average of Series Tests 1& 2) | <b>25 marks</b> |
| Continuous Assessment Assignment                           | <b>15 marks</b> |

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question

from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

### **End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 full questions from each module of which students should answer any one. Each question can have a maximum 2 subdivisions and carries 14 marks.

## **Syllabus**

### **Module – 1**

**Design Elements:** Introduction, Elements of Design- Line, Shape, Negative Space, Volume, Value, Color, Texture.

**Principles of Design:** Gestalt - Unity or Harmony, Unity and Placement using Line, shape, Repetition using line, shape. Rhythm - Unity using value, Unity and continuity, Variety. Focal point and visual hierarchy, Balance.

### **Module - 2**

**Introduction to design projects:** Conceptual process - research and define problem, preliminary solutions, organized list of options and thumbnail sketches, rough- refined preliminary visual design solutions and alternatives, composites or comps, the final design or finish. Production process- Computer applications used in design, software applications for graphics.

Basic methods of Abstraction: Simplification, Repetition, Line and Shape, Type combination.

### **Module - 3**

**Color and color theory:** Background in color theory - Defining color, Color and unity, Color unity via Tonality, Color and variety, Warm and cool colors, Color discord, Color and design.

Basic problem defined - Conceptual process, mixing colors, mixing and adding colors to the swatches panel.

### **Module - 4**

**Value:** Introduction, changing level of image, Creating the first drawing, Creating the simplified drawing, grouping sublayers, Changing the stacking order of groups in layers, Swatches panel.

**Typeface Design:** Introduction, Historic classification of type, Type styles, Visual and information Hierarchy, Type as an element of design summary.

### **Module - 5**

**Design in Visual Communication:** Introduction, Communication and graphic design, Visual communication and visual design, Design in visual communication, Purpose of design in visual communication, Design products in visual communication for evaluation.

**Text Book**

1. Visual Design Fundamentals: A Digital Approach, Third Edition, Alan Hashimoto and Mike Clayton © 2009 Course Technology, a part of Cengage Learning.
2. Günay, M. (2021). Design in Visual Communication. Art and Design Review, 9, 109-122, Scientific research publishing.

**References**

1. Digital Texturing and Painting: Owen, Demers, New riders publishing ISBN: 0-7357-0918-1

**Course Level Assessment**

**Questions Course Outcome 1 (CO1):**

1. Explain focal point and visual hierarchy.
2. Describe the visual principle that a design is weighted equally.

**Course Outcome 2 (CO2):**

1. Explain the various methods of abstraction.
2. How to design software applications for graphics.

**Course Outcome 3 (CO3):**

1. Explain color unity in terms of Tonality.
2. Explain the different methods of mixing and adding colors to the swatches panel.

**Course Outcome 4 (CO4):**

1. How to create, delete and apply swatches.
2. Explain type as an element of design summary.

**Course Outcome 5 (CO5):**

1. Explain the importance of graphic design in visual communication.
2. Explain the different design communication products.

**Course Outcome 6 (CO6):**

1. Consider a technical fest in your institution. Design a poster using photoshop, based on the theme 'Technology in society'.

**Model Question Paper**

**QP CODE:**

**Reg No:** \_\_\_\_\_

**Name:** \_\_\_\_\_

**PAGES: 4**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**SIXTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: CXT 352**

**Course Name: Visual Design and Communication**

**Max. Marks :100**

**Duration: 3 Hrs.**

**PART A**

**(Answer all Questions. Each question carries 3 Marks)**

1. Explain the concept behind focal point and visual hierarchy.
2. Explain any three basic elements of design.
3. Write a short note on Repetition using shape with example.
4. What do you mean by comps?
5. Explain the software applications for graphics.
6. Briefly describe the idea of abstraction.
7. Mention the impact of Bezier curves on visual design.
8. Explain Typeface design in visual design.
9. Differentiate between transparency and translucency.
10. What are sublayers? Also explain changing the stacking order of groups in layers.

**Part B**

**(Answer any one question from each module. Each question carries 14 Marks)**

**Module I**

11. a. Distinguish between rectilinear and curvilinear shapes. (6)
- b. Elaborate various elements of design in detail. (8)

**OR**

12. a. Explain Gestalt theory. What is its relevance in visual design? (8)
- b. Describe various types of rhythm with examples. (6)

**Module II**

COMPUTER SCIENCE AND DESIGN

13. a. Explain the steps in the conceptual process in design of a project. (8)  
b. Briefly illustrate the computer applications used in design. (6)

**OR**

14. a. Differentiate between bitmap graphics and vector graphics. (7)  
b. Explain the simplification method of abstraction. (7)

**Module III**

15. Narrate the background in color theory. (14)

**OR**

16. a. Write short notes on color unity via Tonality. (6)  
b. Describe mixing and adding colors to the swatches panel. (8)

**Module IV**

17. Explain Historic classification of type and Type styles. (14)

**OR**

18. Describe Visual and information Hierarchy. (14)

**Module V**

- 19.a. Distinguish Visual communication and Visual design. (8)  
b. Explain the need for design in visual communication. (6)

**OR**

20. Briefly describe: a) Graphic design.  
b) Design products in visual communication. (14)

**(5 x 14 = 70)**

**Preamble:**

This course helps the learner to understand the basic understanding of the parallel architecture and its operations and key features of high-performance computers. This course covers different parallel computer models, analyze the advanced processor technologies, compare different multiprocessor system interconnecting mechanisms, interpret the mechanisms for enforcing cache coherence, analyze different message passing mechanisms, analyze different pipelining techniques and appraise concepts of multithreaded architectures.

**Prerequisite:** Computer Organization and Architecture

**Course Outcomes:** After the completion of the course the student will be able to

| CO# | Course Outcomes  |
|-----|--|
| CO1 | Apply the basic concepts of various computer architectures, Amdahl's law for a fixed workload for evaluating the system performance.<br>(Cognitive Knowledge Level: Apply) |
| CO2 | Explain the concepts of various advanced processor technologies and conditions of parallelism.<br>(Cognitive Knowledge Level: Apply)                                       |
| CO3 | Summarize different multiprocessor system interconnecting mechanisms and cache coherence mechanisms.<br>(Cognitive Knowledge Level: Understand)                            |
| CO4 | Articulate various message passing mechanisms and multithreaded architectures.<br>(Cognitive Knowledge Level: Understand)  |
| CO5 | Apply the concepts of pipelining and pipeline design techniques to solve various problems.<br>(Cognitive Knowledge Level: Apply)   |

| Continuous Assessment Assignment                            | <b>15 marks</b> |

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 full questions from each module of which students should answer any one. Each question can have a maximum 2 sub-divisions and carries 14 marks.

## Syllabus

### Module – 1 (Parallel Computer Models)

Parallel computer models – Evolution of Computer Architecture, System Attributes to performance, Amdahl's law for a fixed workload. Multiprocessors and Multicomputers, Multivector and SIMD computers.

### Module - 2 (Advanced Processor Technologies)

Advanced Processor Technologies – Design Space of processors, Instruction Set Architectures, CISC Scalar Processors, RISC Scalar Processors, Superscalar and Vector processors, Conditions of parallelism.

### Module - 3 (Multiprocessors System Interconnects, Cache Coherence Mechanisms)

Multiprocessors System Interconnects - Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining networks. Cache Coherence Mechanisms, Cache Coherence Problem, Snoopy Bus Protocols.

### Module - 4 (Message Passing Mechanisms and Multithreaded Architectures)

Message Passing Mechanisms - Message Routing schemes, Flow control Strategies, Dimension order routing. Multithreaded Architectures - Principles of multithreading, Multithreading Issues and Solutions, Multiple context processors.

### Module - 5 (Pipelining Techniques and Pipeline Design)

Pipelining Techniques - Linear Pipeline processors and Nonlinear pipeline processors. Pipeline Design - Instruction pipeline design - Arithmetic pipeline design.

6. P V S Rao, Computer System Architecture, PHI, 2009.

**Course Level Assessment Questions****Course Outcome 1 (CO1):**

1. A 400MHz processor was used to execute a program with 150000 floating point instructions with clock cycle count of 1. Determine the execution time and MIPS rate for this program.
2. A generalized multiprocessor system architecture combines features from the UMA, NUMA and COMA models. Justify the answer.

**Course Outcome 2 (CO2):**

1. Compare vector and super scalar processors.
2. Analyze the data dependences among the following statements and construct a dependency graph. Also detect the parallelism embedded in them.

S1 : Load R1, M(100) /  $R1 \leftarrow \text{Memory}(100)$  /  
 S2 : Move R2, R1 /  $R2 \leftarrow (R1)$  /  
 S3 : Inc R1 /  $R1 \leftarrow (R1) + 1$  /  
 S4 : Add R2, R1 /  $R2 \leftarrow (R2) + (R1)$  /  
 S5 : Store M(100), R1 /  $\text{Memory}(100) \leftarrow (R1)$  /

**Course Outcome 3 (CO3):**

1. Explain the three major operational characteristics of a multiprocessor interconnection network.
2. Differentiate write-invalidate and write-update coherence protocols for write through caches.

**Course Outcome 4 (CO4):**

1. Explain what are the various Message Routing schemes.
2. Explain what is a multithreaded architecture and also its principles.

**Course Outcome 5 (CO5):**

1. How Carry Save Adder (CSA) and Carry Propagate Adder (CPA) can be used in a fixed-point multiplication pipeline unit?
2. Compare linear and nonlinear pipelining processors.

**Model Question Paper**

**QP CODE:**

**PAGES: 3**

**Reg No:** \_\_\_\_\_

**Name:** \_\_\_\_\_

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**SIXTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: CXT 362**

**Course Name: COMPUTER ARCHITECTURE**

**Max. Marks :100**

**Duration: 3 Hrs.**

**PART A**

**(Answer all Questions. Each question carries 3 Marks)**

1. Explain the concept of Implicit parallelism.
2. State Amdahl's law. Suppose that we want to enhance the processor used for a server machine. The new processor is 15 times faster on computation in serving the applications than the original processor. Assuming the original processor is busy with computation 30% and waiting for I/O 70% time, what is the overall speedup gained by incorporating the enhancement?
3. Distinguish between scalar RISC and super-scalar RISC in terms of instruction issue, pipeline architecture and performance.
4. Explain Bernstein's conditions for checking parallelism among a set of processes.
5. How does cache inconsistency occur in caches due to sharing writable data and process migration?
6. Describe a generalized multiprocessor system with a neat diagram.
7. Explain the various processor states in multiple context processors.
8. Explain different flow control strategies for resolving a collision between two packets.
9. What is dynamic instruction scheduling?
10. Explain internal data forwarding in pipelining.

**Part B**

**(Answer any one question from each module. Each question carries 14 Marks)**

- 11 a. A 400MHz processor was used to execute a program with 150000 floating point instructions with clock cycle count of 1. Determine the execution time, CPI and MIPS rate for this program. (6)
- b. Explain the two different models of the NUMA multiprocessor system. (8)

OR

- 12 a. Consider 2 programs A & B that solves a given problem. A is scheduled to run on a processor P1 operating at 1 GHz and B is scheduled to run on processor P2 running at 1.4 GHz. A has a total of 10000 instructions out of that 20% are branch instructions, 40% load and store and rest are ALU instructions. B is composed of 25% branch instructions. The number of load and store instructions in B is twice the count of ALU instructions. Total instruction count of B is 12000. In both P1 and P2 branch instructions have an average CPI of 5 and ALU instructions have an average CPI of 1.5. Both architectures differ in CPI for the load and store instructions, that is 2 for P1 and 3 for P2. Find out which mapping solves (A on P1 or B on P2) the problem faster and how much? (5)
- b. Explain Flynn's classification of computer architecture with examples and diagrams. (9)

- 13 a. Consider the execution of the following code segment consisting of seven statements. Use Bernstein's conditions to detect the maximum parallelism embedded in this code. Justify the portions that can be executed in parallel and the remaining portions that must be executed sequentially. Rewrite the code using parallel constructs such as Cobegin and Coend. No variable substitution is allowed. All the statements can be executed in parallel if they are declared within the same block of a (Cobegin and Coend) pair.

S1:  $A=B+C$

S2:  $C=D+E$

S3:  $F=G+E$

S4:  $C=A+F$

S5:  $M=G+C$

S6:  $A=L+E$

S7:  $A=E+A$

(6)

- b. With a neat diagram, explain about superscalar architecture. (8)

OR

- 14 a. Discuss pipelining in scalar, superscalar and vector processors with diagrams. (8)
- b. Define the following terms and give examples: -
- i) Flow dependence    ii) Anti dependence    iii) Output dependence (6)

- 15 a. Explain various snoopy bus protocols with examples and diagram. (9)  
 b. Explain the different levels of Hierarchical bus systems. (5)

OR

- 16 a. i. Draw a 16 input Omega network using 2x2 switches as building blocks.  
 ii. Show the switch settings for routing a message from node 1011 to node 0101 and from node 0111 to node 1001 simultaneously. Does blocking exist in this case? (7)  
 b. With a neat sketch discuss on multiport memory. (7)
- 17 a. Explain the different context switching policies adopted by multithreaded architectures. (8)  
 b. Explain E-cube routing algorithm. Consider a 16-node hypercube network and show how to route a message from node (0111) to node (1101) using E-cube routing algorithm. All the intermediate nodes must be identified on the routing path. (6)

OR

- 18 a. Explain Multithreading issues and solutions. (6)  
 b. Discuss store and forward and wormhole routing schemes. Analyze and compare the communication latencies. (8)
- 19 a. Consider the following reservation table for a four-stage pipeline with a clock cycle  $T_c=20\text{ns}$ .

|    | 1 | 2 | 3 | 4 | 5 | 6 |
|----|---|---|---|---|---|---|
| S1 | x |   |   |   |   | x |
| S2 |   | x |   | x |   |   |
| S3 |   |   | x |   |   |   |
| S4 |   |   |   | x | x |   |

- i. What are the forbidden latencies and the initial collision vector?  
 ii. Draw the state transition diagram for scheduling the pipeline.  
 iii. Determine the MAL associated with the shortest greedy cycle.  
 iv. Determine the pipeline throughput corresponding to the MAL and given  $T_c$ . (7)
- b. Explain Arithmetic pipeline design with an example. (7)

OR

- 20 a. Explain in detail the effect of branching and various branch handling strategies. (9)  
 b. Explain the score boarding scheme employed by the CDC 6600 processor. (5)

### Teaching Plan

| No  | Contents  | No of<br>Lecture<br>Hrs.: 35 |
|---|---|------------------------------|
| <b>Module – 1 (Parallel Computer Models) (7 hrs.)</b>   |   |                              |
| 1.1   | Parallel computer models - Evolution of Computer Architecture   | 1                            |
| 1.2   | System Attributes to performance                                | 1                            |
| 1.3   | System Attributes to performance                                | 1                            |
| 1.4   | Amdahl's law for a fixed workload                               | 1                            |
| 1.5   | Amdahl's law for a fixed workload                               | 1                            |
| 1.6   | Multiprocessors and Multicomputers                              | 1                            |
| 1.7   | Multivector and SIMD computers                                  | 1                            |
| <b>Module – 2 (Advanced Processor Technologies) (7 hrs.)</b>                                  |   |                              |
| 2.1   | Advanced Processor Technologies - Design Space of processors    | 1                            |
| 2.2   | Instruction Set Architectures - CISC Scalar Processors          | 1                            |
| 2.3   | RISC Scalar Processors  | 1                            |
| 2.4   | Superscalar processors  | 1                            |
| 2.5   | Vector processors   | 1                            |
| 2.6   | Conditions of parallelism                                       | 1                            |
| 2.7   | Conditions of parallelism                                       | 1                            |
| <b>Module – 3 (Multiprocessors System Interconnects, Cache Coherence Mechanisms) (7 hrs.)</b> |   |                              |
| 3.1   | Multiprocessors system interconnects - Hierarchical bus systems | 1                            |
| 3.2   | Crossbar switch and multiport memory                            | 1                            |
| 3.3   | Multistage and combining networks                               | 1                            |
| 3.4   | Multistage and combining networks                               | 1                            |
| 3.5   | Cache Coherence Mechanisms- Cache Coherence Problem             | 1                            |
| 3.6   | Snoopy Bus Protocols  | 1                            |
| 3.7   | Snoopy Bus Protocols  | 1                            |

| <b>Module - 4 (Message Passing Mechanisms and Multithreaded Architectures) (7 hrs.)</b> |  |   |
|---|--|---|
| 4.1   | Message Passing Mechanisms - Message Routing schemes | 1 |
| 4.2   | Flow control Strategies                              | 1 |
| 4.3   | Dimension order routing                              | 1 |
| 4.4   | Multithreaded architectures                          | 1 |
| 4.5   | Principles of Multithreading                         | 1 |
| 4.6   | Multithreading Issues and Solutions                  | 1 |
| 4.7   | Multiple context processors                          | 1 |
| <b>Module - 5 (Pipelining Techniques and Pipeline Design) (7 hrs.)</b>                  |  |   |
| 5.1   | Pipelining techniques                                | 1 |
| 5.2   | Linear pipeline processors                           | 1 |
| 5.3   | Nonlinear pipeline processors                        | 1 |
| 5.4   | Nonlinear pipeline processors                        | 1 |
| 5.5   | Pipeline Design                                      | 1 |
| 5.6   | Instruction pipeline design                          | 1 |
| 5.7   | Arithmetic pipeline design                           | 1 |

|         |                              |          |   |   |   |        |                         |

**Preamble:**

The objective of this Course work is to ensure the comprehensive knowledge of each student in the most fundamental core courses in the curriculum. Five core courses credited from Semesters 3, 4 and 5 are chosen for the detailed study in this course work. This course helps the learner to become competent in cracking GATE, placement tests and other competitive examinations

**Prerequisite:**

1. Data Structures
2. Operating Systems
3. Computer Organization and Architecture
4. Web Programming
5. Virtual Reality

**Course Outcomes:** After the completion of the course the student will be able to

|       |   |
|-------|---|
| CO1   | Comprehend the concepts and applications of data structures (Cognitive Knowledge Level: <b>Understand</b> )           |
| CO2 : | Comprehend the concepts, functions and algorithms in Operating System (Cognitive Knowledge Level: <b>Understand</b> ) |
| CO3:  | Comprehend the organization and architecture of computer systems (Cognitive Knowledge Level: <b>Understand</b> )      |
| CO4:  | Comprehend the fundamental principles of Web Programming (Cognitive Knowledge Level: <b>Understand</b> )              |
| CO5:  | Comprehend the concepts in Virtual Reality (Cognitive Knowledge Level: <b>Understand</b> )                            |

**Mapping of course outcomes with program outcomes**

|     | PO1                                 | PO2                                 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12                                |
|-----|-------------------------------------|-------------------------------------|-----|-----|-----|-----|-----|-----|-----|------|------|-------------------------------------|
| CO1 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |     |     |     |     |     |     |     |      |      | <input checked="" type="checkbox"/> |
| CO2 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |     |     |     |     |     |     |     |      |      | <input checked="" type="checkbox"/> |
| CO3 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |     |     |     |     |     |     |     |      |      | <input checked="" type="checkbox"/> |
| CO4 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |     |     |     |     |     |     |     |      |      | <input checked="" type="checkbox"/> |
| CO5 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |     |     |     |     |     |     |     |      |      | <input checked="" type="checkbox"/> |

**Assessment Pattern**

| Bloom's Category | End Semester Examination |
|------------------|--------------------------|
| Remember         | 10                       |
| Understand       | 20                       |
| Apply            | 20                       |
| Analyze          |                          |
| Evaluate         |                          |
| Create           |                          |

**Mark distribution**

| Total Marks | CIE | ESE | ESE Duration |
|-------------|-----|-----|--------------|
| 50          | 0   | 50  | 1 hour       |

**End Semester Examination Pattern:** Objective Questions with multiple choice (Four). Question paper include fifty questions of one mark each covering the five identified courses.

## Syllabus

Full Syllabus of all five selected courses.

1. **Data Structures**
2. **Operating Systems**
3. **Computer Organization and Architecture**
4. **Web Programming**
5. **Virtual Reality**

### Course Contents and Lecture Schedule

| No       | Topic   | No. of Lectures (12) |
|----------|---|----------------------|
| <b>1</b> | <b>DATA STRUCTURES</b>                        |                      |
| 1.1      | Mock Test on Module 1, Module 2 and Module 3  | 1 hour               |
| 1.2      | Mock Test on Module 4 and Module 5            | 1 hour               |
| <b>2</b> | <b>OPERATING SYSTEMS</b>                      |                      |
| 2.1      | Mock Test on Module 1 and Module 2            | 1 hour               |
| 2.2      | Mock Test on Module 3, Module 4 and Module 5  | 1 hour               |
| 2.3      | Feedback and Remedial                         | 1 hour               |
| <b>3</b> | <b>COMPUTER ORGANIZATION AND ARCHITECTURE</b> |                      |
| 3.1      | Mock Test on Module 1, Module 2 and Module 3  | 1 hour               |
| 3.2      | Mock Test on Module 4 and Module 5            | 1 hour               |
| <b>4</b> | <b>WEB PROGRAMMING</b>                        |                      |

|     |  |        |
|-----|--|--------|
| 4.1 | Mock Test on Module 1, Module 2 and Module 3 | 1 hour |
| 4.2 | Mock Test on Module 4 and Module 5           | 1 hour |
| 5   | <b>VIRTUAL REALITY</b>                       |        |
| 5.1 | Mock Test on Module 1, Module 2 and Module 3 | 1 hour |
| 5.2 | Mock Test on Module 4 and Module 5           | 1 hour |
| 5.3 | Feedback and Remedial                        | 1 hour |

**Model Question Paper****QP CODE:****Reg No:** \_\_\_\_\_**Name:** \_\_\_\_\_**PAGES: 10**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**  
**SIXTH SEMESTER B. TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: CXT 308**

**Course Name: Comprehensive Course Work**

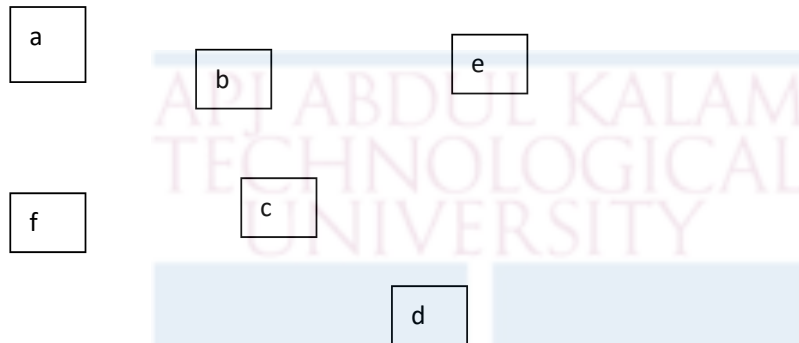

**Max. Marks: 50****Duration: 1 Hour**

**Objective type questions with multiple choices. Mark one correct answer for each question.**  
**Each Question Carries 1 Mark**

- Consider the following sequence of operations on an empty stack.  
push(22); push(43); pop(); push(55); push(12); s=pop();  
Consider the following sequence of operations on an empty queue.  
enqueue(32); enqueue(27); dequeue(); enqueue(38); enqueue(12); q=dequeue();  
The value of s+q is \_\_\_\_\_  
(A) 44 (B) 54 (C) 39 (D) 70
- The following postfix expression with single digit operands is evaluated using a stack:  
 $8\ 2\ 2\ ^\ / 4\ 3\ * + 5\ 1\ * -$   
Note that ^ is the exponentiation operator. The top two elements of the stack after the first \* is evaluated are:  
(A) 12,2 (B) 12,5 (C) 2,12 (D) 2,5
- Construct a binary search tree by inserting 8, 6, 12, 3, 10, 9 one after another. To make the resulting tree as AVL tree which of the following is required?  
(A) One right rotation only  
(B) One left rotation followed by two right rotations  
(C) One left rotation and one right rotation  
(D) The resulting tree itself is AVL
- In a complete 4-ary tree, every internal node has exactly 4 children or no child. The number of leaves in such a tree with 6 internal nodes is:  
(A) 20 (B) 18 (C) 19 (D) 17

5. Consider the following graph with the following sequences

- I. a b c f d e
- II. a b e d f c
- III. a b f c d e
- IV. a f c b e d

Which is Depth First Traversals of the above graph?

- (A) I, II and IV only    (B) I and IV only
  - (C) II, III and IV only    (D) I, III and IV only
6. Consider a hash table of size seven, with starting index zero, and a hash function  $(2x + 5) \text{ mod } 7$ . Assuming the hash table is initially empty, which of the following is the contents of the table when the sequence 1, 4, 9, 6 is inserted into the table using closed hashing? Note that ‘\_’ denotes an empty location in the table.
- (A) 9, \_, 1, 6, \_, \_, 4                      (B) 1, \_, 6, 9, \_, \_, 4
  - (C) 4, \_, 9, 6, \_, \_, 1                      (D) 1, \_, 9, 6, \_, \_, 4
7. Consider the following C program where `TreeNode` represents a node in a binary tree

```

struct TreeNode{
    struct TreeNode *leftChild;
    struct TreeNode *rightChild;
    int element;
};
int CountNodes(struct TreeNode *t)
{
    if((t==NULL)||((t->leftChild==NULL) && (t->rightChild==NULL)))
        return 0;
    else
    {
        return 1+CountNodes(t->leftChild)+CountNodes(t->rightChild)
    }
}
    
```

The value returned by CountNodes when a pointer to the root of a binary tree is passed as its argument is

- (A) number of nodes
- (B) number of leaf nodes
- (C) number of non-leaf nodes
- (D) number of leaf nodes-number of non-leaf nodes

8. How many distinct binary search trees can be created out of 6 distinct keys?  
 (A) 7            (B) 36            (C) 140            (D) 132
9. Suppose a disk has 400 cylinders, numbered from 0 to 399. At some time, the disk arm is at cylinder 58, and there is a queue of disk access requests for cylinder 66, 349, 201, 110, 38, 84, 226, 70, 86. If Shortest-Seek Time First (SSTF) is being used for scheduling the disk access, the request for cylinder 86 is serviced after servicing \_\_\_\_\_ number of requests.  
 (A) 1                            (B) 2                            (C) 3                            (D) 4
10. If frame size is 4KB then a paging system with page table entry of 2 bytes can address \_\_\_\_\_ bytes of physical memory.  
 (A)  $2^{12}$                             (B)  $2^{16}$                             (C)  $2^{18}$                             (D)  $2^{28}$
11. Calculate the internal fragmentation if page size is 4KB and process size is 103KB.  
 (A) 3KB            (B) 4KB            (C) 1KB            (D) 2KB
12. Which of the following scheduling policy is likely to improve interactivensess?  
 (A) FCFS                            (B) Round Robin  
 (C) Shortest Process Next            (D) Priority Based Scheduling
13. Consider the following program
- ```

Semaphore X=1, Y=0
Void A ( )
{
    While (1)
    {
        P(X);
        Print'1';
        V(Y);
    }
}

Void B ( )
{
    While (1)
    {
        P(Y);
        P(X);
        Print'0';
        V(X);
    }
}
  
```

The possible output of the program:

- (A) Any number of 0's followed by any number of 1's.  
 (B) Any number of 1's followed by any number of 0's.  
 (C) 0 followed by deadlock  
 (D) 1 followed by deadlock
14. In a system using single processor, a new process arrives at the rate of 12 processes per minute and each such process requires 5 seconds of service time. What is the percentage of CPU utilization?  
 (A) 41.66 (B) 100.00 (C) 240.00 (D) 60.00
15. A system has two processes and three identical resources. Each process needs a maximum of two resources. This could cause  
 (A) Deadlock is possible (B) Deadlock is not possible  
 (C) Starvation may be present (D) Thrashing
16. Which of the following is true with regard to Round Robin scheduling technique?  
 (A) Responds poorly to short process with small time quantum.  
 (B) Works like SJF for larger time quantum  
 (C) Does not use a prior knowledge of burst times of processes.  
 (D) Ensure that the ready queue is always of the same size.
17. The size of the physical address space of a 32-bit processor is  $2^W$  words. The capacity of cache memory is  $2^N$  words. The size of each cache block is  $2^K$  words. For a M-way set-associative cache memory, the length (in number of bits) of the tag field is  
 (A)  $W - N + \log_2 M$  (B)  $W - N - \log_2 M$   
 (C)  $W - N - K - \log_2 M$  (D)  $W - N - K + \log_2 M$
18. A 64-bit processor can support a maximum memory of 8 GB, where the memory is word-addressable (one word is of 64 bits). The size of the address bus of the processor is at least \_\_\_\_\_ bits.  
 (A) 30 (B) 31 (C) 32 (D) None
19. The stage delays in a 4-stage pipeline are 900, 450, 400 and 350 picoseconds. The first stage (with delay 900 picoseconds) is replaced with a functionally equivalent design involving two stages with respective delays 600 and 550 picoseconds. The throughput increase of the pipeline is \_\_\_\_\_ percent.  
 (A) 38 (B) 30 (C) 58 (D) 50
20. Consider a direct mapped cache of size 256 Kilo words with block size 512 words. There are 6 bits in the tag. The number of bits in block (index) and word (offset) fields of physical address are is:  
 (A) block (index) field = 6 bits, word (offset) field = 9 bits

- (B) block (index) field = 7 bits, word (offset) field = 8 bits
- (C) block (index) field = 9 bits, word (offset) field = 9 bits
- (D) block (index) field = 8 bits, word (offset) field = 8 bits

21. The memory unit of a computer has 1 Giga words of 64 bits each. The computer has instruction format, with 4 fields: an opcode field; a mode field to specify one of 12 addressing modes; a register address field to specify one of 48 registers; and a memory address field. If an instruction is 64 bits long, how large is the opcode field?

- (A) 34 bits
- (B) 24 bits
- (C) 20 bits
- (D) 14 bits

22. A computer has 64-bit instructions and 28-bit address. Suppose there are 252 two-address instructions. How many 1-address instructions can be formulated?

- (A)  $2^{24}$
- (B)  $2^{26}$
- (C)  $2^{28}$
- (D)  $2^{30}$

23. Determine the number of clock cycles required to process 200 tasks in a six-segment pipeline. (Assume there were no stalls), each segment takes 1 cycle.

- (A) 1200 cycles
- (B) 206 cycles
- (C) 207 cycles
- (D) 205 cycles

24. Match the following Lists:

- |                          |                               |
|--------------------------|-------------------------------|
| P. DMA                   | 1. Priority Interrupt         |
| Q. Processor status Word | 2. I/O Transfer               |
| R. Daisy chaining        | 3. CPU                        |
| S. Handshaking           | 4. Asynchronous Data Transfer |
- (A) P-1, Q-3, R-4, S-2
  - (B) P-2, Q-3, R-1, S-4
  - (C) P-2, Q-1, R-3, S-4
  - (D) P-4, Q-3, R-1, S-2

25. What is the preferred way for adding a background color in HTML?

- a.) `<body background="yellow">`
- b.) `<background>yellow</background>`
- c.) `< body style="background-color:yellow">`
- d.) `<background color="yellow">text<background>`

26. Which of the following JavaScript cannot do?

- a.) JavaScript can react to events
- b.) JavaScript can manipulate HTML elements
- c.) JavaScript can be used to validate data
- d.) All of the Above

27. How can you make a list that lists the items with numbers?

- a.) `<ul>`

- b.) <list>
- c.) <ol>
- d.) <dl>

28. The latest HTML standard is

- a) XML
- b) HTML 4.0
- c) HTML 5.0
- d) HTML 6.0

29. Elements between and tags of HTML tables are ..... by default

- a) left aligned
- b) justified
- c) Center aligned
- d) right aligned

30. How do we write comments in HTML?

- a) </ ..... >
- b) <!.....>
- c) </...../>
- d) <.....!>

31. Why were cookies designed?

- a) for server-side programming
- b) for client-side programming
- c) both a and b
- d) none

32. What are the types of lists available in HTML?

- a) Ordered, Unordered lists
- b) Bulleted, numbered lists
- c) None
- d) Named, Unnamed lists

33. typeof “null” in JavaScript is \_\_\_\_\_
- a) number
  - b) string
  - c) object
  - d) undefined
34. Which method is not used for converting variables to number?
- a) parseInt()
  - b) Number()
  - c) parseFloat()
  - d) valueOf()
35. HMD stands for?
- A) Head Made Display
  - B) Head Mounted Display
  - C) Head Masked Display
  - D) Head Mounted Detection
36. An example of non-immersive VR device is
- A) An iPad
  - B) An IMAX
  - C) A Screen Projection
  - D) A Virtual Reality Headset
37. What is one potential limitation of VR?
- A. It can be isolating for the user
  - B. It can be expensive to set up and maintain
  - C. It requires a high level of technical knowledge to use
  - D. All of the above
38. Virtual reality provides
- A. Sharp pictures
  - B. Individual audio
  - C. Preview of new films
  - D. Participatory experience

39. Which country government introduced the Industry 4.0 concept?
- Germany
  - United States of America
  - France
  - Great Britain
40. \_\_\_\_\_ keep track of position.
- Motion analyzers
  - Motion Trackers
  - HMD
  - SMD
41. How can we describe an array in the best possible way?
- The Array shows a hierarchical structure.
  - Arrays are immutable.
  - Container that stores the elements of similar types
  - The Array is not a data structure
42. Which data structure is mainly used for implementing the recursive algorithm?
- Queue
  - Stack
  - Binary tree
  - Linked list
43. What is a batch operating system?
- Multiple individual tasks
  - Similar types of tasks are grouped together
  - Tasks operating at different systems
  - All of the above
44. Which one of the following isn't considered a real-time operating system?
- PSOS
  - linuxRT
  - VRTX
  - Windows
45. With the help of \_\_\_\_\_ we reduce the memory access time:
- SDRAM
  - Cache
  - Heaps
  - Higher capacity RAMs
46. What is used to increase the apparent size of physical memory?
- Disks
  - Hard-disk
  - Virtual memory

D. Secondary memory

47. Which of these memories would have the lowest access time in a system:

a. Main Memory

b. Magnetic Disk

c. Registers

e. Cache

48. In the Principle of locality, there is a justification of the use of:

a. DMA

b. Cache memory

c. Disk

d. Interrupts

49. Quick sort is also known as .....

A. insertion sort

B. tree sort

C. shell sort

D. partition and exchange sort

50. To represent hierarchical relationship between elements, which data structure is suitable?

A) Circular queue

B) Priority

C) Tree

D) Graph

|------------|----------|----------|---|---|---|--------|----------------------|
|            |          | PCC      | 0 | 0 | 3 | 2      | 2021                 |

**Preamble:** Lab is aimed to provide hands-on experience with various aspects of Software Engineering and UML including requirements identification, DFD, behavioral and structural design using UML diagrams, implementation, and so on.

**Prerequisite:** Basic understanding of Computer Programming, Object Oriented Modelling and Design.

**Course Outcomes:** After the completion of the course the student will be able to

|            |                                                                                                                                                                                                |

### Assessment Pattern

| Bloom's Category | Continuous Assessment Test (Internal Exam)<br><i>Percentage</i> | End Semester Examination<br><i>Percentage</i> |
|------------------|-----------------------------------------------------------------|-----------------------------------------------|
| Remember         | 20                                                              | 20                                            |
| Understand       | 20                                                              | 20                                            |
| Apply            | 60                                                              | 60                                            |
| Analyse          |                                                                 |                                               |
| Evaluate         |                                                                 |                                               |
| Create           |                                                                 |                                               |

### Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 75        | 75        | 3 hours      |

**Continuous Internal Evaluation Pattern:**

|                              |            |
|------------------------------|------------|
| Attendance                   | : 15 marks |
| Continuous Evaluation in Lab | : 30 marks |
| Continuous Assessment Test   | : 15 marks |
| Viva-voce                    | : 15 marks |

**Internal Examination Pattern:** The marks will be distributed as Algorithm 30 marks, Program 20 marks, Output 20 marks and Viva 30 marks. Total 100 marks which will be converted out of 15 while calculating Internal Evaluation marks.

**End Semester Examination Pattern:** The marks will be distributed as Algorithm 30 marks, Program 20 marks, Output 20 marks and Viva 30 marks. Total 100 marks will be converted out of 75 for End Semester Examination.

**Fair Lab Record:**

All Students attending the Computer Aided Software Engineering Lab should have a Fair Record. The fair record should be produced in the University Lab Examination. Every experiment conducted in the lab should be noted in the fair record. For every experiment in the fair record the right-hand page should contain Experiment Heading, Experiment Number, Date of Experiment, Aim of Experiment, Details of Experiment including algorithm and Result of Experiment. The left-hand page should contain a printout of the code used for the experiment and sample output obtained for a set of input.

**Syllabus**

1. Familiarization of System Requirement Specification (SRS) and related analysis documents as per the IEEE standards.
2. Demonstration of UML Tools.
3. Creation of design documents representing the complete design of the software system.
4. Application of COCOMO and Function Point (FP) model for the actual project that has been chosen.
5. Familiarization of CASE workbenches.

For university examinations students can use the references of the library. Questions should be created in such a way that it explores the students' understanding of the concept.

**Operating system to use in lab:** Linux

**Software to use in lab:** Any Open-Source Software (e.g.: LaTeX, PlantUML, etc.,)

## PRACTICE QUESTIONS

List of Exercises/Experiments:

For any given case/ problem statement do the following:

1. Design an SRS document in line with the IEEE recommended standards.
2. Draw the use case diagram and specify the role of each of the actors. Also state the precondition, post condition and function of each use case.
3. Draw the activity diagram.
4. Identify the classes. Classify them as weak and strong classes and draw the class diagram.
5. Draw the sequence diagram for any two scenarios.
6. Design and Draw the collaboration diagram.
7. Design and Draw the state chart diagram.
8. Draw the component diagram.
9. Demonstrate forward engineering in java. (Model to code conversion)
10. Demonstrate reverse engineering in java. (Code to Model conversion)
11. Develop and draw the deployment diagram.
12. Develop programme/Tool to calculate effort and cost estimation using COCOMO model.

*Note: Students can be given a group micro project, so that they learn to work in a team environment. They can also be trained on project management tools.*

**Preamble:**

The objective of this course is to apply the fundamental concepts of Computer Science and Engineering/Design principles for the effective development of an application/research project. This course helps the learners to practice the different steps to be followed in the software development process such as literature review and problem identification, preparation of Software Requirement Specification & Software Design Document (SDD), testing, development and deployment. Mini project enables the students to boost their skills, widen the horizon of thinking and their ability to resolve-real life problems.

**Pre-requisite:**

A sound knowledge in any programming language and fundamental concepts of Software Engineering.

**Course Outcomes:** After the completion of the course the student will be able to

| CO# | CO                                                                                                                                                                                                                               |

**Assessment Pattern**

**Mark Distribution**

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 75        | 75        |              |

**Continuous Internal Evaluation Pattern:**

|                |          |
|----------------|----------|
| Attendance     | 10 marks |
| Project Guide  | 15 marks |
| Project Report | 10 marks |

Evaluation by the Committee (will be evaluating the level of completion and demonstration of functionality/specifications, presentation, oral examination, work knowledge and involvement): **40 marks**

Student Groups with 3 or 4 members should identify a topic of interest in consultation with a Faculty/Advisor. Review the literature and gather information pertaining to the chosen topic. State the objectives and develop a methodology to achieve the objectives. Carryout the design/fabrication or develop codes/programs to achieve the objectives by strictly following steps specified in the teaching plan. Innovative design concepts, performance, scalability, reliability considerations, aesthetics/ergonomic, user experience and security aspects taken care of in the project shall be given due weight.

The progress of the mini project is evaluated based on a minimum of two reviews. The review committee may be constituted by the Head of the Department comprising HoD or a senior faculty member, Mini Project coordinator and project guide. The internal evaluation shall be made based on the progress/outcome of the project, reports and a viva-voce examination, conducted internally by a 3-member committee. A project report is required at the end of the semester. The project has to be demonstrated for its full design specifications.

#### **End Semester Examination Pattern:**

The marks will be distributed as

|               |                    |
|---------------|--------------------|
| Presentation: | <b>30 marks</b>    |
| Demo          | <b>: 20 marks</b>  |
| Viva          | <b>: 25 marks.</b> |
| Total         | <b>: 75 marks.</b> |

**TEACHING PLAN**

Students are expected to follow the following steps.

1. Review of Literature and Identification of a problem
2. Create an abstract with a problem statement, solution approach, technology stack, team, etc. and get department approval. Register Online course/ Collect study materials.
3. Create Software Requirements Specification (SRS Document)
4. Create Software Design Document (SDD). This may include designs like,
  - a. System Architecture Design
  - b. Application Architecture Design
  - c. GUI Design (Mockups)
  - d. API Design
  - e. Database Design
  - f. Technology Stack
5. Create Test Plan, Test Scenarios and Test Cases (Test Case Document) & Traceability Matrix
6. Create a Project Plan (with Modules, Tasks, Resources, Time schedule) [May use any project management tool for this] – Choose and follow agile or waterfall models.
7. Development
  - a. Set coding standards
  - b. Environment Setup
  - c. Source Code Control Setup (Like Subversion(SVN), Git)
  - d. Development
  - e. Unit Testing
  - f. Integration Testing
  - g. Testing /Quality Assurance(QA)
    - i. Functional Testing
    - ii. Load Testing
    - iii. Report Bugs
  - h. Resolve Bugs & Retest

8. Deployment (of software from local development environment to a production environment)
9. Test Run & Get Results
10. Prepare Project Report

### **Guidelines for the Report preparation**

A bonafide report on the mini project shall be submitted within one week after the final presentation. Minimum number of pages should be 40.

- Use Times New Roman font for the entire report – Chapter/Section Title – Times New Roman 18, Bold; Heading 2 – Times New Roman 16, Bold; Heading 3 – Times New Roman 14, Bold; Body- Times New Roman 12, Normal.
- Line Spacing – Between Heading 2 – 3 lines, between lines in paragraph 1.5 lines.
- Alignments – Chapter/Section Title – Center, Heading 2 & 3 should be Left Aligned. Ensure that all body text is paragraph justified.
- Figures & Tables – Ensure that all Figures and Tables are suitably numbered and given proper names/headings. Write figure title under the figure and table title above the table.
- **Suggestive order of documentation:**
  - i. Top Cover
  - ii. Title page
  - iii. Certification page
  - iv. Acknowledgement
  - v. Abstract
  - vi. Table of Contents
  - vii. List of Figures and Tables
  - viii. Chapters
  - ix. Appendices, if any
  - x. References/Bibliography

### Preamble:

This is a course in theoretical computer science that includes test cases for white-box, black-box, and grey-box approaches. This course describes the various techniques for test case design used to test software artifacts, including requirements, design, and code. The course includes different techniques for test case design based on graphs, programming language syntaxes and inputs. The course also covers symbolic execution using PEX tool.

**Course Outcomes:** After the completion of the course the student will be able to:-

|            |                                                                                                                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CO1</b> | List a range of different software testing techniques and be able to apply specific unit testing method to the projects using Junit. <b>(Cognitive Knowledge Level: Understand)</b>     |
| <b>CO2</b> | Explain mutation testing method for a given piece of code to identify hidden defects that can't be detected using other testing methods. <b>(Cognitive Knowledge Level: Understand)</b> |
| <b>CO3</b> | Explain graph coverage criteria in terms of control flow graph and data flow graph for a given program. <b>(Cognitive Knowledge Level: Understand)</b>                                  |
| <b>CO4</b> | Demonstrate the importance of black-box approaches in terms of domain and functional testing. <b>(Cognitive Knowledge Level: Understand)</b>                                            |
| <b>CO5</b> | Illustrate the use of PEX tool with symbolic execution. <b>(Cognitive Knowledge Level: Apply)</b>                                                                                       |

## COMPUTER SCIENCE AND DESIGN

### Mark Distribution

| <b>Total Marks</b> | <b>CIE Marks</b> | <b>ESE Marks</b> | <b>ESE Duration</b> |
|--------------------|------------------|------------------|---------------------|
| <b>150</b>         | <b>50</b>        | <b>100</b>       | <b>3 hours</b>      |

#### **Continuous Internal Evaluation Pattern:**

Attendance : **10 marks**

Continuous Assessment - Test : **25 marks**

Continuous Assessment - Assignment : **15 marks**

#### **Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. First series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

#### **End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 2 sub-divisions and carries 14 marks.

# COMPUTER SCIENCE AND DESIGN

## Syllabus

### Module - 1 (Introduction to Software Testing)

Some Popular Errors – Ariane 5, Therac 25, Intel Pentium Bug. What is Software testing? Why should it be tested? Software Quality, Role of Testing. Testing Process - Level 0 thinking, Level 1 thinking, Level 2 thinking, Level 3 thinking, Level 4 thinking. Software Testing Terminologies - Verification, Validation and Testing, Faults, Error and Bug, Test cases, Coverage Criteria. Types of Testing- Unit testing, integration testing, System testing, Acceptance testing, Beta testing, Functional testing, Stress testing, Performance testing, Usability testing and Regression testing. Testing Methods - Black Box testing, White Box testing, Grey Box testing.

### Module - 2 (Unit Testing)

Concept of Unit testing. Static Unit testing. Dynamic Unit testing - Control Flow testing, Data Flow testing, Domain testing, Functional Program testing. Mutation testing - Mutation and Mutants, Mutation operators, Mutation score. Junit - Framework for Unit testing. Case Study - Mutation testing using Junit and Muclipse.

### Module - 3 (Unit Testing - White Box Approaches)

Overview of Graph Coverage Criteria. Structural Graph Coverage Criteria - Node/vertex coverage, Edge coverage, Edge pair coverage, Path coverage, Complete path coverage, Prime path coverage, Complete round trip coverage, Simple round trip coverage. Data Flow Criteria - du paths, du pairs. Subsumption Relationships among Graph Coverage Criteria. Graph Coverage for Source Code - Control flow graphs for code, CFG: If statement, CFG: If statement with return, CFG: Switch-case, CFG: Loops, CFG: Exceptions (try-catch). Example program – Statistics. Graph Coverage for Design Elements - Call graphs and classes, Class inheritance testing: Coverage criteria, Coverage criteria on inheritance graph, Data flow at the design level, Inter-procedural DU pairs, Coupling du-pairs example. Example - Quadratic Root. Case Study - Graph Based testing using JUnit Framework.

### Module - 4 (Unit Testing - Black Box Approaches)

Domain Testing / Input Space Partitioning - Partitions of a set. Input domain modelling - Interface-based approach, Functionality-based approach. Identifying values. Multiple partitions of the inputdomain - All Combinations Coverage (ACoC), Each Choice Coverage (ECC), Pair-wise Coverage, T-wise Coverage, Base Choice Coverage, Multiple Base Choices Coverage. TriTyp example. Functional Testing - Functional Testing Concepts of Howden. Functional testing - Important Steps. Types of Functional testing - Equivalence Class Partitioning, Boundary Value Analysis, Decision Tables, Random Testing. Case Study - Black Box testing approaches using JUnit.

### Module - 5 (Grey Box Testing Approaches)

# COMPUTER SCIENCE AND DESIGN

Introduction to Grey Box testing - Why Grey Box testing, Gray Box Methodology, Advantages and Disadvantages. Techniques of Grey Box Testing - Matrix Testing, Regression Testing, Orthogonal Array Testing or OAT, Pattern Testing. An Introduction to PEX - Parameterized Unit Testing, The Testing Problem. Symbolic Execution – Example, Symbolic execution tree. PEX application Case Study – PEX.

## Text Books

1. Paul Ammann and Jeff Offutt, Introduction to Software Testing.
2. Kshirasagar Naik and Priyadarshi Tripathy, Software Testing And Quality Assurance: Theory And Practice.

## Reference Materials

1. <https://www.csc.ncsu.edu/academics/undergrad/honors/thesis/muclipsebinder.pdf> - Muclipse tutorial.
2. King, James C, “Symbolic Execution and Program Testing”, Association for Computing Machinery, July 1976.
- 3.

## Sample Course Level Assessment Questions

**Course Outcome 1 (CO1):** Explain the following types of testing methods with examples.

- (i) Black-box testing.
- (ii) White-box testing.
- (iii) Grey-box testing.

**Course Outcome 2 (CO2):** Define 12 mutants for the following method *power()* using effective mutation operators. Try to use each mutation operator at least once. Approximately, how many mutants do you think there would be, if all mutants for *power()* were created?

```
public static int power (int left, int right)
{
//*****
// Raises Left to the power of Right
// precondition : Right >= 0
// postcondition: Returns Left**Right
//*****
    intrslt;
    rslt = Left;
```

```

if(Right == 0)
{
    rslt = 1;
}
else
{
    for (int i = 2; i <= Right; i++)
        rslt = rslt * Left;
}
return (rslt);
}

```

**Course Outcome 3 (CO3):** Draw the control flow graph and data flow graph of given piece of code.

```

public static double ReturnAverage(int value[],int AS, int MIN, int MAX){
/*
Function: ReturnAverageComputes the averageof all those numbers in the input array in
the positive range [MIN, MAX]. The maximumsize of the array is AS. But, the array size
could be smaller than AS in which case the endof input is represented by -999.
*/
int i, ti, tv, sum;
doubleav;
i = 0; ti = 0; tv = 0; sum = 0;
while (ti< AS && value[i] != -999) {
ti++;
if (value[i] >= MIN && value[i] <= MAX) {
tv++;
sum = sum + value[i];
}
i++;
}
if (tv> 0)
av = (double)sum/tv;

```

```

else
av = (double) -999;
return (av);
}

```

**Course Outcome 4 (CO4):** Explain the following with examples.

1. Input domain modelling.
2. All Combinations Coverage (ACoC)
3. Each Choice Coverage (ECC)
4. Pair-wise Coverage
5. T-wise Coverage
6. Base Choice Coverage
7. Multiple Base Choices Coverage.

**Course Outcome 5 (CO5):** Draw the symbolic execution tree for the following program code and explain the symbolic execution of testme ( $\alpha_1$ ,  $\alpha_2$ ).

1. int twice (int v) {
2. return 2 \* v;
3. }
4. void testme (int x, int y) {
5. z = twice ( y);
6. if ( z == x ){
7. if ( x > y + 10)
8. ERROR;
9. }
10. }
11. int main() {
12. x = sym input();
13. y = sym input();
14. testme ( x , y);
15. return(0);
16. }

# COMPUTER SCIENCE AND DESIGN

## Model Question Paper

QP CODE:

PAGES: 4

Reg No: \_\_\_\_\_

Name : \_\_\_\_\_

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

SIXTH SEMESTER B.TECH DEGREE EXAMINATION(MINOR), MONTH & YEAR

Course Code: CST 382

Course Name: Introduction to Software Testing

Max.Marks:100

Duration: 3 Hours

### PART A

Answer all Questions. Each question carries 3 Marks

1. Explain the differences between Validation and Verification.
2. Explain the differences between Fault, Error, and Bug?
3. Define Ground string, Mutation score, and Mutants.
4. What are the functions of Test driver and Test stubs in dynamic unit testing?
5. Define Node coverage, Edge coverage and Prime path coverage in a control flow graph.
6. What are du paths and du pairs in a data flow graph?
7. Explain the two approaches in input domain modelling.
8. Explain the difference between Equivalence Class Partitioning and Boundary Value Analysis.
9. Briefly explain three techniques of Grey box testing.
10. Explain the concept of symbolic execution with the help of a toy example.

(10x3=30)

### Part B

(Answer any one question from each module. Each question carries 14 Marks)

11. (a) Explain the following types of testing  
(i) Black Box testing (ii) White Box testing (iii) Grey Box testing

(14)

## COMPUTER SCIENCE AND DESIGN

(iv) Unit testing (v) Integration testing (vi) System testing (vii) Acceptance testing

**OR**

12. (a) Explain the following coverage criterias based on the code fragment given below. (i) Functional coverage (ii) Statement coverage (iii) Conditional coverage (iv) Branch coverage **(8)**

```
int foo (int x, int y){  
    int z = 0;  
    if((x > 0) && (y > 0)){  
        z = x;}  
    return z;  
}
```

- (b) Write positive and negative test cases for an ATM Machine? **(6)**
13. (a) Explain Dynamic unit test environment with a neat figure. **(8)**
- (b) Explain the major difference between control flow testing and data flow testing. **(6)**

**OR**

14. Explain seven types of mutation operators with neat examples. **(14)**
15. (a) Explain touring, side trips and detours with a neat example. **(7)**
- (b) Explain simple path coverage and prime path coverage with the help of CFG given below. **(7)**

**OR**

16. (a) Draw CFG fragment for

## COMPUTER SCIENCE AND DESIGN

- (i) Simple *if* (ii) Simple *while* loop (iii) Simple *for* loop (7)
- (b) Explain the following concepts with examples. (7)
- (i) Call graph (ii) Inheritance graph (iii) Coupling du-pairs
17. (a) What are the four important steps in functional testing? (7)
- (b) Briefly explain input domain modelling approaches. (7)

**OR**

18. (a) Consider the triangle classification program with a specification: (6)
- The program reads floating values from the standard input. The three values  $A$ ,  $B$ , and  $C$  are interpreted as representing the lengths of the sides of triangle. The program then prints a message to the standard output that states whether the triangle, if it can be formed, is scalene, isosceles, equilateral, or right angled. Determine the following for the above program:
- (i) For the boundary condition  $A + B > C$  case (scalene triangle), identify test cases to verify the boundary.
- (ii) For the boundary condition  $A = C$  case (isosceles triangle), identify test cases to verify the boundary.
- (iii) For the boundary condition  $A = B = C$  case (equilateral triangle), identify test cases to verify the boundary.
- (b) Develop a decision table to generate test cases for this specification. (8)
19. (a) Explain the importance of grey box testing, its advantages and disadvantages. (9)
- (b) Explain the concept of symbolic execution tree. (5)

**OR**

20. (a) Consider the code fragment given below: - (7)

```
1. POWER: PROCEDURE(X, Y);
2. Z ← 1;
3. J ← 1;
4. LAB: IF Y ≥ J THEN
```

## COMPUTER SCIENCE AND DESIGN

```

5. DO; Z ← Z * X;
6. J ← J + 1;
7. GO TO LAB; END;
8. RETURN (Z) ;
9. END;
    
```

a) Explain Symbolic execution of POWER ( $\alpha_1$ ,  $\alpha_2$ ).

(b) Explain Execution tree for POWER ( $\alpha_1$ ,  $\alpha_2$ ) in the above code fragment. (7)

### TEACHING PLAN

| Index                                                      | Topics                                                                                                                      | No. of Hours (45) |
|------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|-------------------|
| <b>Module 1 (Introduction to Software Testing) 9 Hours</b> |                                                                                                                             |                   |
| 1.1                                                        | Some Popular Errors– Ariane 5, Therac 25, Intel Pentium Bug.                                                                | 1 Hour            |
| 1.2                                                        | What is Software testing? Why should it be tested? Software Quality, Role of Testing.                                       | 1 Hour            |
| 1.3                                                        | Testing Process - Level 0 thinking, Level 1 thinking, Level 2 thinking, Level 3 thinking, Level 4 thinking.                 | 1 Hour            |
| 1.4                                                        | Software Testing Terminologies- Verification, Validation and Testing, Faults, Error and Bug, Test cases, Coverage Criteria. | 1 Hour            |
| 1.5                                                        | Types of Testing- Unit testing, integration testing, System testing, Acceptance testing, Beta testing                       | 1 Hour            |
| 1.6                                                        | Functional testing, Stress testing                                                                                          | 1 Hour            |
| 1.7                                                        | Performance testing, Usability testing and Regression testing.                                                              | 1 Hour            |
| 1.8                                                        | Testing Methods - Black Box testing                                                                                         | 1 Hour            |
| 1.9                                                        | Grey Box testing.                                                                                                           | 1 Hour            |
| <b>Module 2 (Unit testing) 8 Hours</b>                     |                                                                                                                             |                   |

## COMPUTER SCIENCE AND DESIGN

|                                                                |                                                                                                                                                                                                                |        |
|----------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| 2.1                                                            | Concept of Unit testing.                                                                                                                                                                                       | 1 Hour |
| 2.2                                                            | Static Unit testing.                                                                                                                                                                                           | 1 Hour |
| 2.3                                                            | Dynamic Unit testing - Control Flow testing, Data Flow testing                                                                                                                                                 | 1 Hour |
| 2.4                                                            | Domain testing, Functional Program testing.                                                                                                                                                                    |        |
| 2.5                                                            | Mutation testing - Mutation and Mutants, Mutation operators, Mutation score.                                                                                                                                   | 1 Hour |
| 2.6                                                            | Junit - Framework for Unit testing.                                                                                                                                                                            | 1 Hour |
| 2.7                                                            | Case Study - Mutation testing using Junit                                                                                                                                                                      | 1 Hour |
| 2.8                                                            | Case Study - Mutation testing using Muclipse                                                                                                                                                                   | 1 Hour |
| <b>Module 3 (Unit Testing:- White Box Approaches) 10 Hours</b> |                                                                                                                                                                                                                |        |
| 3.1                                                            | Overview of Graph Coverage Criteria                                                                                                                                                                            | 1 Hour |
| 3.2                                                            | Structural Graph Coverage Criteria - Node/vertex coverage, Edge coverage, Edge pair coverage, Path coverage                                                                                                    | 1 Hour |
| 3.3                                                            | Complete path coverage, Prime path coverage, Complete round trip coverage, Simple round trip coverage.                                                                                                         | 1 Hour |
| 3.4                                                            | Data Flow Criteria - du paths, du pairs                                                                                                                                                                        | 1 Hour |
| 3.5                                                            | Subsumption Relationships among Graph Coverage Criteria.                                                                                                                                                       | 1 Hour |
| 3.6                                                            | Graph Coverage for Source Code - Control Flow Graphs (CFG) for code, CFG: If statement, CFG: If statement with return, CFG: Switch-case, CFG: Loops, CFG: Exceptions (try-catch). Example program - Statistics | 1 Hour |
| 3.7                                                            | Graph Coverage for Design Elements - Call graphs and classes, Class inheritance testing: Coverage criteria, Coverage criteria on inheritance graph,                                                            | 1 Hour |

## COMPUTER SCIENCE AND DESIGN

|                                                               |                                                                                                                                                                                                    |        |
|---------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| 3.8                                                           | Data flow at the design level, Inter-procedural DU pairs, Coupling du-pairs example. Example - Quadratic Root                                                                                      | 1 Hour |

|------------|---------------------------------|----------|---|---|---|---------|-------------------------|
|            |                                 | VAC      | 3 | 1 | 0 | 4       | 2019                    |

### Preamble:

This course aims to introduce the learner to an overview of the concepts and algorithms involved in deep learning. Deep learning is a subfield of machine learning, a subfield of artificial intelligence. Basic concepts and application areas of machine learning, deep networks, convolutional neural network and recurrent neural network are covered here. This is a foundational program that will help students understand the capabilities, challenges, and consequences of deep learning and prepare them to participate in the development of leading-edge AI technology. They will be able to gain the knowledge needed to take a definitive step in the world of AI.

**Prerequisite:** Sound knowledge in Basics of linear algebra and probability theory.

|            |                                                                                                                                                         |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CO1</b> | Demonstrate basic concepts in machine learning. <b>(Cognitive Knowledge Level: Understand)</b>                                                          |
| <b>CO2</b> | Illustrate the validation process of machine learning models using hyper-parameters and validation sets. <b>(Cognitive Knowledge Level: Understand)</b> |
| <b>CO3</b> | Demonstrate the concept of the feed forward neural network and its training process. <b>(Cognitive Knowledge Level: Apply)</b>                          |
| <b>CO4</b> | Build CNN and Recurrent Neural Network (RNN) models for different use cases. <b>(Cognitive Knowledge Level: Apply)</b>                                  |
| <b>CO5</b> | Use different neural network/deep learning models for practical applications. <b>(Cognitive Knowledge Level: Apply)</b>                                 |

### Assessment Pattern

| Bloom's Category | Continuous Assessment Tests |                    | End Semester Examination Marks |
|------------------|-----------------------------|--------------------|--------------------------------|
|                  | Test1 (Percentage)          | Test2 (Percentage) |                                |
| Remember         | 30                          | 30                 | 30                             |
| Understand       | 40                          | 40                 | 40                             |
| Apply            | 30                          | 30                 | 30                             |
| Analyse          |                             |                    |                                |
| Evaluate         |                             |                    |                                |
| Create           |                             |                    |                                |

### Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 hours      |

### Continuous Internal Evaluation Pattern:

Attendance : 10 marks

Continuous Assessment Tests : 25 marks

Continuous Assessment Assignment : 15 marks

### Internal Examination Pattern:

Each of the two internal examinations has to be conducted out of 50 marks. First Internal Examination shall be preferably conducted after completing the first half of the syllabus and the Second Internal Examination shall be preferably conducted after completing remaining part of the syllabus.

# COMPUTER SCIENCE AND DESIGN

There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly covered module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly covered module), each with 7 marks. Out of the 7 questions in Part B, a student should answer any 5.

## **End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

## **Syllabus**

### **INTRODUCTION TO DEEP LEARNING**

(General Instructions: Instructors are to introduce students to any one software platform and demonstrate the working of the algorithms in the syllabus using suitable use cases and public datasets to give a better understanding of the concepts discussed. Tutorial hour may be used for this purpose)

#### **Module-1 (Introduction)**

Key components - Data, models, objective functions, optimization algorithms, Learning algorithm. Supervised learning- regression, classification, tagging, web search, page ranking, recommender systems, sequence learning, Unsupervised learning, Reinforcement learning, Historical Trends in Deep Learning. Other Concepts - overfitting, underfitting, hyperparameters and validation sets, estimators, bias and variance.

#### **Module- 2 (Optimization and Neural Networks)**

Neural Networks –Perceptron, Gradient Descent solution for Perceptron, Multilayer perceptron, activation functions, architecture design, chain rule, back propagation, gradient based learning. Introduction to optimization– Gradient based optimization, linear least squares. Stochastic gradient descent, Building ML algorithms and challenges.

## **Module -3 (Convolutional Neural Network)**

Convolutional Neural Networks – convolution operation, motivation, pooling, Structure of CNN, Convolution and Pooling as an infinitely strong prior, variants of convolution functions, structured outputs, data types, efficient convolution algorithms. Practical challenges of common deep learning architectures- early stopping, parameter sharing, dropout. Case study: AlexNet, VGG, ResNet.

## **Module- 4 (Recurrent Neural Network)**

Recurrent neural networks – Computational graphs, RNN design, encoder – decoder sequence to sequence architectures, deep recurrent networks, recursive neural networks, modern RNNs LSTM and GRU, Practical use cases for RNNs.

## **Module-5 (Application Areas)**

Applications – computer vision, speech recognition, natural language processing, common word embedding: continuous Bag-of-Words, Word2Vec, global vectors for word representation (GloVe). Research Areas – autoencoders, representation learning, boltzmann machines, deep belief networks.

## **Text Book**

1. Ian Goodfellow, YoshuaBengio, Aaron Courville, Deep Learning, MIT Press 2015 ed.
2. Aston Zhang, Zachary C. Lipton, Mu Li, and Alexander J. Smola, Dive into Deep Learning, August 2019.
3. Neural Networks and Deep Learning, Aggarwal, Charu C., c Springer International Publishing AG, part of Springer Nature 2018

## **Reference Books**

1. Neural Smithing: Supervised Learning in Feedforward Artificial Neural Networks by Russell Reed, Robert J MarksII, A Bradford Book,2014
2. Practical Convolutional Neural Networks by MohitSewak, Md. Rezaul Karim, PradeepPujari,Packt Publishing 2018
3. Hands-On Deep Learning Algorithms with Python by SudharsanRavichandran,Packt Publishing 2019
4. Deep Learning with Python by Francois Chollet,Manning Publications Co.,2018

## Sample Course Level Assessment Questions

### Course Outcome 1 (CO1):

1. Compare regression and classification.
2. Define supervised learning? Distinguish between regression and classification.
3. Discuss the different learning approaches used in machine learning.

### Course Outcome 2 (CO2):

1. What are hyperparameters? Why are they needed?
2. What issues are to be considered while selecting a model for applying machine learning in a given problem?

### Course Outcome 3 (CO3):

1. Update the parameters  $V_{11}$  in the given MLP using back propagation with learning rate as 0.5 and activation function as sigmoid. Initial weights are given as  $V_{11}=0.2$ ,  $V_{12}=0.1$ ,  $V_{21}=0.1$ ,  $V_{22}=0.3$ ,  $V_{11}=0.2$ ,  $W_{11}=0.5$ ,  $W_{21}=0.2$

2. Draw the architecture of a multi-layer perceptron.
3. Derive update rules for parameters in the multi-layer neural network through the gradient descent.

### Course Outcome 4 (CO4):

1. Give two benefits of using convolutional layers instead of fully connected ones for visual tasks.
2. Suppose that a CNN was trained to classify images into different categories. It performed well on a validation set that was taken from the same source as the training set but not on a testing set. What could be the problem with the training of such a CNN? How will you ascertain the problem? How can those problems be solved?
3. Explain how the cell state is updated in the LSTM model from  $C_{t-1}$  to  $C_t$
4. Show the steps involved in an LSTM to predict stock prices.

# COMPUTER SCIENCE AND DESIGN

## **Course Outcome 5 (CO5):**

1. Explain how the cell state is updated in the LSTM model from  $C_{t-1}$  to  $C_t$
2. Show the steps involved in an LSTM to predict stock prices.
3. Illustrate the workings of the RNN with an example of a single sequence defined on a vocabulary of four words.

## **Course Outcome 6 (CO6):**

1. Development a deep learning solution for problems in the domain i) natural language processing or ii Computer vision (Assignment
2. Illustrate the workings of the RNN with an example of a single sequence defined on a vocabulary of four words.

## **Model Question Paper**

QP CODE:

PAGES:4

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY  
SIXTH SEMESTER B.TECH DEGREE EXAMINATION(MINOR), MONTH & YEAR**

**Course Code: CST 384**

**Course Name: CONCEPTS IN DEEP LEARNING**

**Max. Marks:100**

**Duration: 3 Hours**

### **PART A**

**Answer all Questions. Each question carries 3 Marks**

1. Distinguish between supervised learning and Reinforcement learning. Illustrate with an example.
2. Differentiate classification and regression.
3. Compare overfitting and underfitting. How it can affect model generalization.

## COMPUTER SCIENCE AND DESIGN

4. Why does a single perceptron cannot simulate simple XOR function? Explain how this limitation is overcome?
5. Illustrate the strengths and weaknesses of convolutional neural networks.
6. Illustrate convolution and pooling operation with an example
7. How many parameters are there in AlexNet? Why the dataset size (1.2 million) is important for the success of AlexNet?
8. Explain your understanding of unfolding a recursive or recurrent computation into a computational graph.
9. Illustrate the use of deep learning concepts in Speech Recognition.
10. What is an autoencoder? Give one application of an autoencoder

(10x3=30  
)

### Part B

(Answer any one question from each module. Each question carries 14 Marks)

11. (a) “A computer program is said to learn from experience E with respect to some class of tasks T and performance measure P, if its performance at tasks in T, as measured by P, improves with experience E.” What is your understanding of the terms task, performance and experience. Explain with two example
- (b) “How does bias and variance trade-off affect machine learning algorithms?

(10)

(4)

### OR

12. (a) Illustrate the concepts of Web search, Page Ranking, Recommender systems with suitable examples.
- (b) List and discuss the different hyper parameters used in fine tuning the

(10)

(4)

## COMPUTER SCIENCE AND DESIGN

traditional machine learning models

13. (a) How multilayer neural networks learn and encode higher level features from input features. (7)
- (b) Explain gradient decent and delta rule? Why stochastic approximation to gradient descent is needed? (7)

**OR**

14. (a) Find the new weights for the network using backpropogation algorithm, the network is given with a input pattern[-1,1] and target output as +1, Use learning rate of alpha=0.3 and bipolar sigmoid function. (7)

- (b) Write an algorithm for backpropagation which uses stochastic gradient descent method. Comment on the effect of adding momentum to the network. (7)
15. (a) Input to CNN architecture is a color image of size 112x112x3. The first convolution layer comprises of 64 kernels of size 5x5 applied with a stride of 2 and padding 0. What will be the number of parameters? (5)
- (b) Let  $X = [-1, 0, 3, 5]$   $W = [.3, .5, .2, .1]$  be the the input of  $i^{\text{th}}$  layer of a neural network and to apply softmax function. What should be the output of it? (4)
- (c) Draw and explain the architecture of convolutional network (5)

**OR**

16. (a) Explain the concept behind i) Early stopping ii) dropout iii) weight decay (9)

## COMPUTER SCIENCE AND DESIGN

- (b) How backpropagation is used to learn higher-order features in a convolutional Network? (5)
17. (a) Explain the working of RNN and discuss how backpropagation through time is used in recurrent networks. (8)
- (b) Describe the working of a long short term memory in RNNs. (6)

**OR**

18. (a) What is the vanishing gradient problem and exploding gradient problem? (8)
- (b) Why do RNNs have a tendency to suffer from exploding/vanishing gradient? How to overcome this challenge? (6)
19. (a) Explain any two word embedding techniques (8)
- (b) Explain the merits and demerits of using Auto encoders in Computer Vision. (6)

**OR**

20. (a) Illustrate the use of representation learning in object classification. (7)
- (b) Compare Boltzmann Machine with Deep Belief Network. (7)

### Teaching Plan

|                                             |                                                                                                        |        |
|---------------------------------------------|--------------------------------------------------------------------------------------------------------|--------|
| <b>CONCEPTS IN DEEP LEARNING (45 Hours)</b> |                                                                                                        |        |
| <b>Module 1 : Introduction (9 hours)</b>    |                                                                                                        |        |
| 1.1                                         | Key components - Data, models, objective functions, optimization algorithms.<br>(TB2: Section 1.1-1.2) | 1 hour |

## COMPUTER SCIENCE AND DESIGN

|                                                              |                                                                                                                 |        |
|--------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|--------|
| 1.2                                                          | Learning algorithm (TB1: Section 5.1), Supervised learning- regression, classification (TB2: Section 1.3.1)     | 1 hour |
| 1.3                                                          | tagging, web search, page ranking (TB2: Section 1.3.1)                                                          | 1 hour |
| 1.4                                                          | Recommender systems, Sequence learning, Unsupervised learning, Reinforcement learning(TB2: Section 1.3.2-1.3.4) | 1 hour |
| 1.5                                                          | Historical Trends in Deep Learning (TB1: Section 1.2).                                                          | 1 hour |
| 1.6                                                          | Concepts: over-fitting, under-fitting, hyperparameters and validation sets. (TB1: Section 5.2-5.3)              | 1 hour |
| 1.7                                                          | Concepts: Estimators, bias and variance. (TB1: Section 5.4)                                                     | 1 hour |
| 1.8                                                          | Demonstrate the concepts of supervised learning algorithms using a suitable platform.                           | 1 hour |
| 1.9                                                          | Demonstrate the concepts of unsupervised using a suitable platform.                                             | 1 hour |
| <b>Module 2 : Optimization and Neural Networks (9 hours)</b> |                                                                                                                 |        |
| 2.1                                                          | Perceptron, Stochastic Gradient descent, Gradient descent solution for perceptron (TB3: Section 1.1 - 1.2.1)    | 1 hour |
| 2.2                                                          | Multilayer perceptron (TB3: Section 1.2.2), (TB1: Section 6.1,6.3)                                              | 1 hour |
| 2.3                                                          | Activation functions- Sigmoid, tanh, Softmax, ReLU, leaky ReLU (TB3: Section 1.2.1.3 - 1.2.1.5)                 | 1 hour |
| 2.4                                                          | Architecture design (TB1: Section 6.4, TB3: Section 1.6)                                                        | 1 hour |
| 2.5                                                          | Chain rule, back propagation (TB3: Section 1.3)                                                                 | 1 hour |

## COMPUTER SCIENCE AND DESIGN

|                                                        |                                                                                                                                                            |        |
|--------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| 2.6                                                    | Gradient based learning (TB1: Section 6.2)                                                                                                                 | 1 hour |
| 2.7                                                    | Gradient based optimization (TB1: Section 4.3)                                                                                                             | 1 hour |
| 2.8                                                    | Linear least squares using a suitable platform. (TB1: Section 4.5)                                                                                         | 1 hour |
| 2.9                                                    | Building ML Algorithms and Challenges (TB3: 1.4, TB1: 5.10-5.11)                                                                                           | 1 hour |
| <b>Module 3 :Convolution Neural Network (10 hours)</b> |                                                                                                                                                            |        |
| 3.1                                                    | Convolution operation, Motivation, pooling (TB1:Section 9.1-9.3)                                                                                           | 1 hour |
| 3.2                                                    | Structure of CNN (TB3: Section 8.2)                                                                                                                        | 1 hour |
| 3.3                                                    | Convolution and Pooling as an infinitely strong prior (TB1: Section 9.4)                                                                                   | 1 hour |
| 3.4                                                    | Variants of convolution functions – multilayer convolutional network, tensors, kernel flipping, downsampling, strides and zero padding. (TB1: Section 9.5) | 1 hour |
| 3.5                                                    | Variants of convolution functions - unshared convolutions, tiled convolution, training different networks. (TB1: Section 9.5)                              | 1 hour |
| 3.6                                                    | Structured outputs, data types (TB1: Section 9.6-9.7)                                                                                                      | 1 hour |
| 3.7                                                    | Efficient convolution algorithms. (TB1: Section 9.8,9.10)                                                                                                  | 1 hour |
| 3.8                                                    | Practical challenges of common deep learning architectures- early Stopping (TB3: 4.6)                                                                      | 1 hour |
| 3.9                                                    | Practical challenges of common deep learning architectures- parameter sharing, drop-out (TB3: Section 4.9, 4.5.4)                                          | 1 hour |
| 3.10                                                   | Case Study: AlexNet,VGG, ResNet. (TB3: Section 8.4.1-8.4.3,8.4.5)                                                                                          | 1 hour |

## COMPUTER SCIENCE AND DESIGN

| <b>Module 4 :Recurrent Neural Network (8 hours)</b>   |                                                                                                             |        |
|-------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|--------|
| 4.1                                                   | Computational graphs (TB1: Section 10.1)                                                                    | 1 hour |
| 4.2                                                   | RNN (TB1: Section 10.2-10.3)                                                                                | 1 hour |
| 4.3                                                   | Encoder – decoder sequence to sequence architectures. (TB1: Section 10.4)                                   | 1 hour |
| 4.4                                                   | Deep recurrent networks (TB1: Section 10.5)                                                                 | 1 hour |
| 4.5                                                   | Recursive neural networks , Modern RNNs, (TB1: Section 10.6, 10.10)                                         | 1 hour |
| 4.6                                                   | LSTM and GRU (TB1: Section 10.10, TB3: Section 7.5-7.6)                                                     | 1 hour |
| 4.7                                                   | Practical use cases for RNNs. (TB1: Section 11.1-11.4)                                                      | 1 hour |
| 4.8                                                   | Demonstrate the concepts of RNN using a suitable platform.                                                  | 1 hour |
| <b>Module 5 : Applications and Research (9 hours)</b> |                                                                                                             |        |
| 5.1                                                   | Computer vision. (TB1: Section 12.2)                                                                        | 1 hour |
| 5.2                                                   | Speech recognition. (TB1: Section 12.3)                                                                     | 1 hour |

**Preamble:**

This is the course for awarding B.Tech. Minor in Computer Science and Design with specialization in Computer Graphics. The purpose of this course is to make awareness about the basic concepts in web design, standards and Java script. This course helps the learner to understand WebGL for rendering high-performance interactive 3D and 2D graphics in Game design. The study of computer graphics and related web application tools enables for creating various web-based Graphics applications.

**Prerequisite:** Knowledge of Programming is required.

**Course Outcomes:** After the completion of the course the student will be able to:

| CO# | CO                                                                                                                                          |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------|
| CO1 | Summarize basic principles, rules and design of web site, considering the user requirements. <b>(Cognitive Knowledge level: Understand)</b> |
| CO2 | Design websites adhering to current web standards (HTML, XHTML and HTML5). <b>(Cognitive Knowledge level: Apply)</b>                        |
| CO3 | Construct visually formatted web pages using CSS. <b>(Cognitive Knowledge level: Apply)</b>                                                 |
| CO4 | Use scripting language JavaScript to create interactive components in web pages. <b>(Cognitive Knowledge level: Apply)</b>                  |
| CO5 | Use JavaScript API WEBGL for rendering high-performance interactive 3D and 2D graphics <b>(Cognitive Knowledge level: Apply)</b>            |

### Assessment Pattern

| Bloom's Category | Continuous Assessment Tests |            | End Semester Examination Marks (%) |
|------------------|-----------------------------|------------|------------------------------------|
|                  | Test 1 (%)                  | Test 2 (%) |                                    |
| Remember         | 30                          | 30         | 30                                 |
| Understand       | 30                          | 30         | 30                                 |
| Apply            | 40                          | 40         | 40                                 |
| Analyze          |                             |            |                                    |
| Evaluate         |                             |            |                                    |
| Create           |                             |            |                                    |

## COMPUTER SCIENCE AND DESIGN

### Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 hours      |

#### Continuous Internal Evaluation Pattern:

|                                                               |          |
|---------------------------------------------------------------|----------|
| Attendance                                                    | 10 marks |
| Continuous Assessment Tests (Average of Series Tests - 1 & 2) | 25 marks |
| Continuous Assessment Assignment                              | 15 marks |

#### Internal Examination Pattern:

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

#### End Semester Examination Pattern:

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 full questions from each module of which student should answer any one full question. Each question can have maximum 2 sub-divisions and carries 14 marks.

## Syllabus

### **Module - 1 (Introduction to World Wide Web)**

Introduction to world wide web, basic principles involved in developing a web site, rules of web designing, web standards, Web Browsers, Web Servers, Basic internet protocols, Uniform Resource Locators, Multipurpose Internet Mail Extensions, The Hypertext Transfer Protocol. Common Gateway Interface (CGI), Content Management System – Basics, Design concepts.

### **Module - 2 (Web Design using HTML5)**

Clients, servers, introduction to Markup languages, scripting languages, Introduction to elements of HTML and XHTML, Introduction to Document object model (DOM).

Introduction to HTML5: Structuring & editing an HTML5 document, Fundamentals of HTML - Headings-Hyper Links- Images - Special Characters & Horizontal Rules-Lists- Tables -Forms - Internal Linking- Meta Elements-HTML5 Form input types -Input and Data List Elements and auto complete attribute- Page Structure Elements -Multimedia-HTML5 Audio & video elements.

### **Module - 3 (Introduction to CSS)**

Introduction to Style sheets: Introduction to CSS-Basic syntax and structure-Inline Styles, Embedded Style Sheets, Conflict Resolution, Linking External Style Sheets-Exploring CSS Selectors-Properties, values, Positioning Elements: Absolute Positioning, Relative Positioning - Backgrounds-List Styles-Element Dimensions- Table Layouts-Box Model and Text Flow-div and span -Basics of Responsive CSS, Media port & Media Queries.

### **Module -4 (JavaScript Fundamentals)**

Introduction to Scripting- Programming fundamentals of JavaScript - Data types, Values, Variables, Expressions and Operators. Obtaining User Input with prompt Dialog - Arithmetic-Decision Making -Control Statements - Functions -Arrays - Strings - Objects -Document Object Model (DOM) -Form processing. Difference between server side and client-side JavaScript, embedding JavaScript in HTML and frameworks, DOM and event handling, error handling, mouse, text, drag, drop and keyboard events and node operations, Animation and multimedia Forms of Debugging.

### **Module - 5 (WEBGL)**

WEBGL overview, WEBGL application, Sample Application, Context, Geometry, Shaders, Associating Attributes and Buffer Objects, Drawing a Model.

WEBGL EXAMPLES: Drawing Points, Drawing a Triangle, Modes of Drawing.

### **Text Book**

1. Paul J. Deitel, Harvey M. Deitel, Abbey Deitel, Internet & World Wide Web How to Program 5th Edition, Pearson Education.

2. Thomas A Powell, HTML & CSS: The Complete Reference, Tata McGraw Hill Publications, 5th Edition.
3. Kouichi Matsuda, Rodger Lea, WebGL Programming Guide: Interactive 3D Graphics Programming with WebGL, Pearson Education,

## References

1. Scott Guelich, Shishir Gundavaram, Gunther Birzniek; CGI Programming with Perl 2/e, O'Reilly.
2. Doug Tidwell, James Snell, Pavel Kulchenko; Programming Web Services with SOAP, O'Reilly, 2001
3. Robert. W. Sebesta, "Programming the World Wide Web", Fourth Edition, Pearson Education, 2007.

## Sample Course Level Assessment Questions.

### Course Outcome 1 (CO1):

1. What is MIME? Give the expansion of MIME. List four examples for MIME types. State the reason why MIME type specification is necessary in a request-response transaction between a browser and server.
2. Explain Hypertext Transfer Protocol and Common Gateway Interface in detail.

### Course Outcome 2 (CO2):

1. Construct a valid HTML document for your personal Profile registration page for a Job Site www.123Jobs.com. Add relevant HTML elements in a table, to accept a minimum of 10 different fields which includes your name, address, phone, email address, your picture, your college; your branch, fields for your personal history (Minimum 3 fields), favorite theory and practical subjects (Checkbox), Username, Password(password).
2. What is codec? Recognize the role of controls attribute in <video> and <audio> tag in HTML. Use the COVID vaccination promotional video 'MySafety.mp4' in a web page with suitable HTML code, 'Autoplay' option enabled and displayed in a standard dimension 750 X500.

### Course Outcome 3 (CO3):

1. Organize a sample web page for the event 'Raagam2021' at your campus and use embedded Style sheets to apply a minimum 5 styles. State the Style Specification format of embedded style sheets.
2. Write CSS style rules to implement the following in a web page:
  - a. to display the content of hyperlinks with yellow background color and in italics.
  - b. to display the contents of unordered lists in bold and in Arial font.
  - c. to display a background image titled "birds.jpg" with no tiling.

**Course Outcome 4(CO4):**

1. Write the code for an HTML document with embedded JavaScript scripts, which initially displays a paragraph with text "Welcome" and a button titled "Click". When the button is clicked, the message "Hello from JavaScript" in bold should replace the paragraph text.
2. Illustrate the usage of JavaScript DOM in event handling and explain any three methods with example.

**Course Outcome 5 (CO5):**

1. What are the modes of drawing used in WebGL? Illustrate with suitable examples.
2. Explain the structure of WebGL application with an example code.

**Model Question paper**

|                                                                |                |                                                                                                                                                                       |                       |

| <b>No</b>            | <b>Topic</b>                                                                             | <b>No. of Lectures (45)</b> |
|                      | <b>Module-1 (Introduction to World Wide Web)</b>                                         | <b>7</b>                    |
| 1.1                  | Introduction to world wide web                                                           | 1                           |
| 1.2                  | Basic principles involved in developing a web site, rules of web designing               | 1                           |
| 1.3                  | Web standards, Web Browsers, Web Servers                                                 | 1                           |
| 1.4                  | Basic internet protocols, Uniform Resource Locators                                      | 1                           |
| 1.5                  | Multipurpose Internet Mail Extensions                                                    | 1                           |
| 1.6                  | The Hypertext Transfer Protocol, Common Gateway Interface (CGI)                          | 1                           |
| 1.7                  | Content Management System – Basics, Design concepts                                      | 1                           |
|                      | <b>Module-2 (Web Design using HTML5)</b>                                                 | <b>9</b>                    |
| 2.1                  | Clients, servers, Introduction to Markup languages, scripting languages                  | 1                           |
| 2.2                  | Introduction to elements of HTML and XHTML, Introduction to Document object model (DOM). | 1                           |
| 2.3                  | Introduction to HTML5: Structuring & editing an HTML5 document                           | 1                           |
| 2.4                  | Fundamentals of HTML - Headings-Hyper Links                                              | 1                           |
| 2.5                  | Images - Special Characters & Horizontal Rules-Lists                                     | 1                           |
| 2.6                  | Tables -Forms - Internal Linking                                                         | 1                           |
| 2.7                  | Meta Elements-HTML5 Form input types                                                     | 1                           |
| 2.8                  | Input and Data List Elements and auto complete attribute-Page Structure Elements         | 1                           |
| 2.9                  | Multimedia-HTML5 Audio & video elements                                                  | 1                           |
|                      | <b>Module-3 (Introduction to CSS)</b>                                                    | <b>9</b>                    |

|      |                                                                                   |           |
|------|-----------------------------------------------------------------------------------|-----------|
| 3.1  | Introduction to Style sheets: Introduction to CSS-Basic syntax and structure      | 1         |
| 3.2  | Inline Styles, Embedded Style Sheets                                              | 1         |
| 3.3  | Conflict Resolution, Linking External Style Sheets                                | 1         |
| 3.4  | Exploring CSS Selectors-Properties, values                                        | 1         |
| 3.5  | Positioning Elements: Absolute Positioning, Relative Positioning                  | 1         |
| 3.6  | Backgrounds-List Styles-Element Dimensions- Table Layouts-Box Model and Text Flow | 1         |
| 3.7  | div and span -Basics of Responsive CSS                                            | 1         |
| 3.8  | Media port & Media Queries                                                        | 1         |
| 3.9  | Media port & Media Queries                                                        | 1         |
|      | <b>Module-4 (JavaScript Fundamentals)</b>                                         | 10        |
| 4.1  | Introduction to Scripting- Programming fundamentals of JavaScript                 | 1         |
| 4.2  | Data types, Values, Variables, Expressions and Operators                          | 1         |
| 4.3  | Obtaining User Input with prompt Dialog                                           | 1         |
| 4.4  | Arithmetic-Decision Making -Control Statements                                    | 1         |
| 4.5  | Functions -Arrays - Strings - Objects -Document Object Model (DOM)                | 1         |
| 4.6  | Form processing. Difference between server side and client-side JavaScript,       | 1         |
| 4.7  | Embedding JavaScript in HTML and frameworks                                       | 1         |
| 4.8  | DOM and event handling, error handling                                            | 1         |
| 4.9  | Mouse, text, drag, drop and keyboard events and node operations                   | 1         |
| 4.10 | Animation and multimedia Forms of Debugging                                       | 1         |
|      | <b>Module-5 (WEBGL)</b>                                                           | <b>10</b> |
| 5.1  | WEBGL overview                                                                    | 1         |

|      |                                                    |   |
|------|----------------------------------------------------|---|
| 5.2  | WEBGL application, Sample Application              | 1 |
| 5.3  | Context, Geometry                                  | 1 |
| 5.4  | Shaders, Associating Attributes and Buffer Objects | 1 |
| 5.5  | Shaders, Associating Attributes and Buffer Objects | 1 |
| 5.6  | Drawing a Model                                    | 1 |
| 5.7  | WEBGL EXAMPLES: Drawing Points                     | 1 |
| 5.8  | Drawing a Triangle                                 | 1 |
| 5.9  | Modes of Drawing                                   | 1 |
| 5.10 | Examples                                           | 1 |

## COMPUTER SCIENCE AND DESIGN

| CST<br>394 | NETWORK<br>SECURITY | Category | L | T | P | Credits | Year of Introduction |
|------------|---------------------|----------|---|---|---|---------|----------------------|
|            |                     | VAC      | 3 | 1 | 0 | 4       | 2019                 |

**Preamble:**

The purpose of this course is to create a better understanding of the network security concepts. This course covers network security standards, email security services, web security mechanisms, firewalls and wireless security mechanisms. This course helps the learner to gain insight into the key aspects of secure network communication and enables to apply in real-life scenarios.

**Prerequisite:** A sound background in Number Theory and Cryptographic Algorithms.

**Course Outcomes:** After the completion of the course the student will be able to

| CO# | Course Outcomes                                                                                                                             |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------|
| CO1 | Identify the key aspects of security, intrusion detection systems and digital signature schemes ( <b>Cognitive Knowledge Level: Apply</b> ) |
| CO2 | Explain the security standards used in network communication ( <b>Cognitive Knowledge Level:Understand</b> )                                |
| CO3 | Identify the mechanisms in email security services ( <b>Cognitive Knowledge Level: Apply</b> )                                              |
| CO4 | Summarize the protocols used to provide web security ( <b>Cognitive Knowledge Level: Understand</b> )                                       |
| CO5 | Explain the fundamental concepts of wireless network security and firewalls ( <b>Cognitive Knowledge Level: Understand</b> )                |

### Assessment Pattern

| Bloom's Category | Continuous Assessment Tests |            | End Semester Examination (%) |
|------------------|-----------------------------|------------|------------------------------|
|                  | Test 1 (%)                  | Test 2 (%) |                              |
| Remember         | 30                          | 30         | 30                           |
| Understand       | 40                          | 40         | 40                           |
| Apply            | 30                          | 30         | 30                           |
| Analyze          |                             |            |                              |
| Evaluate         |                             |            |                              |
| Create           |                             |            |                              |

## COMPUTER SCIENCE AND DESIGN

### Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3            |

#### Continuous Internal Evaluation Pattern:

Attendance : 10 marks

Continuous Assessment Tests : 25 marks

Continuous Assessment Assignment : 15 marks

#### Internal Examination Pattern:

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

#### End Semester Examination Pattern:

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 2 sub-divisions and carries 14 marks.

# COMPUTER SCIENCE AND DESIGN

## Syllabus

### **Module – 1 (Network Security Basics)**

Introduction to network security - Security requirements, Challenges of security, Network security model. Malicious programs – Worms, Viruses, Trojans, Spyware, Adware. Intrusion Detection Systems (IDS) - Uses, Techniques. Digital signatures - ElGamal, Schnorr, Digital Signature Standard (DSS).

### **Module – 2 (Network Security Standards)**

Kerberos v4 – Configuration, Authentication, Encryption, Message formats. Kerberos v5 – Cryptographic algorithms, Message formats. Public Key Infrastructure (PKI) – Trust models, Revocation. Real-time communication security – Perfect Forward Secrecy (PFS), Denial-of-Service protection, Endpoint identifier hiding, Live partner reassurance. Internet Protocol Security (IPSec) - Authentication Header (AH), Encapsulating Security Payload (ESP), Internet Key Exchange (IKE) phases.

### **Module – 3 (Email Security)**

Introduction to email security - Security services for email, Establishing keys, Privacy, Authentication, Message integrity, Non-repudiation. Privacy Enhanced Mail (PEM) – Encryption, Source authentication and integrity protection, Message formats. Secure/Multipurpose Internet Mail Extensions (S/MIME) – Messages, Differences from PEM. Pretty Good Privacy (PGP) - Encoding, Certificate and key revocation, Anomalies, Object formats.

### **Module – 4 (Web Security)**

Introduction to web security - Web security considerations, Threats. Secure Sockets Layer (SSL) – Architecture, Protocols, Transport Layer Security (TLS) – Differences from SSL. Hypertext Transfer Protocol Secure (HTTPS) – Connection initiation, Closure. Secure Shell (SSH) – Transport layer protocol, User authentication protocol, Connection protocol.

### **Module – 5 (Wireless Network Security and Firewalls)**

IEEE 802.11 Wireless LAN - Network components, Architectural model, Services. IEEE 802.11i wireless LAN security - Services, Phases of operation. Wired Equivalent Privacy (WEP), Wi-Fi Protected Access (WPA), WPA2, Wireless Application Protocol (WAP) – Services, Protocol architecture. Firewalls – Need for firewalls, Packet filters, Circuit-level firewalls, Application layer firewalls.

### **Text Books**

1. C. Kaufman, R. Perlman and M. Speciner, “Network Security: Private Communication in a Public World”, 2/e, PHI.
2. William Stallings, “Cryptography and Network Security Principles and Practice”, 5/e, Pearson

Education Asia.

## References

1. Behrouz A. Forouzan, Debdeep Mukhopadhyay, “Cryptography and Network Security”, 3/e, Tata McGraw Hill.
2. Tyler Wrightson, “Wireless Network Security A Beginner’s Guide”, 2012, Tata McGraw Hill.
3. William Stallings, “Network Security Essentials: Applications and Standards”, 4/e, Prentice Hall.
4. Schiller J., Mobile Communications, 2/e, Pearson Education.
5. Roberta Bragg et. al., “Network Security: The Complete Reference”, Tata McGraw Hill.

## Course Level Assessment Questions

### Course Outcome 1 (CO1):

1. Using the Schnorr digital signature scheme, let  $q = 83$ ,  $p = 997$  and  $d = 23$ . Find values for  $e_1$  and  $e_2$ .
2. The Digital Signature Algorithm (DSA) specifies that if the signature generation process results in a value of zero, a new value of  $k$  should be generated and the signature should be recalculated. Give reason.

### Course Outcome 2 (CO2):

1. In Kerberos v4, the authenticator field is not of security benefit when asking the Key Distribution Center (KDC) for a ticket for Bob, but useful when logging in as Bob. Give reasons for your answer.
2. How does the stateless cookie protocol provide clogging protection?

### Course Outcome 3 (CO3):

1. If Alice is sending an ENCRYPTED message, she first signs the message digest with her private key and then encrypts the message digest with the pre-message secret key. Why this last encryption was considered necessary for encrypted messages and not for MIC-CLEAR or MIC-ONLY?
2. Which security services are considered desirable in the following cases? (i) Sending a purchase order (ii) Sending a ransom note. (iii) Sending a mission description to security officials.
3. Explain the security mechanism used in Gmail communication.

## COMPUTER SCIENCE AND DESIGN

### **Course Outcome 4 (CO4):**

1. Is it possible in SSL for the receiver to reorder SSL record blocks that arrive out of order?  
If so, how it can be done? If not, why?
2. Describe any five web security threats, their consequences and countermeasures.

### **Course Outcome 5 (CO5):**

1. Explain the security areas addressed by IEEE 802.11i.
2. Describe the advantages and disadvantages of application layer firewalls.

# COMPUTER SCIENCE AND DESIGN

## Model Question Paper

**QP CODE:**

**Reg. No:** \_\_\_\_\_

**Name:** \_\_\_\_\_

**PAGES : 3**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**SIXTH SEMESTER B.TECH. DEGREE (HONORS) EXAMINATION, MONTH & YEAR**

**Course Code: CST 394**

**Course Name: Network Security**

**Max.Marks:100**

**Duration: 3 Hours**

### **PART A**

**Answer all Questions. Each question carries 3 Marks**

1. Distinguish between signature-based and anomaly-based intrusion detection techniques.
2. A trusted third party is considered as a main component in a network security model. Why?
3. How is endpoint identifier hiding achieved in real-time communication?
4. Show how encryption is used to provide privacy and integrity in Kerberos v5.
5. End-to-end privacy is essential for e-mail security. How is this achieved?
6. List the four steps for preparing an EnvelopedData MIME entity.
7. Show the operation of a Secure Sockets Layer (SSL) Record protocol.
8. For Secure Shell (SSH) packets, what is the advantage of not including the MAC in the scope of packet encryption?
9. List the three security services provided by IEEE 802.11i.
10. Define the terms Access Point, Basic Service Set, Extended Service Set.

**(10x3=30)**

# COMPUTER SCIENCE AND DESIGN

## Part B

(Answer any one question from each module. Each question carries 14 Marks)

11. (a) Using the ElGamal scheme, let  $p = 881$  and  $d = 700$ , find values for  $e_1$  and  $e_2$ . Choose  $r = 17$ . Find the value of  $S_1$  and  $S_2$  if  $M = 400$ . (8)
- (b) Explain the requirements and challenges of network security. (6)

OR

12. (a) In ElGamal, Schnorr and DSS, what happens if an attacker can find the value of random secret key used by the signer? Also, what happens if a user uses the same value of random secret key to sign two messages? Explain your answer for each scheme separately. (8)
- (b) Explain the network security model with the help of a neat diagram. (6)
13. (a) Alice wishes to log into Bob's workstation remotely. List the steps involved in this communication if Kerberos v4 is used. (7)
- (b) How does Diffie-Hellman technique provide perfect forward secrecy using signature keys? (7)

OR

14. (a) Explain the algorithm for Message Authentication Code (MAC) calculation and verification in Kerberos v5 rsa-md5-des. (8)
- (b) Compare the aggressive mode and main mode of Phase 1 Internet Key Exchange (IKE). (6)
15. (a) Describe the different methods by which authentication of source is performed in email communication. (7)
- (b) Explain the Signed data and Clear-signed data functions provided by S/MIME. (7)

OR

16. (a) Explain the advantages of Pretty Good Privacy (PGP) over Privacy Enhanced Mail (PEM). (7)

## COMPUTER SCIENCE AND DESIGN

- (b) Define non-repudiation. Describe the different ways by which it is implemented in email communication. (7)
17. (a) Describe the significance of pseudo-random function of Transport Layer Security. (7)
- (b) Explain the four different phases of Secure Sockets Layer (SSL) Handshake Protocol. (7)
- OR**
18. (a) Describe how connection initiation and connection closure is done in Hyper Text Transfer Protocol Secure (HTTPS). (7)
- (b) Illustrate the sequence of events in Secure Shell (SSH) transport layer protocol packet exchanges. (7)
19. (a) Explain the Discovery phase and Authentication phase of IEEE 802.11i operation. (7)
- (b) Why are firewalls needed? Compare the features of packet filters and circuit level firewalls. (7)
- OR**
20. (a) Explain the two authentication methods used in Wired Equivalent Privacy (WEP). (7)
- (b) Describe the three transaction classes provided by Wireless Transaction Protocol. (7)

### Preamble:

This course enables the learners to understand the advanced concepts and algorithms in machine learning. The course covers the standard and most popular supervised learning algorithms such as linear regression, logistic regression, decision trees, Bayesian learning and the naive Bayes algorithm, basic clustering algorithms, auto encoders, sampling methods and PAC learning. This course helps the students to provide machine learning based solutions to real world problems.

**Prerequisite:** Basic understanding of probability theory, linear algebra, multivariate calculus and multivariate probability theory.

|            |                                                                                                                                                            |

### Continuous Internal Evaluation Pattern:

Attendance : 10 marks

Continuous Assessment Tests : 25 marks

# COMPUTER SCIENCE AND DESIGN

Continuous Assessment Assignment : 15 marks

## **Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks

First Internal Examination shall be preferably conducted after completing the first half of the syllabus and the Second Internal Examination shall be preferably conducted after completing remaining part of the syllabus.

There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly covered module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly covered module), each with 7 marks. Out of the 7 questions in Part B, a student should answer any 5.

## **End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have a maximum 2 sub-divisions and carry 14 marks.

## **Syllabus**

### **Module -1 (Supervised Learning)**

Overview of machine learning - supervised, semi-supervised, unsupervised learning, reinforcement learning Regression algorithms: least squares linear regression, gradient descent, closed form, normal equations, regularization techniques (LASSO, RIDGE), polynomial regression. Discriminative Methods - Logistic Regression, Decision Tree Learning. Generative Methods - Naive Bayes Classifier, Gaussian Discriminant Analysis (GDA).

### **Module -2 (Unsupervised Learning)**

Clustering - Similarity measures, Hierarchical Agglomerative Clustering, K-means partitional clustering, K-medoids clustering, Gaussian mixture models: Expectation Maximization (EM) algorithm for Gaussian mixture model.

## **Module -3 (Practical aspects in machine learning)**

Classification Performance measures - Precision, Recall, Accuracy, F-Measure, ROC, AUC, generalisation and overfitting, cross-validation, bias-variance tradeoff, error estimation, parameter and model selection. Ensemble Methods - Bagging, Boosting, Adaboost, Random Forests.

## **Module -4 (Statistical Learning Theory)**

Models of learnability- learning in the limit, probably approximately correct (PAC) learning. Sample complexity- quantifying the number of examples needed to PAC learn, Computational complexity of training, Sample complexity for finite hypothesis spaces, PAC results for learning conjunctions, Sample complexity for infinite hypothesis spaces, Vapnik-Chervonenkis(VC) dimension.

## **Module -5 (Advanced Machine Learning Topics)**

Graphical models - Bayesian belief networks, Markov random fields(MRFs), Inference on chains and factor graphs, inference on clique trees. Monte Carlo methods – Basic sampling algorithms, rejection sampling, importance sampling, Markov chain Monte Carlo(MCMC), Gibbs sampling. Variational methods. Auto Encoder, Variational AutoEncoder, Generative Adversarial Networks

**Sample Course Level Assessment Questions**

**Course Outcome1 (CO1):**

1. Consider a naive Bayes classifier with 3 boolean input variables,  $X_1$ ,  $X_2$  and  $X_3$ , and one boolean output,  $Y$ . How many parameters must be estimated to train such a naive Bayes classifier? How many parameters would have to be estimated to learn the above classifier if we do not make the naive Bayes conditional independence assumption?
2. Describe the ID3 algorithm. Is the order of attributes identical in all branches of the decision tree?
3. Explain the difference between (batch) gradient descent and stochastic gradient descent. Give an example of when you might prefer one over the other.
4. Suppose that you are asked to perform linear regression to learn the function that outputs  $y$ , given the  $D$ -dimensional input  $x$ . You are given  $N$  independent data points, and that all the  $D$  attributes are linearly independent. Assuming that  $D$  is around 100, would you prefer the closed form solution or gradient descent to estimate the regressor?
5. Suppose you have a three class problem where class label  $y \in \{0, 1, 2\}$  and each training example  $X$  has 3 binary attributes  $X_1, X_2, X_3 \in \{0, 1\}$ . How many parameters (probability distribution) do you need to know to classify an example using the Naive Bayes classifier?

**Course Outcome 2(CO2):**

1. Which similarity measure could be used to compare feature vectors of two images? Justify your answer.
2. Illustrate the strength and weakness of k-means algorithm.
3. Suppose you want to cluster the eight points shown below using k-means

|       | $A_1$ | $A_2$ |
|-------|-------|-------|
| $x_1$ | 2     | 10    |
| $x_2$ | 2     | 5     |
| $x_3$ | 8     | 4     |
| $x_4$ | 5     | 8     |
| $x_5$ | 7     | 5     |
| $x_6$ | 6     | 4     |
| $x_7$ | 1     | 2     |
| $x_8$ | 4     | 9     |

Assume that  $k = 3$  and that initially the points are assigned to clusters as follows:

$C_1 = \{x_1, x_2, x_3\}$ ,  $C_2 = \{x_4, x_5, x_6\}$ ,  $C_3 = \{x_7, x_8\}$ . Apply the  $k$ -means algorithm until convergence, using the Manhattan distance.

4. Cluster the following eight points representing locations into three clusters:  $A_1(2, 10)$ ,  $A_2(2, 5)$ ,  $A_3(8, 4)$ ,  $A_4(5, 8)$ ,  $A_5(7, 5)$ ,  $A_6(6, 4)$ ,  $A_7(1, 2)$ ,  $A_8(4, 9)$ .

Initial cluster centers are:  $A_1(2, 10)$ ,  $A_4(5, 8)$  and  $A_7(1, 2)$ .

The distance function between two points  $a = (x_1, y_1)$  and  $b = (x_2, y_2)$  is defined as  $D(a, b) = |x_2 - x_1| + |y_2 - y_1|$

Use  $k$ -Means Algorithm to find the three cluster centers after the second iteration.

**Course Outcome 3(CO3):**

1. What is ensemble learning? Can ensemble learning using linear classifiers learn classification of linearly non-separable sets?
2. Describe boosting. What is the relation between boosting and ensemble learning?
3. Classifier A attains 100% accuracy on the training set and 70% accuracy on the test set. Classifier B attains 70% accuracy on the training set and 75% accuracy on the test set. Which one is a better classifier. Justify your answer.
4. What are ROC space and ROC curve in machine learning? In ROC space, which points correspond to perfect prediction, always positive prediction and always negative prediction? Why?
5. Suppose there are three classifiers A,B and C. The (FPR, TPR) measures of the three classifiers are as follows – A (0, 1), B (1, 1) , C (1,0.5). Which can be considered as a perfect classifier? Justify your answer.

**Course Outcome 4(CO4):**

1. A monotone conjunction is a conjunction of the variables such that no variable is negated. Show that the concept class of monotone conjunction is probably approximately correct (PAC)-learnable.
2. Consider a Boolean classification problem with  $n$  binary variables and a hypothesis space  $H$ , where each hypothesis is a decision tree of depth 2, using only two variables. How many training examples,  $m$  suffice to assure that with probability at least 0.99, any consistent learner using  $H$  will output a hypothesis with true error at most 0.05
3. Show that the concept class  $C$  containing the set of all boolean functions on  $n$  variable is not PAC-learnable.

4. What is the Vapnik-Chervonenkis(VC)-dimension of a circle centered at the origin.
5. A hypothesis space that has a high VC dimension is good, bad, or neither? Explain in terms of both (a) richness or expressive power of the hypotheses, and (b) sample complexity.

**Course Outcome 5(CO5):**

1. Write down the factored conditional probability expression that corresponds to the graphical Bayesian Network shown below.

2. How do we learn the conditional probability tables(CPT) in Bayesian networks if information about some variables is missing? How are these variables called?

**Course Outcome 6 (CO6):**

1. Derive an algorithm using the inverse transform method to generate a random sample from the exponential distribution.
2. Explain the pros and cons of importance sampling versus rejection sampling.
3. Sketch the core idea of the Monte Carlo method. What is a sample? What is a direct sampling method? Why can't it be used directly to do any inference? What is rejection sampling? What is its major disadvantage?
4. Generative Adversarial Networks(GANs) include a generator and a discriminator. Sketch a basic GAN using those elements, a source of real images, and a source of randomness.
5. The word “adversarial” in the acronym for GANs suggests a two-player game. What are the two players, and what are their respective goals?

**Model Question Paper**

**QP CODE:**

**Reg No:** \_\_\_\_\_

**Name:** \_\_\_\_\_

**PAGES : 5**

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**SIXTH SEMESTER B.TECH DEGREE EXAMINATION (HONORS), MONTH & YEAR**

**Course Code: CST 396**

**Course Name: Advanced Topics in Machine Learning**

**Max.Marks:100**

**Duration: 3 Hours**

**PART A**

**Answer All Questions. Each Question Carries 3 Marks**

|    |                                                                                                                                                                                                                                                                      |  |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 1. | Suppose you have a dataset with $m = 1000000$ examples and $n = 200000$ features for each example. You want to use multivariate linear regression to fit the parameters to our data. Should you prefer gradient descent or the normal equation? Justify your answer. |  |
| 2. | Define Information gain? How is that different from Gain ratio? Give the advantage of using Gain ratio measure?                                                                                                                                                      |  |
| 3. | What is cluster analysis? Identify two applications where cluster analysis can be applied to multimedia data?                                                                                                                                                        |  |
| 4. | Given two objects represented by the tuples (22, 1, 42, 10) and (20, 0, 36, 8):<br>(i) Compute the Euclidean distance between the two objects.<br>(ii) Compute the Manhattan distance between the two objects.                                                       |  |
| 5. | Suppose there are three classifiers A,B and C. The (FPR, TPR) measures of the three classifiers are as follows – A (0, 1), B (1, 1) , C (1,0.5). Which can be considered as a perfect classifier? Justify your answer.                                               |  |
| 6. | How Bias-Variance Tradeoff affects machine learning algorithms?                                                                                                                                                                                                      |  |
| 7. | For a particular learning task, if the requirement of error parameter $\epsilon$ changes from 0.1 to 0.01. How many more samples will be required for probably approximately correct(PAC) learning?                                                                  |  |

## COMPUTER SCIENCE AND DESIGN

| 8.                                                                                |     | Suppose we have a hypothesis set that labels all points inside an interval $[a, b]$ as class 1. Find its Vapnik-Chervonenkis(VC)- dimension?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                  |   |   |   |   |   |   |   |   |   |            |

|           |     |                                                                                                                                                                                                                                                                                                                                      |     |
|-----------|-----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 16.       | (a) | What are ROC space and ROC curve in machine learning? In ROC space, which points correspond to perfect prediction, always positive prediction and always negative prediction? Why?                                                                                                                                                   | (4) |
|           | (b) | Given the following ROC Curve? Find the AUC?                                                                                                                                                                                                                                                                                         | (3) |
|           | (c) | How does random forest classifier work? Why is a random forest better than a decision tree?                                                                                                                                                                                                                                          | (7) |
| 17.       | (a) | Show that the concept class $C_n$ of the conjunction of boolean literals up to $n$ variables is probably approximately correct(PAC)-learnable.                                                                                                                                                                                       | (8) |
|           | (b) | Explain the concept of Vapnik-Chervonenkis (VC) dimension using shattering. How the number of training examples required to train the model is related to the VC dimension and what is its relation with training and test errors.                                                                                                   | (6) |
| <b>OR</b> |     |                                                                                                                                                                                                                                                                                                                                      |     |
| 18.       | (a) | Consider a Boolean classification problem with $n$ binary variables and a hypothesis space $H$ , where each hypothesis is a decision tree of depth 1. How many training examples, $m$ suffice to assure that with probability at least 0.99, any consistent learner using $H$ will output a hypothesis with true error at most 0.05? | (7) |
|           | (b) | Prove that $VC(H) \leq \log_2  H $ , where $H$ is a hypothesis space. ( $ H $ denotes the                                                                                                                                                                                                                                            | (7) |

**Preamble:**

The purpose of this course is to introduce Data Visualization and Open-Source Programming for IOT among learners. Concepts in this course help the learners to understand the visualization of data and programming required for IOT.

**Prerequisite:** Basic Concepts of IOT.

**Course Outcomes:** After the completion of the course the student will be able to

|             |                                                                                                                            |
|-------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>CO 1</b> | Summarize data visualization and analytics concepts for the IoT. (Knowledge Level: <b>Understand</b> ).                    |
| <b>CO 2</b> | Articulate various network analytics and edge streaming analytics in IOT. (Knowledge Level: <b>Understand</b> ).           |
| <b>CO 3</b> | Describe various IoT development boards. (Knowledge Level: <b>Understand</b> ).                                            |
| <b>CO 4</b> | Discuss data analysis and visualization using R programming and Python Programming. (Knowledge Level: <b>Understand</b> ). |
| <b>CO 5</b> | Use Visualization techniques of R and Python to plot data related with IOT. (Knowledge Level: <b>Apply</b> ).              |

**Assessment Pattern**

| Bloom's Category | Continuous Assessment Tests |        | End Semester Examination Marks |
|------------------|-----------------------------|--------|--------------------------------|
|                  | Test 1                      | Test 2 |                                |
| Remember         | 20%                         | 20%    | 20%                            |
| Understand       | 40%                         | 40%    | 40%                            |
| Apply            | 40%                         | 40%    | 40%                            |
| Analyse          |                             |        |                                |
| Evaluate         |                             |        |                                |
| Create           |                             |        |                                |

**Mark Distribution**

| <b>Total Marks</b> | <b>CIE Marks</b> | <b>ESE Marks</b> | <b>ESE Duration</b> |
|--------------------|------------------|------------------|---------------------|
| <b>150</b>         | <b>50</b>        | <b>100</b>       | <b>3 hours</b>      |

**Continuous Internal Evaluation Pattern:**

Attendance : 10 marks

Continuous Assessment Tests : 25 marks

Continuous Assessment Assignment : 15 marks

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. First Internal Examination shall be preferably conducted after completing the first half of the syllabus and the Second Internal Examination shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly covered module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly covered module), each with 7 marks. Out of the 7 questions in Part B, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer anyone. Each question can have a maximum of 2 subdivisions and carries 14 marks.

## Syllabus

**Module 1 (Data visualization and Analytics for IoT).** 9 hours

An Introduction to Data Analytics for IoT, Structured Versus Unstructured Data, Data in Motion Versus Data at Rest, IoT Data Analytics Overview, IoT Data Analytics Challenges, Machine Learning and Getting Intelligence from Big Data, Predictive Analytics. Types of data visualization techniques (e.g., bar charts, line charts, scatter plots, heatmaps), Choosing the right visualization technique for different types of data.

**Module 2 (Network Analytics).** 9 hours

Introduction to Network Analytics, Flexible NetFlow Architecture, FNF Components, Flexible NetFlow in Multiservice IoT Networks. Big Data Analytics Tools and Technology, Massively Parallel Processing Databases. Edge Streaming Analytics, Comparing Big Data and Edge Analytics, Edge Analytics Core Functions, Distributed Analytics Systems.

**Module 3 (Development boards for IoT).** 9 hours

Development boards for IoT. NodeMCU, Arduino, Raspberry Pi, NVIDIA Jetson. ESP32. Introduction to platform IO IDE. IoT Network architecture and design. Challenges, Different IoT architecture. Example programs for reading sensor values - DHT11 and TLS2561.

**Module 4 (Data Visualization using R).** 8 hours

Perception and Data Visualization - Introduction to R, Data structures in R, vectors, array, matrix and data frame, Managing graphics in R, Graphical functions, Reading flat files and csv files in R. Plot the data. Scatter plots using gplot. Histogram and density plots.

**Module 5 (Data Visualization using Python).** 9 hours

Introduction to Numerical python(numpy) and pandas. Visualization with Matplotlib- Line plots, scatter plots and histogram plots. Customizing Matplotlib: Configurations and Stylesheets. Three-Dimensional Plotting in Matplotlib. Plotting DHT11 sensor data using matplotlib.

## Text Books

1. IoT Fundamentals: Networking Technologies, Protocols, and Use Cases for the Internet of Things" by David Hanes, Gonzalo Salgueiro, Patrick Grossetete, Robert Barton, Cisco Press.2017.
2. *Introduction to IoT*. Misra, S., Mukherjee, A., & Roy, A. (2021)
3. *Data Visualization: A Practical Introduction* , Kieran Healy
4. *Python Data Science Handbook: Essential Tools for Working with Data*" by Jake VanderPlas

## Sample Course Level Assessment Questions.

### Course Outcome 1 (CO1):

1. Explain various data visualization techniques.
2. In the context of data analytics in IOT explain the differences between structured and unstructured data.

### Course Outcome 2 (CO2):

1. Explain edge analytics processing unit.
2. What are IoT data analytics challenges? Explain.

### Course Outcome 3 (CO3):

1. Discuss the advantages and limitations of using the NVIDIA Jetson development board for IoT applications.
2. How the Raspberry Pi can be used as a development board for IoT projects? Explain.

### Course Outcome 4 (CO4):

1. Explain the importance of edges in data visualization and how they contribute to the perception of patterns and shapes.
2. Describe the characteristics of histogram and density plots in visualizing the distribution of data, including their ability to show frequency or probability density.
3. Explain the purpose and applications of three-dimensional (3D) plotting in data visualization.

### Course Outcome 5 (CO5):

1. Design an R or Python application that incorporates geolocation data from IoT devices. Use appropriate mapping libraries, such as leaflet (in R) or folium (in Python), to plot the IoT devices on a map and visualize their spatial distribution. Explore additional visualization techniques, such as clustering or heatmaps, to analyze spatial patterns in the IoT data.
2. Develop a Python script that integrates data from IoT devices with external data sources, such as weather data or social media feeds.

| <i>Answer any one Question from each module. Each question carries 14 Marks</i> |    |                                                                                                                                                             |     |
| 11                                                                              | a) | Explain edge analytics processing unit.                                                                                                                     | (4) |
|                                                                                 | b) | What are IoT data analytics challenges? Explain.                                                                                                            | (6) |
| <b>OR</b>                                                                       |    |                                                                                                                                                             |     |
| 12                                                                              | a) | Explain various types of data analysis results.                                                                                                             | (7) |
|                                                                                 | b) | Illustrates the four data analysis types and how they rank as complexity and value increase.                                                                | (7) |
| 13                                                                              | a) | Provide an example program using the DHT11 sensor to read temperature and humidity values in an IoT project.                                                | (7) |
|                                                                                 | b) | Explain in detail the common applications of ML for IoT.                                                                                                    | (7) |
| <b>OR</b>                                                                       |    |                                                                                                                                                             |     |
| 14                                                                              | a) | In the context of IoT infrastructure deployments and technologies, explain the benefits of flow analytics in addition to other network management services. | (6) |
|                                                                                 | b) | Illustrate field area network (FAN) traffic analytics performed on the aggregation router in a smart grid.                                                  | (8) |
| 15                                                                              | a) | Explain how NodeMCU is suitable for prototyping IoT projects and its programming language compatibility.                                                    | (8) |

|     |    |                                                                                                                                                                                                                                                                                    |     |
|-----|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
|     | b) | Describe the steps involved in setting up a new ESP32 project using Platform IO IDE                                                                                                                                                                                                | (6) |
|     |    | <b>OR</b>                                                                                                                                                                                                                                                                          |     |
| 16  | a) | Explain the steps involved in using the TLS2561 sensor to measure light intensity and retrieve the values in an IoT application.                                                                                                                                                   | (8) |
|     | b) | Compare and contrast the features and capabilities of NodeMCU, Arduino, Raspberry Pi, and NVIDIA Jetson as development boards for IoT.                                                                                                                                             | (6) |
| 17  | a) | Compare and contrast the advantages and limitations of different data formats (e.g., CSV, JSON, Excel) when importing data into R.                                                                                                                                                 | (6) |
|     | b) | Explain the steps involved in creating scatter plots using the "gplot" function in R, including specifying variables and customizing the plot.                                                                                                                                     | (8) |
|     |    | <b>OR</b>                                                                                                                                                                                                                                                                          |     |
| 18  | a) | Write an R program to read a csv file with two numeric columns and plot the data using scatter plot.                                                                                                                                                                               | (6) |
|     | b) | Design a comprehensive data visualization project for IoT data using R, considering multiple IoT devices or sensors. Incorporate features like interactive elements, data aggregation, or anomaly detection to enhance the usability and insights derived from the visualizations. | (8) |
| 19  | a) | Describe the main features of pandas library in Python and how it facilitates data analysis and manipulation through its DataFrame data structure.                                                                                                                                 | (8) |
|     | b) | Describe the steps involved in reading DHT11 sensor data into Python using appropriate libraries or modules.                                                                                                                                                                       | (6) |
|     |    | <b>OR</b>                                                                                                                                                                                                                                                                          |     |
| 20  | a) | Explain the purpose of line plots in data visualization and discuss how they can be used to represent trends or patterns over time or continuous variables.                                                                                                                        | (8) |
|     | b) | Discuss the different types of 3D plots available in Matplotlib                                                                                                                                                                                                                    | (6) |
| *** |    |                                                                                                                                                                                                                                                                                    |     |

# COMMON COURSES

(S5 & S6)

| MCN<br>301 | DISASTER<br>MANAGEMENT | Category        | L | T | P | CREDIT | YEAR OF<br>INTRODUCTION |
|------------|------------------------|-----------------|---|---|---|--------|-------------------------|
|            |                        | Non -<br>Credit | 2 | 0 | 0 | Nil    | 2019                    |

**Preamble:** The objective of this course is to introduce the fundamental concepts of hazards and disaster management.

**Prerequisite:** Nil

**Course Outcomes:** After the completion of the course the student will be able to

|     |                                                                                                                                                                                                            |
|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO1 | Define and use various terminologies in use in disaster management parlance and organise each of these terms in relation to the disaster management cycle (Cognitive knowledge level: <b>Understand</b> ). |
| CO2 | Distinguish between different hazard types and vulnerability types and do vulnerability assessment (Cognitive knowledge level: <b>Understand</b> ).                                                        |
| CO3 | Identify the components and describe the process of risk assessment, and apply appropriate methodologies to assess risk (Cognitive knowledge level: <b>Understand</b> ).                                   |
| CO4 | Explain the core elements and phases of Disaster Risk Management and develop possible measures to reduce disaster risks across sector and community (Cognitive knowledge level: <b>Apply</b> )             |
| CO5 | Identify factors that determine the nature of disaster response and discuss the various disaster response actions (Cognitive knowledge level: <b>Understand</b> ).                                         |
| CO6 | Explain the various legislations and best practices for disaster management and risk reduction at national and international level (Cognitive knowledge level: <b>Understand</b> ).                        |

### Assessment Pattern

| Bloom's Category | Continuous Assessment Tests |                | End Semester Examination Marks |
|------------------|-----------------------------|----------------|--------------------------------|
|                  | Test 1 (Marks)              | Test 2 (Marks) |                                |
| Remember         | 10                          | 10             | 20                             |
| Understand       | 25                          | 25             | 50                             |
| Apply            | 15                          | 15             | 30                             |
| Analyze          |                             |                |                                |
| Evaluate         |                             |                |                                |
| Create           |                             |                |                                |

### Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 hours      |

### Continuous Internal Evaluation Pattern:

Attendance : 10 marks

Continuous Assessment - Test : 25 marks

Continuous Assessment - Assignment : 15 marks

### Internal Examination Pattern:

Each of the two internal examinations has to be conducted out of 50 marks. First series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A.

Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 2 sub-divisions and carries 14 marks.

## **SYLLABUS**

### **MCN 301 Disaster Management**

#### **Module 1**

Systems of earth

Lithosphere- composition, rocks, soils; Atmosphere-layers, ozone layer, greenhouse effect, weather, cyclones, atmospheric circulations, Indian Monsoon; hydrosphere- Oceans, inland water bodies; biosphere

Definition and meaning of key terms in Disaster Risk Reduction and Management- disaster, hazard, exposure, vulnerability, risk, risk assessment, risk mapping, capacity, resilience, disaster risk reduction, disaster risk management, early warning systems, disaster preparedness, disaster prevention, disaster mitigation, disaster response, damage assessment, crisis counselling, needs assessment.

#### **Module 2**

Hazard types and hazard mapping; Vulnerability types and their assessment- physical, social, economic and environmental vulnerability.

Disaster risk assessment –approaches, procedures

#### **Module 3**

Disaster risk management -Core elements and phases of Disaster Risk Management

Measures for Disaster Risk Reduction – prevention, mitigation, and preparedness.

Disaster response- objectives, requirements; response planning; types of responses.

Relief; international relief organizations.

#### **Module 4**

Participatory stakeholder engagement; Disaster communication- importance, methods, barriers; Crisis counselling

Capacity Building: Concept – Structural and Non-structural Measures, Capacity Assessment; Strengthening Capacity for Reducing Risk

## **Module 5**

Common disaster types in India; Legislations in India on disaster management; National disaster management policy; Institutional arrangements for disaster management in India.

The Sendai Framework for Disaster Risk Reduction- targets, priorities for action, guiding principles

### **Reference Text Book**

1. R. Subramanian, Disaster Management, Vikas Publishing House, 2018
2. M. M. Sulphrey, Disaster Management, PHI Learning, 2016
3. UNDP, Disaster Risk Management Training Manual, 2016
4. United Nations Office for Disaster Risk Reduction, Sendai Framework for Disaster Risk Reduction 2015-2030, 2015

### **Sample Course Level Assessment Questions**

#### **Course Outcome 1 (CO1):**

1. What is the mechanism by which stratospheric ozone protects earth from harmful UV rays?
2. What are disasters? What are their causes?
3. Explain the different types of cyclones and the mechanism of their formation
4. Explain with examples, the difference between hazard and risk in the context of disaster management
5. Explain the following terms in the context of disaster management (a) exposure (b) resilience (c) disaster risk management (d) early warning systems, (e) damage assessment (f) crisis counselling (g) needs assessment

#### **Course Outcome 2 (CO2):**

1. What is hazard mapping? What are its objectives?
2. What is participatory hazard mapping? How is it conducted? What are its advantages?
3. Explain the applications of hazard maps
4. Explain the types of vulnerabilities and the approaches to assess them

#### **Course Outcome 3 (CO3):**

1. Explain briefly the concept of 'disaster risk'

2. List the strategies for disaster risk management ‘before’, ‘during’ and ‘after’ a disaster
3. What is disaster preparedness? Explain the components of a comprehensive disaster preparedness strategy

**Course Outcome 4 (CO4):**

1. What is disaster prevention? Distinguish it from disaster mitigation giving examples
2. What are the steps to effective disaster communication? What are the barriers to communication?
3. Explain capacity building in the context of disaster management

**Course Outcome 5 (CO5):**

1. Briefly explain the levels of stakeholder participation in the context of disaster risk reduction
2. Explain the importance of communication in disaster management
3. Explain the benefits and costs of stakeholder participation in disaster management
4. How are stakeholders in disaster management identified?

**Course Outcome 6 (CO6):**

1. Explain the salient features of the National Policy on Disaster Management in India
2. Explain the guiding principles and priorities of action according to the Sendai Framework for Disaster Risk Reduction
3. What are Tsunamis? How are they caused?
4. Explain the earthquake zonation of India

**Model Question paper**

**QP CODE:**

**PAGES:3**

**Reg No:** \_\_\_\_\_

**Name :** \_\_\_\_\_

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**FIFTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: MCN 301**

**Course Name: Disaster Management**

**Max.Marks:100**

**Duration: 3 Hours**

**PART A**

**Answer all Questions. Each question carries 3 Marks**

1. What is the mechanism by which stratospheric ozone protects earth from harmful UV rays?
2. What are disasters? What are their causes?
3. What is hazard mapping? What are its objectives?
4. Explain briefly the concept of 'disaster risk'
5. List the strategies for disaster risk management 'before', 'during' and 'after' a disaster
6. What is disaster prevention? Distinguish it from disaster mitigation giving examples
7. Briefly explain the levels of stakeholder participation in the context of disaster risk reduction
8. Explain the importance of communication in disaster management
9. What are Tsunamis? How are they caused?
10. Explain the earthquake zonation of India

**Part B**

**Answer any one Question from each module. Each question carries 14 Marks**

11. a. Explain the different types of cyclones and the mechanism of their formation [10]  
b. Explain with examples, the difference between hazard and risk in the context of disaster management [4]

OR

12. Explain the following terms in the context of disaster management [14]  
(a) exposure (b) resilience (c) disaster risk management (d) early warning systems, (e) damage assessment (f) crisis counselling (g) needs assessment

13. a. What is participatory hazard mapping? How is it conducted? What are its advantages? [8]  
b. Explain the applications of hazard maps [6]

OR

14. Explain the types of vulnerabilities and the approaches to assess them [14]  
15. a. Explain the core elements of disaster risk management [8]  
b. Explain the factors that decide the nature of disaster response [6]

OR

16. a. What is disaster preparedness? Explain the components of a comprehensive disaster preparedness strategy [6]  
b. Explain the different disaster response actions [8]  
17. a. Explain the benefits and costs of stakeholder participation in disaster management [10]  
b. How are stakeholders in disaster management identified? [4]

OR

18. a. What are the steps to effective disaster communication? What are the barriers to communication? [7]  
b. Explain capacity building in the context of disaster management [7]

19. Explain the salient features of the National Policy on Disaster Management in India

[14]

OR

20. Explain the guiding principles and priorities of action according to the Sendai Framework for Disaster Risk Reduction

[14]

## Teaching Plan

|     | <b>Module 1</b>                                                                                                                                              | <b>5 Hours</b> |
|-----|--------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| 1.1 | Introduction about various Systems of earth, Lithosphere-composition, rocks, Soils; Atmosphere-layers, ozone layer, greenhouse effect, weather               | 1 Hour         |
| 1.2 | Cyclones, atmospheric circulations, Indian Monsoon; hydrosphere-Oceans, inland water bodies; biosphere                                                       | 1 Hour         |
| 1.3 | Definition and meaning of key terms in Disaster Risk Reduction and Management- disaster, hazard,                                                             | 1 Hour         |
| 1.4 | Exposure, vulnerability, risk, risk assessment, risk mapping, capacity, resilience, disaster risk reduction, Disaster risk management, early warning systems | 1 Hour         |
| 1.5 | Disaster preparedness, disaster prevention, disaster, Mitigation, disaster response, damage assessment, crisis counselling, needs assessment.                | 1 Hour         |
|     | <b>Module 2</b>                                                                                                                                              | <b>5 Hours</b> |
| 2.1 | Various Hazard types, Hazard mapping; Different types of Vulnerability types and their assessment                                                            | 1 Hour         |
| 2.2 | Vulnerability assessment and types, Physical and social vulnerability                                                                                        | 1 Hour         |
| 2.3 | Economic and environmental vulnerability, Core elements of disaster risk assessment                                                                          | 1 Hour         |
| 2.4 | Components of a comprehensive disaster preparedness strategy approaches, procedures                                                                          | 1 Hour         |
| 2.5 | Different disaster response actions                                                                                                                          | 1 Hour         |
|     | <b>Module 3</b>                                                                                                                                              | <b>5 Hours</b> |
| 3.1 | Introduction to Disaster risk management, Core elements of Disaster Risk Management                                                                          | 1 Hour         |
| 3.2 | Phases of Disaster Risk Management, Measures for Disaster Risk Reduction                                                                                     | 1 Hour         |
| 3.3 | Measures for Disaster prevention, mitigation, and preparedness.                                                                                              | 1 Hour         |

|     |                                                                                                     |                |
|-----|-----------------------------------------------------------------------------------------------------|----------------|
| 3.4 | Disaster response- objectives, requirements. Disaster response planning; types of responses.        | 1 Hour         |
| 3.5 | Introduction- Disaster Relief, Relief; international relief organizations.                          | 1 Hour         |
|     | <b>Module 4</b>                                                                                     | <b>5 Hours</b> |
| 4.1 | Participatory stakeholder engagement                                                                | 1 Hour         |
| 4.2 | Importance of disaster communication.                                                               | 1 Hour         |
| 4.3 | Disaster communication- methods, barriers. Crisis counselling                                       | 1 Hour         |
| 4.4 | Introduction to Capacity Building. Concept – Structural Measures, Non-structural Measures.          | 1 Hour         |
| 4.5 | Introduction to Capacity Assessment, Capacity Assessment; Strengthening, Capacity for Reducing Risk | 1 Hour         |
|     | <b>Module 5</b>                                                                                     | <b>5 Hours</b> |
| 5.1 | Introduction-Common disaster types in India.                                                        | 1 Hour         |
| 5.2 | Common disaster legislations in India on disaster management                                        | 1 Hour         |
| 5.3 | National disaster management policy, Institutional arrangements for disaster management in India.   | 1 Hour         |
| 5.4 | The Sendai Framework for Disaster Risk Reduction and targets                                        | 1 Hour         |
| 5.5 | The Sendai Framework for Disaster Risk Reduction-priorities for action, guiding principles          | 1 Hour         |

|                |                                                 |                 |          |          |          |               |
|----------------|-------------------------------------------------|-----------------|----------|----------|----------|---------------|
| <b>HUT 300</b> | <b>Industrial Economics &amp; Foreign Trade</b> | <b>Category</b> | <b>L</b> | <b>T</b> | <b>P</b> | <b>CREDIT</b> |
|                |                                                 | HSMC            | <b>3</b> | <b>0</b> | <b>0</b> | <b>3</b>      |

**Preamble:** To equip the students to take industrial decisions and to create awareness of economic environment.

**Prerequisite:** Nil

**Course Outcomes:** After the completion of the course the student will be able to

|            |                                                                                                                                                                                                         |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CO1</b> | Explain the problem of scarcity of resources and consumer behaviour, and to evaluate the impact of government policies on the general economic welfare. (Cognitive knowledge level: <b>Understand</b> ) |
| <b>CO2</b> | Take appropriate decisions regarding volume of output and to evaluate the social cost of production. (Cognitive knowledge level: <b>Apply</b> )                                                         |
| <b>CO3</b> | Determine the functional requirement of a firm under various competitive conditions. (Cognitive knowledge level: <b>Analyse</b> )                                                                       |
| <b>CO4</b> | Examine the overall performance of the economy, and the regulation of economic fluctuations and its impact on various sections in the society. (Cognitive knowledge level: <b>Analyse</b> )             |
| <b>CO5</b> | Determine the impact of changes in global economic policies on the business opportunities of a firm. (Cognitive knowledge level: <b>Analyse</b> )                                                       |

#### **Assessment Pattern**

| <b>Bloom's Category</b> | <b>Continuous Assessment Tests</b> |                       | <b>End Semester Examination Marks</b> |
|-------------------------|------------------------------------|-----------------------|---------------------------------------|
|                         | <b>Test 1 (Marks)</b>              | <b>Test 2 (Marks)</b> |                                       |
| Remember                | <b>15</b>                          | <b>15</b>             | <b>30</b>                             |
| Understand              | <b>20</b>                          | <b>20</b>             | <b>40</b>                             |
| Apply                   | <b>15</b>                          | <b>15</b>             | <b>30</b>                             |

#### **Mark Distribution**

| <b>Total Marks</b> | <b>CIE Marks</b> | <b>ESE Marks</b> | <b>ESE Duration</b> |
|--------------------|------------------|------------------|---------------------|
| <b>150</b>         | <b>50</b>        | <b>100</b>       | <b>3 hours</b>      |

**Continuous Internal Evaluation Pattern:**

|                                          |            |
|------------------------------------------|------------|
| Attendance                               | : 10 marks |
| Continuous Assessment - Test (2 numbers) | : 25 marks |
| Continuous Assessment - Assignment       | : 15 marks |

**Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 50 marks. First series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

**End Semester Examination Pattern:**

There will be two parts; Part A and Part B.

Part A : 30 marks

Part B : 70 marks

Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 3 sub-divisions and carries 14 marks.

## **SYLLABUS**

### **HUT 300 Industrial Economics & Foreign Trade**

#### **Module 1 (Basic Concepts and Demand and Supply Analysis)**

Scarcity and choice - Basic economic problems- PPC – Firms and its objectives – types of firms – Utility – Law of diminishing marginal utility – Demand and its determinants – law of demand – elasticity of demand – measurement of elasticity and its applications – Supply, law of supply and determinants of supply – Equilibrium – Changes in demand and supply and its effects – Consumer surplus and producer surplus (Concepts) – Taxation and deadweight loss.

#### **Module 2 (Production and cost)**

Production function – law of variable proportion – economies of scale – internal and external economies – Isoquants, isocost line and producer's equilibrium – Expansion path – Technical progress and its implications – Cobb-Douglas production function - Cost concepts – Social cost: private cost and external cost – Explicit and implicit cost – sunk cost - Short run cost curves - long run cost curves – Revenue (concepts) – Shutdown point – Break-even point.

#### **Module 3 (Market Structure)**

Perfect and imperfect competition – monopoly, regulation of monopoly, monopolistic competition (features and equilibrium of a firm) – oligopoly – Kinked demand curve – Collusive oligopoly (meaning) – Non-price competition – Product pricing – Cost plus pricing – Target return pricing – Penetration pricing – Predatory pricing – Going rate pricing – Price skimming.

#### **Module 4 (Macroeconomic concepts)**

Circular flow of economic activities – Stock and flow – Final goods and intermediate goods - Gross Domestic Product - National Income – Three sectors of an economy- Methods of measuring national income – Inflation- causes and effects – Measures to control inflation- Monetary and fiscal policies – Business financing- Bonds and shares -Money market and Capital market – Stock market – Demat account and Trading account - SENSEX and NIFTY.

#### **Module 5 (International Trade)**

Advantages and disadvantages of international trade - Absolute and Comparative advantage theory - Heckscher - Ohlin theory - Balance of payments – Components – Balance of Payments

deficit and devaluation – Trade policy – Free trade versus protection – Tariff and non-tariff barriers.

2. Gregory N Mankiw, 'Principles of Macro Economics', Cengage Publications
3. Dwivedi D N, 'Macro Economics', Tata McGraw Hill, New Delhi.
4. Mithani D M, 'Managerial Economics', Himalaya Publishing House, Mumbai.
5. Francis Cherunilam, 'International Economics', McGraw Hill, New Delhi.

### **Sample Course Level Assessment Questions**

#### **Course Outcome 1 (CO1):**

1. Why does the problem of choice arise?
2. What are the central problems?
3. How do we solve the basic economic problems?
4. What is the relation between price and demand?
5. Explain deadweight loss due to the imposition of a tax.

#### **Course Outcome 2 (CO2):**

1. What is shutdown point?
2. What do you mean by producer equilibrium?
3. Explain break-even point;
4. Suppose a chemical factory is functioning in a residential area. What are the external costs?

#### **Course Outcome 3 (CO3):**

1. Explain the equilibrium of a firm under monopolistic competition.
2. Why is a monopolist called price maker?
3. What are the methods of non-price competition under oligopoly?

4. What is collusive oligopoly?

**Course Outcome 4 (CO4):**

1. What is the significance of national income estimation?
2. How is GDP estimated?
3. What are the measures to control inflation?
4. How does inflation affect fixed income group and wage earners?

**Course Outcome 5 (CO5):**

1. What is devaluation?
2. Suppose a foreign country imposes a tariff on Indian goods. How does it affect India's exports?
3. What is free trade?
4. What are the arguments in favour of protection?

**Model Question paper**

**QP CODE:**

**PAGES:3**

**Reg No:** \_\_\_\_\_

**Name :** \_\_\_\_\_

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY FIFTH /SIXTH SEMESTER  
B.TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: HUT 300**

**Course Name: Industrial Economics & Foreign Trade**

**Max.Marks:100**

**Duration: 3 Hours**

**PART A**

**Answer all Questions. Each question carries 3 Marks**

1. Why does an economic problem arise?
2. What should be the percentage change in price of a product if the sale is to be increased by 50 percent and its price elasticity of demand is 2?
3. In the production function  $Q = 2L^{1/2}K^{1/2}$  if  $L=36$  how many units of capital are needed to produce 60 units of output?
4. Suppose in the short run  $AVC < P < AC$ . Will this firm produce or shut down? Give reason.
5. What is predatory pricing?
6. What do you mean by non- price competition under oligopoly?
7. What are the important economic activities under primary sector?
8. Distinguish between a bond and share?
9. What are the major components of balance of payments?

10. What is devaluation?

(10 x 3 = 30 marks)

### **PART B**

**(Answer one full question from each module, each question carries 14 marks)**

#### **MODULE I**

11. a) Prepare a utility schedule showing units of consumption, total utility and marginal utility, and explain the law of diminishing marginal utility. Point out any three limitations of the law.
- b) How is elasticity of demand measured according to the percentage method? How is the measurement of elasticity of demand useful for the government?

**Or**

12. a) Explain the concepts consumer surplus and producer surplus.
- b) Suppose the government imposes a tax on a commodity where the tax burden met by the consumers. Draw a diagram and explain dead weight loss. Mark consumer surplus, producer surplus, tax revenue and dead weight loss in the diagram.

#### **MODULE II**

13. a) What are the advantages of large-scale production?
- b) Explain Producer equilibrium with the help of isoquants and isocost line. What is expansion path?

**Or**

14. a) Explain break-even analysis with the help of a diagram.
- b) Suppose the monthly fixed cost of a firm is Rs. 40000 and its monthly total variable cost is Rs. 60000.
- If the monthly sales is Rs. 120000 estimate contribution and break-even sales.
  - If the firm wants to get a monthly profit of Rs.40000, what should be the sales?
- c) The total cost function of a firm is given as  $TC=100+50Q - 11Q^2+Q^3$ . Find marginal cost when output equals 5 units.

#### **MODULE III**

15. a) What are the features of monopolistic competition?  
b) Explain the equilibrium of a firm earning supernormal profit under monopolistic competition.

**Or**

16. a) Make comparison between perfect competition and monopoly.  
b) Explain price rigidity under oligopoly with the help of a kinked demand curve.

#### **MODULE IV**

17. a) How is national income estimated under product method and expenditure method?  
b) Estimate GDPmp, GNPmp and National income

|                                 |                       |
|---------------------------------|-----------------------|
| Private consumption expenditure | = 2000 (in 000 cores) |
| Government Consumption          | = 500                 |
| NFIA                            | = -(300)              |
| Investment                      | = 800                 |
| Net=exports                     | =700                  |
| Depreciation                    | = 400                 |
| Net-indirect tax                | = 300                 |

**Or**

18. a) What are the monetary and fiscal policy measures to control inflation?  
b) What is SENSEX?

#### **MODULE V**

19. a) What are the advantages of disadvantages of foreign trade?  
b) Explain the comparative cost advantage.

**Or**

20. a) What are the arguments in favour protection?  
b) Examine the tariff and non-tariff barriers to international trade.

**(5 × 14 = 70 marks)**

### Teaching Plan

| <b>Module 1 (Basic concepts and Demand and Supply Analysis)</b> |                                                                                                                  | <b>7 Hours</b> |
|-----------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|----------------|
| 1.1                                                             | Scarcity and choice – Basic economic problems - PPC                                                              | 1 Hour         |
| 1.2                                                             | Firms and its objectives – types of firms                                                                        | 1 Hour         |
| 1.3                                                             | Utility – Law of diminishing marginal utility – Demand – law of demand                                           | 1 Hour         |
| 1.4                                                             | Measurement of elasticity and its applications                                                                   | 1 Hour         |
| 1.5                                                             | Supply, law of supply and determinants of supply                                                                 | 1 Hour         |
| 1.6                                                             | Equilibrium – changes in demand and supply and its effects                                                       | 1 Hour         |
| 1.7                                                             | Consumer surplus and producer surplus (Concepts) – Taxation and deadweight loss.                                 | 1 Hour         |
| <b>Module 2 (Production and cost)</b>                           |                                                                                                                  | <b>7 Hours</b> |
| 2.1                                                             | Productions function – law of variable proportion                                                                | 1 Hour         |
| 2.2                                                             | Economies of scale – internal and external economies                                                             | 1 Hour         |
| 2.3                                                             | producers equilibrium – Expansion path                                                                           | 1 Hour         |
| 2.4                                                             | Technical progress and its implications – cob Douglas Production function                                        | 1 Hour         |
| 2.5                                                             | Cost concepts – social cost: private cost and external cost – Explicit and implicit cost – sunk cost             | 1 Hour         |
| 2.6                                                             | Short run cost curves & Long run cost curves                                                                     | 1 Hour         |
| 2.7                                                             | Revenue (concepts) – shutdown point – Break-even point.                                                          | 1 Hour         |
| <b>Module 3 (Market Structure)</b>                              |                                                                                                                  | <b>6 hours</b> |
| 3.1                                                             | Equilibrium of a firm, MC – MR approach and TC – TR approach                                                     | 1 Hour         |
| 3.2                                                             | Perfect competition & Imperfect competition                                                                      | 1 Hour         |
| 3.3                                                             | Monopoly – Regulation of monopoly – Monopolistic competition                                                     | 1 Hour         |
| 3.4                                                             | Oligopoly – kinked demand curve                                                                                  | 1 Hour         |
| 3.5                                                             | Collusive oligopoly (meaning) – Non price competition                                                            | 1 Hour         |
| 3.6                                                             | Cost plus pricing – Target return pricing – Penetration, Predatory pricing – Going rate pricing – price skimming | 1 Hour         |

| <b>Module 4 (Macroeconomic concepts)</b> |                                                                                                                              | <b>7 Hours</b> |
|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|----------------|
| 4.1                                      | Circular flow of economic activities                                                                                         | 1 Hour         |
| 4.2                                      | Stock and flow – Final goods and intermediate goods – Gross Domestic Product - National income – Three sectors of an economy | 1 Hour         |
| 4.3                                      | Methods of measuring national income                                                                                         | 1 Hour         |
| 4.4                                      | Inflation – Demand pull and cost push – Causes and effects                                                                   | 1 Hour         |
| 4.5                                      | Measures to control inflation – Monetary and fiscal policies                                                                 | 1 Hour         |
| 4.6                                      | Business financing – Bonds and shares – Money market and capital market                                                      | 1 Hour         |
| 4.7                                      | Stock market – Demat account and Trading account – SENSEX and NIFTY                                                          | 1 Hour         |
| <b>Module 5 (International Trade)</b>    |                                                                                                                              | <b>8 Hours</b> |
| 5.1                                      | Advantages and disadvantages of international trade                                                                          | 1 Hour         |
| 5.2                                      | Absolute and comparative advantage theory                                                                                    | 2 Hour         |
| 5.3                                      | Heckscher – Ohlin theory                                                                                                     | 1 Hour         |
| 5.4                                      | Balance of payments - components                                                                                             | 1 Hour         |
| 5.5                                      | Balance of payments deficit and devaluation                                                                                  | 1 Hour         |
| 5.6                                      | Trade policy – Free trade versus protection                                                                                  | 1 Hour         |
| 5.7                                      | Tariff and non tariff barriers.                                                                                              | 1 Hour         |

|                    |                                 |                 |          |          |          |               |

**Preamble:** This course is intended to help the students to learn the basic concepts and functions of management and its role in the performance of an organization and to understand various decision-making approaches available for managers to achieve excellence. Learners shall have a broad view of different functional areas of management like operations, human resource, finance and marketing.

**Prerequisite:** Nil

**Course Outcomes** After the completion of the course the student will be able to

|            |                                                                                                                           |
|------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>CO1</b> | Explain the characteristics of management in the contemporary context (Cognitive Knowledge level: <b>Understand</b> ).    |
| <b>CO2</b> | Describe the functions of management (Cognitive Knowledge level: <b>Understand</b> ).                                     |
| <b>CO3</b> | Demonstrate ability in decision making process and productivity analysis (Cognitive Knowledge level: <b>Understand</b> ). |
| <b>CO4</b> | Illustrate project management technique and develop a project schedule (Cognitive Knowledge level: <b>Apply</b> ).        |
| <b>CO5</b> | Summarize the functional areas of management (Cognitive Knowledge level: <b>Understand</b> ).                             |
| <b>CO6</b> | Comprehend the concept of entrepreneurship and create business plans (Cognitive Knowledge level: <b>Understand</b> ).     |

### Mapping of course outcomes with program outcomes

| PO6                                                     | The Engineer and Society                   |  | PO12 | Life long learning             |

### Assessment Pattern

| Bloom's Category | Test 1 (Marks in percentage) | Test 2 (Marks in percentage) | End Semester Examination (Marks in percentage) |
|------------------|------------------------------|------------------------------|------------------------------------------------|
| Remember         | 15                           | 15                           | 30                                             |
| Understand       | 15                           | 15                           | 30                                             |
| Apply            | 20                           | 20                           | 40                                             |
| Analyse          |                              |                              |                                                |
| Evaluate         |                              |                              |                                                |
| Create           |                              |                              |                                                |

### Mark Distribution

| Total Marks | CIE Marks | ESE Marks | ESE Duration |
|-------------|-----------|-----------|--------------|
| 150         | 50        | 100       | 3 Hours      |

### Continuous Internal Evaluation Pattern:

Attendance : 10 marks

Continuous Assessment - Test : 25 marks

Continuous Assessment - Assignment : 15 marks

### Internal Examination Pattern:

Each of the two internal examinations has to be conducted out of 50 marks. First series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

### End Semester Examination Pattern:

There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which a student should answer any one. Each question can have maximum 2 sub-divisions and carries 14 marks.

## **SYLLABUS**

### **HUT 310 Management for Engineers (35 hrs)**

#### **Module 1 (Introduction to management Theory- 7 Hours)**

Introduction to management theory, Management Defined, Characteristic of Management, Management as an art-profession, System approaches to Management, Task and Responsibilities of a professional Manager, Levels of Manager and Skill required.

#### **Module 2 (management and organization- 5 hours)**

Management Process, Planning types , Mission, Goals, Strategy, Programmes, Procedures, Organising, Principles of Organisation, Delegation, Span of Control, Organisation Structures, Directing, Leadership, Motivation, Controlling..

#### **Module 3 (productivity and decision making- 7 hours)**

Concept of productivity and its measurement; Competitiveness; Decision making process; decision making under certainty, risk and uncertainty; Decision trees; Models of decision making.

#### **Module 4 (project management- 8 hours)**

Project Management, Network construction, Arrow diagram, Redundancy. CPM and PERT Networks, Scheduling computations, PERT time estimates, Probability of completion of project, Introduction to crashing.

#### **Module 5 (functional areas of management- 8 hours)**

Introduction to functional areas of management, Operations management, Human resources management, Marketing management, Financial management, Entrepreneurship, Business plans, Corporate social responsibility, Patents and Intellectual property rights.

### **Sample Course Level Assessment Questions**

**Course Outcome1 (CO1):** Explain the systems approach to management?

**Course Outcome 2 (CO2):** Explain the following terms with a suitable example Goal, Objective, and Strategy.

**Course Outcome 3 (CO3):** Mr. Shyam is the author of what promises to be a successful novel. He has the option to either publish the novel himself or through a publisher. The publisher is offering Mr. Shyam Rs. 20,000 for signing the contract. If the novel is successful, it will sell 200,000 copies. Else, it will sell 10,000 copies only. The publisher pays a Re. 1 royalty per copy. A market survey indicates that there is a 70% chance that the novel will be successful. If Mr. Shyam undertakes publishing, he will incur an initial cost of Rs. 90,000 for printing and marketing., but each copy sold will net him Rs. 2. Based on the given information and the

decision analysis method, determine whether Mr. Shyam should accept the publisher's offer or publish the novel himself.

**Course Outcome 4 (CO4):** Explain the concepts of crashing and dummy activity in project management.

**Course Outcome 5 (CO5):** Derive the expression for the Economic order quantity (EOQ)?

**Course Outcome 6 (CO6):** Briefly explain the theories of Entrepreneurial motivation.?

**Model Question Paper**

QP CODE:

PAGES: 4

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

**APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY  
FOURTH SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR**

**Course Code: HUT 310**

**Course name: Management for Engineers**

**Max Marks: 100**

**Duration: 3 Hours**

**PART-A (Answer All Questions. Each question carries 3 marks)**

1. "Management is getting things done through other." Elaborate.
2. Comment on the true nature of management. Is it a science or an art?
3. Planning is looking ahead and controlling is looking back. Comment with suitable examples
4. Explain the process of communication?
5. Explain the hierarchy of objectives?
6. Explain the types of decisions?
7. Describe the Economic man model?
8. Explain the concepts of crashing and dummy activity in project management.
9. Differentiate the quantitative and qualitative methods in forecasting.
10. What are the key metrics for sustainability measurement? What makes the measurement and reporting of sustainability challenging?

**PART-B (Answer any one question from each module)**

11. a) Explain the systems approach to management. **(10)**  
b) Describe the roles of a manager **(4)**

**OR**

12. a) Explain the 14 principles of administrative management? **(10)**

b) Explain the different managerial skills **(4)**

13. a) What are planning premises, explain the classification of planning premises. **(10)**

b) Distinguish between strategy and policy. How can policies be made effective. **(4)**

**OR**

14 a) Explain three motivational theories. **(9)**

b) Describe the managerial grid. **(5)**

15. a) Modern forest management uses controlled fires to reduce fire hazards and to stimulate new forest growth. Management has the option to postpone or plan a burning. In a specific forest tract, if burning is postponed, a general administrative cost of Rs. 300 is incurred. If a controlled burning is planned, there is a 50% chance that good weather will prevail and burning will cost Rs. 3200. The results of the burning may be either successful with probability 0.6 or marginal with probability 0.4. Successful execution will result in an estimated benefit of Rs. 6000, and marginal execution will provide only Rs. 3000 in benefits. If the weather is poor, burning will be cancelled incurring a cost of Rs. 1200 and no benefit. i) Develop a decision tree for the problem. (ii) Analyse the decision tree and determine the optimal course of action. **(8)**

**b)** Student tuition at ABC University is \$100 per semester credit hour. The Education department supplements the university revenue by matching student tuition, dollars per dollars. Average class size for typical three credit course is 50 students. Labour costs are \$4000 per class, material costs are \$20 per student, and overhead cost are \$25,000 per class. (a) Determine the total factor productivity. (b) If instructors deliver lecture 14 hours per week and the semester lasts for 16 weeks, what is the labour productivity? **(6)**

**OR**

16. a) An ice-cream retailer buys ice cream at a cost of Rs. 13 per cup and sells it for Rs. 20 per cup; any remaining unsold at the end of the day, can be disposed at a salvage price of Rs. 2.5 per cup. Past sales have ranged between 13 and 17 cups per day; there is no reason to believe that

sales volume will take on any other magnitude in future. Find the expected monetary value and EOL, if the sales history has the following probabilities:

(9)

|                    |      |      |      |      |      |
|--------------------|------|------|------|------|------|
| <b>Market Size</b> | 13   | 14   | 15   | 16   | 17   |
| <b>Probability</b> | 0.10 | 0.15 | 0.15 | 0.25 | 0.35 |

b) At Modern Lumber Company, Kishore the president and a producer of an apple crates sold to growers, has been able, with his current equipment, to produce 240 crates per 100 logs. He currently purchases 100 logs per day, and each log required 3 labour hours to process. He believes that he can hire a professional buyer who can buy a better quality log at the same cost. If this is the case, he increases his production to 260 crates per 100 logs. His labour hours will increase by 8 hours per day. What will be the impact on productivity (measured in crates per labour-hour) if the buyer is hired? What is the growth in productivity in this case?

(5)

17. a) A project has the following list of activities and time estimates:

| <b>Activity</b> | <b>Time (Days)</b> | <b>Immediate Predecessors</b> |
|-----------------|--------------------|-------------------------------|
| A               | 1                  | -                             |
| B               | 4                  | A                             |
| C               | 3                  | A                             |
| D               | 7                  | A                             |
| E               | 6                  | B                             |
| F               | 2                  | C, D                          |
| G               | 7                  | E, F                          |
| H               | 9                  | D                             |
| I               | 4                  | G, H                          |

(a) Draw the network. (b) Show the early start and early finish times. (c) Show the critical path. (10)

b) An opinion survey involves designing and printing questionnaires, hiring and training personnel, selecting participants, mailing questionnaires and analysing data. Develop the precedence relationships and construct the project network. **(4)**

**OR**

18. a) The following table shows the precedence requirements, normal and crash times, and normal and crash costs for a construction project:

| Activity | Immediate Predecessors | Required Time (Weeks) |       | Cost (Rs.) |        |
|----------|------------------------|-----------------------|-------|------------|--------|
|          |                        | Normal                | Crash | Normal     | Crash  |
| A        | -                      | 4                     | 2     | 10,000     | 11,000 |
| B        | A                      | 3                     | 2     | 6,000      | 9,000  |
| C        | A                      | 2                     | 1     | 4,000      | 6,000  |
| D        | B                      | 5                     | 3     | 14,000     | 18,000 |
| E        | B, C                   | 1                     | 1     | 9,000      | 9,000  |
| F        | C                      | 3                     | 2     | 7,000      | 8,000  |
| G        | E, F                   | 4                     | 2     | 13,000     | 25,000 |
| H        | D, E                   | 4                     | 1     | 11,000     | 18,000 |
| I        | H, G                   | 6                     | 5     | 20,000     | 29,000 |

Draw the network. (b) Determine the critical path. (c) Determine the optimal duration and the associated cost. **(10)**

b) Differentiate between CPM and PERT. **(4)**

19. a) What is meant by market segmentation and explain the process of market segmentation **(8)**

b) The Honda Co. in India has a division that manufactures two-wheel motorcycles. Its budgeted sales for Model G in 2019 are 80,00,000 units. Honda's target ending inventory is 10,00,000 units and its beginning inventory is 12,00,000 units. The company's budgeted selling price to its distributors and dealers is Rs. 40,000 per motorcycle. Honda procures all its wheels from an

outside supplier. No defective wheels are accepted. Honda's needs for extra wheels for replacement parts are ordered by a separate division of the company. The company's target ending inventory is 3,00,000 wheels and its beginning inventory is 2,00,000 wheels. The budgeted purchase price is Rs. 1,600 per wheel.

(a) Compute the budgeted revenue in rupees.

(b) Compute the number of motorcycles to be produced.

Compute the budgeted purchases of wheels in units and in rupees.? **(6)**

**OR**

20. a) a) "Human Resource Management policies and principles contribute to effectiveness, continuity and stability of the organization". Discuss. (b) What is a budget? Explain how sales budget and production budgets are prepared? **(10)**

b) Distinguish between the following: (a) Assets and Liabilities (b) Production concept and Marketing concept (c) Needs and Wants (d) Design functions and Operational control functions in operations **(4)**
